

## MEMORANDUM

**TO:** TPB Technical Committee  
**FROM:** Wendy Klancher, AICP, TPB Transportation Planner  
Timothy Canan, AICP, TPB Planning Data and Research Program Director  
Sergio Ritacco, TPB Transportation Planner  
**SUBJECT:** Updated Equity Emphasis Areas  
**DATE:** April 25, 2018

---

The TPB adopted the methodology for Equity Emphasis Areas (EEAs) and the resulting map in March 2017 after a thorough consultation process with the Planning Directors Technical Advisory Committee and the Technical Committee as the first step to enhance the approach to analyze the long-range transportation plan for Title VI and Environmental Justice (EJ) considerations. In preparation for Visualize 2045, the Equity Emphasis Areas were updated with the most recent Census estimates using the TPB-approved methodology. The Technical Committee will be briefed on the changes, on any comments from the Planning Directors Technical Advisory Committee (PDTAC) and will be asked for feedback.

TPB staff used the 2012-2016 5-year estimates from the American Community Survey (ACS) from the U.S. Census Bureau to update the Equity Emphasis Areas. The 2010-2014 5-year estimates were used to prepare the map initially. Although the methodology is unchanged, using updated demographic estimates has resulted in some minor changes to the original EEAs. Figure 2 identifies which of the original EEAs have been removed as well as the new EEAs that have been added as a result of using updated data within the same methodological framework. Figure 3 contains the updated EEA map.

TPB staff briefed the Planning Directors Technical Advisory Committee (PDTAC) on the updated Equity Emphasis Areas at its April 10 meeting. Comments from PDTAC members at the meeting indicated support for and understanding of the updated Equity Emphasis Area using more recent data. TPB staff invited PDTAC members to continue to provide additional comments following the meeting and offered to consult further with the PDTAC, if desired. To date, no further comments have been received from PDTAC members since the April 10 meeting.

## BACKGROUND AND CONTEXT

Federal regulations require the TPB to analyze the long-range transportation plan for disproportionately high and adverse impacts on low-income and minority populations. The TPB's primary purpose for the Equity Emphasis Areas is for use as an analytical tool to identify *regional* impacts of the planned transportation projects as whole by comparing accessibility and mobility measures for the Equity Emphasis Areas collectively with the rest of the region.

Additionally, the Equity Emphasis Areas can be used in other TPB work activities such as scenario planning and the Transportation/Land Use Connections (TLC) Program. The EEAs GIS layer and associated data have been made available to local jurisdictions to use at their discretion in efforts considering equity in initiatives such as education, health, and green space.

## THE TPB-APPROVED METHODOLOGY

The TPB-approved methodology relies on the U.S. Census Bureau American Community Survey (ACS) data on income, race and ethnicity to determine what Census tracts are considered Equity Emphasis Areas. A 5-year time series of ACS is used because ACS data are updated using a revolving geographic sample and using a 5-year series ensures estimates for the entire region are included. Federal regulations require the TPB to consider both low-income and minority populations when examining the long-range transportation plan for disproportionate impacts. Four population groups are considered: Low-Income, African-American, Asian, and Hispanic/Latino. To normalize and compare the data across the four population groups and in the region, the EEA methodology entails assigning a value to each of the demographic factors for every Census tract. Higher estimates of each of the demographic factors receive higher values. For each tract, those values determine the index score for each population group and then the index scores are added together, and the tract is considered to be an EEA if the total score exceeds an established threshold. Income is weighted more heavily to reflect the assumption that income is a more significant predictor of an individual's ability to access transportation than race or ethnicity. The interactive online map of the original Equity Emphasis areas as well as the TPB-approved methodology can be found at: [mwcog.org/transportation/planning-areas/fairness-and-accessibility/environmental-justice/equity-emphasis-areas](http://mwcog.org/transportation/planning-areas/fairness-and-accessibility/environmental-justice/equity-emphasis-areas).

## UPDATING EQUITY EMPHASIS AREAS

TPB staff updated the Equity Emphasis Areas with latest available 5-year ACS data (2012 - 2016) to support analysis of Visualize 2045. In the future, EEAs will be updated in conjunction with each major long-range transportation plan update using the latest-available Census or ACS data available at that time. Major plan updates, like Visualize 2045, occur at least once every four years in accordance with federal regulations.

The spatial patterns in the updated EEAs are similar to the original map, and the clusters of EEAs remain generally unchanged, as shown in Figure 2. While some tracts dropped off and others were added when applying the TPB-approved methodology with latest ACS data, the difference at the regional level is negligible.

Table 1 shows the updated EEAs comprise 351 tracts, or 28.5 percent of the 1,230 tracts in the region. This is slightly lower compared to the original EEA map developed using 2010-2014 data, which included 360 tracts, or 29.2% of the total tracts in the region. Table 2 shows that EEAs accounted for 28 percent of the region's population when 2010-2014 data were used. This share increased slightly to 28.2 percent in the update.

Minor changes in the demographic data included in the update resulted in some localized changes in EEAs because the values already were very close to the methodological threshold used to determine what constitutes an EEA or not. In the updated EEAs, there were no new clusters of EEAs. Moreover, no large clusters of EEAs in original map were eliminated in the update. Figure 1 shows that the regional averages for the four population groups used in the EEA methodology change very little between the two datasets. At the tract level, changes in the low-income population was a predominant reason that a tract was either removed or added as an EEA in the updated map.

Individual maps and data tables of the updated Equity Emphasis Areas for TPB member jurisdictions are available, please contact Wendy Klancher at [wklancher@mwcog.org](mailto:wklancher@mwcog.org) or (202) 962-3321 for these materials.

## NEXT STEPS

Following the review of the updated Equity Emphasis Areas by the Planning Directors Technical Advisory Committee and the Technical Committee, staff will revise the online interactive map to reflect the updated Equity Emphasis Areas (EEAs). The Technical Committee is being asked to provide any comments on the updated EEAs by Friday, May 18 to Wendy Klancher at [wklancher@mwkog.org](mailto:wklancher@mwkog.org) or (202) 962-3321.

The Title VI/Environmental Justice analysis of Visualize 2045 will occur later this year and examine regional mobility and accessibility measures for the EEAs compared to the rest of the region for disproportionately high and adverse impacts. Staff expects to brief the Technical Committee and the TPB between October and December on the results from this analysis.
