

National Capital Region  
**Transportation Planning Board**

## MEMORANDUM

**TO:** Mark S. Moran, Program Director, Travel Forecasting and Emissions Analysis, COG/TPB  
Feng Xie, Manager, Model Development, COG/TPB

**FROM:** Meseret Seifu, Principal Transportation Engineer, COG/TPB

**SUBJECT:** Transmittal Package: TPB Gen2/Ver. 2.4 Travel Demand Forecasting Model,  
Transportation Networks, and Land Use Data Associated with the Air Quality Conformity  
Analysis of the 2022 Update to Visualize 2045 with Revised Transit Networks

**DATE:** November 14, 2022

Rev\_Xmittal\_Ver2.4\_2022Upd\_Viz2045\_model\_and\_inputs\_v3.docx

---

## PURPOSE

This memorandum documents a transmittal package containing the latest National Capital Region Transportation Planning Board (TPB) production-use travel demand forecasting model (Gen2/Version 2.4 Travel Model) and its associated input files, i.e., zonal land use data and transportation network files (highway and transit networks). Note that the transit networks have been updated, compared to the previous transmittal package,<sup>1</sup> as is noted in the description below. The input data are from the Air Quality Conformity (AQC) Analysis of the 2022 Update to Visualize 2045, a Long-Range Transportation Plan (LRTP) for the National Capital Region, and the FY 2023-2026 Transportation Improvement Program (TIP). The TPB approved the AQC determination on June 15, 2022. Since the Ver. 2.4 Model was used for that analysis, it is now considered the adopted, production-use travel demand model.

The TPB is staffed by the Department of Transportation (DTP), at the Metropolitan Washington Council of Governments (COG). After the release of the latest Ver. 2.4 Model transmittal package, dated June 15, 2022, COG/TPB staff found a coding error in the transit network inputs files, which was associated with park-and-ride (PNR) and kiss-and-ride (KNR) access to some bus lines. This network coding error, referred to as the 15000-series node error, resulted in unneeded bus stop nodes in transit networks, which, in turn, resulted in reduced PNR and KNR bus trips in the travel model. COG/TPB staff have made the network corrections and conducted a sensitivity test to determine the impact of this error. Based on the sensitivity test, this error had a very marginal impact on regional travel metrics, such as VMT (+0.2%), and had no material effect on the Air Quality Conformity Determination results.

The previous Ver. 2.4 model/input file transmittal package (i.e., the 2020 update to the LRTP), dated March 17, 2021, did not have this error. However, the latest Ver. 2.4 model/input file transmittal package (i.e., the 2022 update to the LRTP), dated June 15, 2022, did have the error. Based on COG/TPB staff's assessment, this network coding error should not cause problems for model users who are using the Ver. 2.4 Model for a study that is focused on regional results or a highway.

---

<sup>1</sup> Meseret Seifu to Mark S. Moran and Feng Xie, "Transmittal Package: TPB Gen2/Ver. 2.4 Travel Demand Forecasting Model, Transportation Networks, and Land Use Data Associated with the Air Quality Conformity Analysis of the 2022 Update to Visualize 2045," Memorandum, June 15, 2022, <https://www.mwcog.org/transportation/data-and-tools/modeling/data-requests/>.

projects. However, the updated transmittal package with the corrected transit network input files, which is being transmitted along with this memorandum, is strongly recommended for transportation planning studies focused on transit, especially bus, and especially at the project level.

## **CONTENT OF THE MODEL TRANSMITTAL PACKAGE**

Model: The TPB's adopted, production-use travel demand forecasting model (Version 2.4) is an aggregate, trip-based, "four-step" travel demand model, which is derived from the Ver. 2.3 Model. Both the Ver. 2.3 and Ver. 2.4 models are members of the Generation 2 (Gen2) family of travel models. The Ver. 2.4 Travel Model covers a modeled area of 6,800 square miles, which is divided into 3,722 Transportation Analysis Zones (TAZs). Although the Gen2/Ver. 2.4 Model is offered for free by COG/TPB staff to those who request it,<sup>2</sup> to run the model, one must have a copy of the Cube Voyager travel demand modeling software package, which is sold by Bentley Systems, Inc.<sup>3</sup>

The TPB staff updates, with consultant assistance, its regional travel demand forecasting model on a regular basis. The Version 2.4 Travel Model was derived from the Version 2.3 Travel Model, which was calibrated and validated to year-2007 conditions.<sup>4</sup> It was later re-validated to both year-2010 and year-2014 conditions.<sup>5</sup> <sup>6</sup> The most recent validation, to year-2014 conditions, was conducted using the Ver. 2.4 Model in 2020.<sup>7</sup>

Please note that the Ver. 2.4 Model has already been released for production use since March 26, 2021.<sup>8</sup> However, the model was not considered an "adopted" model until its June 15, 2022 release, since, prior to the air quality conformity analysis of the 2022 update of Visualize 2045, the Ver. 2.4 Model had not been used in an analysis that was adopted by the TPB. The Ver. 2.4 Model transmittal package that has been provided to stakeholders between March 26, 2021, and June 14, 2022 included the same Ver. 2.4 Model, but the input data was from the older 2020 Amendment to Visualize 2045 network inputs and Round 9.1a Cooperative Forecasts of land use.

Transportation Networks: The AQC analysis of the 2022 Update to Visualize 2045 and the FY 2023-2026 TIP was conducted for six forecast years (**2021, 2023, 2025, 2030, 2040, and 2045**). In addition, the **2017** analysis year was included in the transmittal package to provide base-year network inputs with network adjustments/corrections that are consistent with forecast years, even though 2017 was not a year analyzed in the AQC analysis. Therefore, this transmittal package includes transportation networks representing seven years, with updated transit networks compared

to the June 15, 2022, transmittal package. The latest networks report <sup>9</sup> associated with this transmittal package can be found on the “Model Documentation” webpage.

Land Use Data: TAZ-level land-use data from **Round 9.2** of COG’s Cooperative Forecasting program. Employment data for some jurisdictions has been adjusted to ensure that a consistent definition is used across the entire modeled area. Details can be found in a recent memo.<sup>10</sup>

## BACKGROUND INFORMATION

For quality control purposes, staff has executed all modeling scenarios twice to ensure that the model results can be replicated. Staff has also updated the travel model user’s guide, mentioned earlier, so that recent updates are explained.

The latest model and network documentation can generally be found on the following webpage:

<https://www.mwcog.org/transportation/data-and-tools/modeling/model-documentation/>

A complete listing of all transit, highway and HOV/HOT projects assumed in the 2022 Update to Visualize 2045 plan and the FY 2023-2026 TIP can be found in Appendix B of the Air Quality Conformity report.<sup>11</sup>

The projects are also displayed on an online interactive map on the COG website here:

<https://www.mwcog.org/maps/map-listing/visualize-2045-project-map/>

To request the model, interested parties should follow the procedures listed on COG/DTP’s Data Requests webpage:

<https://www.mwcog.org/transportation/data-and-tools/modeling/data-requests/>

The travel modeling inputs and application files are organized in a structured subdirectory system shown in Table 1. The subdirectories are organized by Cube Voyager scripts, inputs, and supporting application files. As noted in the Ver. 2.4 Model user’s guide, the Ver. 2.4 Model was developed using Cube Voyager ver. 6.4.1, so it is generally **recommended that you use Cube 6.4.1** with the Ver. 2.4 Model. See the user’s guide for more details. Also, note that the model outputs are not included with this transmittal, due to their large size (about 10 to 25 GB per alternative), but specific output files may be made available upon request.

<b>Total</b>	<b>1,795,837,095</b>	<b>734</b>	

The rest of the memo includes:

1. Notes on applying the model
2. Notes on additional documentation
3. A listing of model inputs and application files
4. Control totals resulting from a full application of the model

## APPLYING THE MODEL

The Ver. 2.4 Model is applied using a series of prepared batch files that operate within the above subdirectory system. The following batch filenames may be used to execute the model for years 2017, 2021, 2023, 2025, 2030, 2040, or 2045 (the filename shown is entered at the command prompt in the “root” subdirectory):

- run\_Model\_2017.bat
- run\_Model\_2021.bat
- run\_Model\_2023.bat
- run\_Model\_2025.bat
- run\_Model\_2030.bat
- run\_Model\_2040.bat
- run\_Model\_2045.bat

As noted in the model user’s guide (Sec. 3.2), the automated procedure to generate transit walksheds and calculate the percent of each zone within walking distance to transit service has now been **turned off by default** and the output **areawalk.txt** files are provided in the “Inputs” subdirectory.

Further details about how the model is structured and how to set up your computer for running the model are provided in the relevant chapters of the user’s guide:

- Chapter 3: Hardware and software requirements
- Chapter 4: Mechanics of the model application process
- Chapter 5: Preparing to run the model

- Chapter 6: Running the model

The model has been designed to operate with a maximum of 8 computer-chip cores (during highway assignment). Chapter 8 of the user's guide ("Use of parallel processing to reduce model run times") describes how parallel processing is used in the model. This chapter also includes a table (Table 21) showing how to change batch files to run on computers with fewer than 8 cores.

## **ADDITIONAL MODEL DOCUMENTATION**

Additional documentation is included in the "Docums" folder of the transmittal (i.e., "CGV2\_4\_2022\_Update\_Visualize2045\_Xmittal\_Revised\Docums"). This folder includes one data file and several technical memoranda:

### **Data file**

- **rd92\_tpb3722.csv**: This file contains the Round 9.2 land activity data from COG's Cooperative Forecasts, referenced in the memo below. This data has not undergone the employment definition adjustment, which are used to ensure a consistent definition of employment throughout the modeled region, so it is not suitable for use in the travel model.

### **Documents**

## **TABLES**

The following tables are attached: 1) A listing of batch files, control files, script files, support files, and model input files by year; and 2) A listing of regional control totals generated after a complete execution of the model (using the default 8 cores) by analysis year.
