

TMDL Restoration/Action/Implementation Plans – Part II
***A follow-up session on how to address the new MS4 permit requirement for plans to meet
wasteload allocations for all applicable TMDLs***

Monday: April 20, 2015
10:00 a.m. – 1:00 p.m.
Third Floor Board Room

COG will host a second workshop for local government stormwater staff to explore how different jurisdictions have met the challenge of developing plans for meeting the wasteload allocations of applicable TMDLs under their stormwater permits. These plans are required under the next generation MS4 permits that have been or are being issued throughout the region. COG staff also will highlight efforts to address similar activities for plans that the region's wastewater plants need to develop.
