## Regional Econometric Model Projections

- Population, Households, and Employment
- Top-down
- Regional share of national trends

## Jurisdictional Projections

- Land Use Plans
- Economic Develop priorities
- Transportation investments

## Regional Input - COG/TPB/Region Forward

- Vision
- Priorities
- Performance [Targets]

Cooperative  
Forecasts

# Optimize Regional Land Use Balance

## TPB Endorsed Initiative

---

- Through this initiative the TPB aspires to improve the performance of the region's transportation system.
- Three (3) primary components of this aspirational initiative:
  1. More households are needed to provide regional workers to meet demand from future job growth.
  2. Location of future growth in households and jobs within a jurisdiction should be focused in Regional Activity Centers and/or in areas with high-capacity transit.
  3. Better balanced distribution of future growth in jobs and housing between the eastern and western portions of the region should be sought.

# Few ideas for PDTAC's consideration

---

Ask: PDTAC Members to advance previous three aspirational components in their local land use plans; and identify enabling policy actions TPB members can take.

- Take stock of the current forecast.
  - Assess how Round 9.1 may address aspirations of the Optimized Regional Land Use Balance scenario
- Highlight examples of efforts under way in respective jurisdictions that demonstrate movement toward these aspirations.
- Discuss/review how local plans, strategies, and corresponding forecast update address these aspirations.
