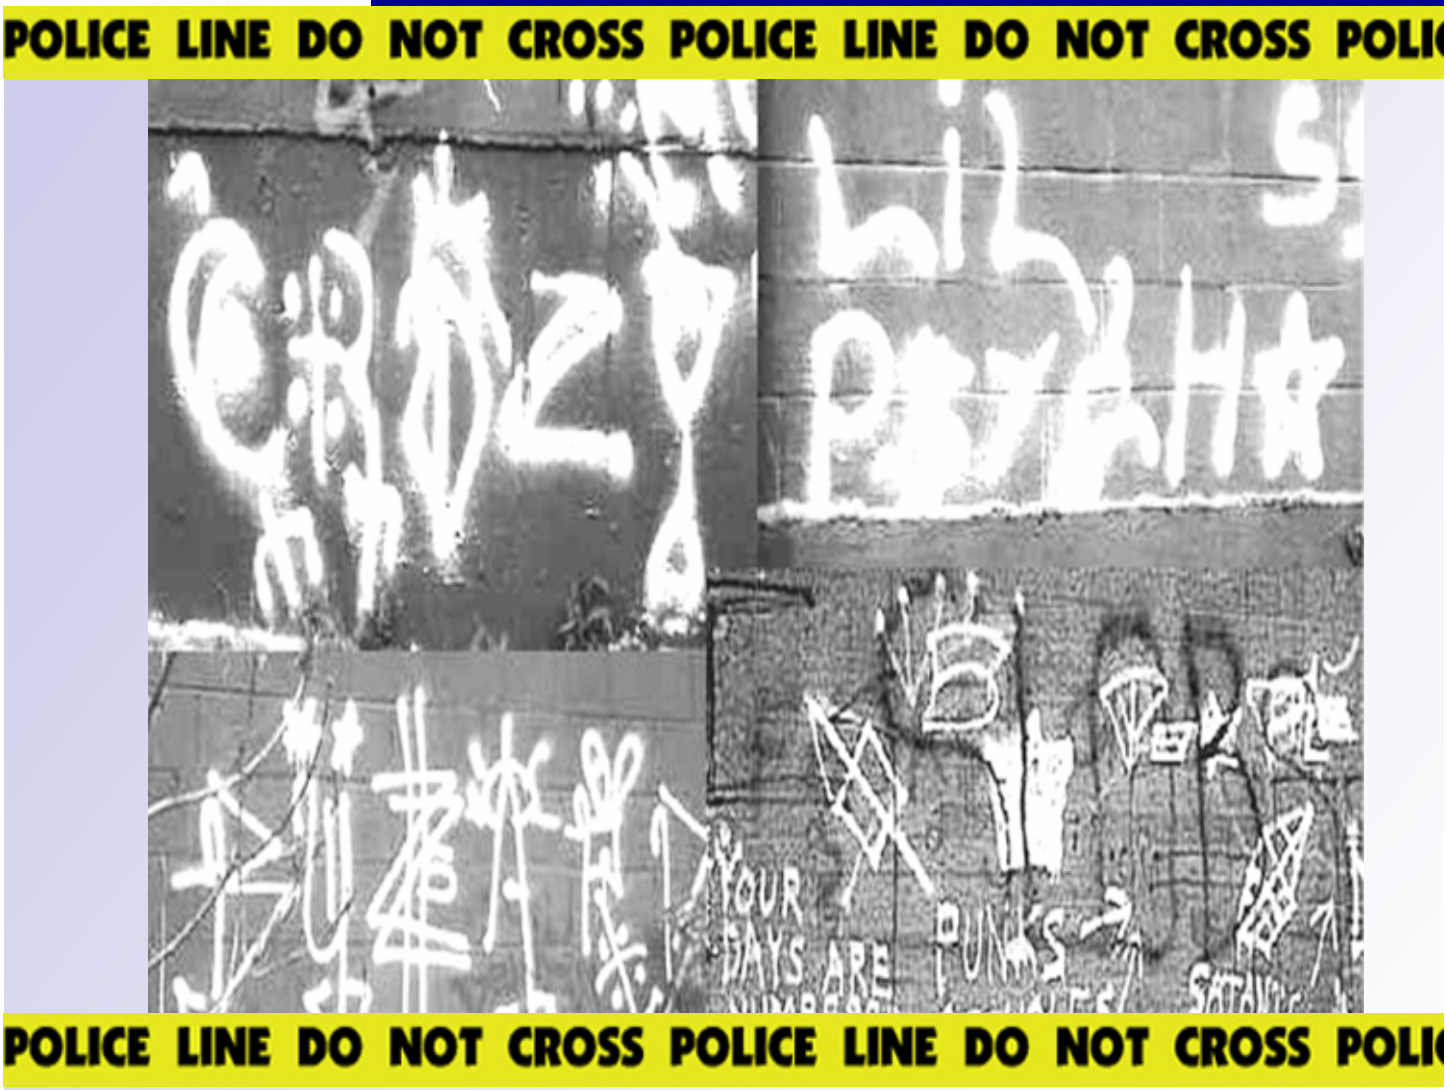
METROPOLITAN WASHINGTON
COUNCIL OF GOVERNMENTS



REPORT ON CRIME AND CRIME CONTROL IN THE COG REGION IN 2002 and 2003

ABSTRACT

TITLE: Report on Crime and Crime Control in the COG Region, 2002—2003

DATE: December 2004

AUTHOR: Stephen H. Dickstein, Melissa Massey, and Tolliver Hart

AGENCY: The Metropolitan Washington Council of Governments (COG) is the regional planning organization of the Washington area's major local governments and their governing officials. COG works toward solutions to problems in such areas as growth, air and water quality, transportation, public safety, and housing, and serves as the metropolitan planning organization for the Washington area.

ABSTRACT: This report provides information to governmental officials and the public as to the nature of the crime problem in the COG region including its magnitude and trends for calendar years 2002—2003. It also provides law enforcement administrators with criminal statistics for administrative and operational use.

PUBLICATION #: 2004NULL206

ORDER COPIES FROM: The Publications section houses electronic and hard-copy versions of many COG publications. See http://www.mwcog.org/publications/publications.asp to click on topical categories or to choose to view all documents by publication chronology or name. You may download electronic versions of the publications at no charge where available. Hard copy publications are available for a fee. You may purchase publications in the store securely with a credit card or print out the order form to send or FAX to COG.

IMPACT OF INCIDENT BASED REPORTING

Each year, The Metropolitan Washington Council of Governments (COG) solicits data from the law enforcement community for the purpose of developing an annual report that reveals a snapshot of crime and crime control in the region. The information contained in the data received from each law enforcement agency is collected using one of two methods: Uniform Crime Reporting (UCR) or the National Incident Based Reporting System (NIBRS). As the annual COG report is comparative in nature, in many respects, the utilization of two different reporting systems is similar to comparing apples and oranges.

UCR was developed in 1929 by the FBI as a "voluntary program to collect aggregate counts of index crimes – murder, rape, robbery, aggravated assault, burglary, motor vehicle theft, larceny, and, after 1978, arson." [4] Recognizing the need for additional information about crime, the FBI launched the National Incident-Based Reporting System (NIBRS) in the late 1980's as an "expanded and enhanced UCR Program to meet law enforcement needs into the 21st century." [5]

"As a general rule, NIBRS crime rates tend to be higher than UCR rates."

The FBI recognized from the outset that conversion to the new system would be gradual, so it is normal and appropriate that in 2002 many agencies are still reporting under UCR. The transition to NIBRS is expected to continue for several years.

NIBRS was designed to measure crime differently than UCR. The United States Department of Justice describes the principle difference in their design as such:

> ***Where Summary UCR measures the overall number of incidents for an index of crime, NIBRS measures both the overall number of incidents and the occurrence of each type of crime within every incident. NIBRS reporting gives more detail about offenses that occur during the commission of a crime without reporting significantly higher crime rates in most cases. However, NIBRS is more prone to non-uniform reporting practices and programming errors, whereas Summary UCR is more prone to reporting errors. [6]***

As a general rule, NIBRS crime rates tend to be higher than UCR rates. This tendency for data to inflate under NIBRS results from a variety of factors, but the primary reason is NIBRS' practice of statistically counting all separate violations within a single criminal event. In contrast, UCR counts only the most serious crime and does not count lesser, related crimes. For example, under NIBRS a murder committed during a robbery would count as two separate crimes, while UCR would treat the event as a single entity, counting the murder only. [7]

COG Member Jurisdictions Using UCR or NIBRS*	
UCR	**NIBRS**
Bowie	Alexandria
College Park	Arlington
DC	City of Fairfax
Fairfax County	Fauquier County
Falls Church	Loudoun County
Frederick County	City of Manassas
Gaithersburg	
Greenbelt	
Montgomery County	
Prince Georges County	
Prince William County	
Rockville	
Takoma Park	

Even though NIBRS crime rates are generally higher than UCR, the average difference between estimates is small. The U.S. Department of Justice estimates that the average statistical difference between the two methods is about 2% for all major categories of crime combined, with slightly higher disparities in certain categories of non-violent crime. Motor vehicle theft, for example, averages about 4% higher under NIBRS than it does under UCR. [8]

"Even though NIBRS crime rates are generally higher than UCR, the average difference…is small."

Individual agencies utilizing NIBRS may experience statistical increases that are substantially higher than the aforementioned averages. This occurs most often among small agencies that report comparatively few incidents, but can also occur among larger agencies; especially in the categories of larceny and vehicle theft. The extent to which an agency's data is affected by its choice of reporting methods depends upon local crime patterns and its respective state criminal laws. [9]

In summary, the crime statistics reported in this document have value to law enforcement agencies, government officials, and members of the public within the parameters that they are presented. Comparisons of data reported by agencies utilizing UCR with similar data reported by agencies utilizing NIBRS should be viewed in the proper context. Therefore, it should be understood any comparisons made during this transition period reflect that different measuring systems with different reporting rules were used. [10]

WHERE WE STAND-CRIME IN THE REGION

Part I crime in the Metropolitan Washington region increased by 0.4% from 2001 to 2002 and decreased in 2003 by 5.6%. Nationally, Part I offenses were virtually unchanged during both years; increasing less than 0.1% from 2001 to 2002 and decreasing 0.5% in 2003.

Individually, the District of Columbia and the Commonwealth of Virginia experienced decreases in Part I crime during the period from 2001 to 2002 (0.02% and 5.1% respectively) and 2002 to 2003 (8.9% and 7.2% respectively). The State of Maryland saw an increase in Part I crime from 2001 to 2002 (5.8%), but a decline in 2003 (3.1%).

Several agencies didn't submit crime data for 2002 and 2003. Furthermore, the Council of Governments added two new jurisdictions during this time period (City of Manassas in 2002 and Manassas Park in 2003). For 2001 to 2002, the comparative analysis doesn't include either the City of Manassas or Manassas Park. For 2002 to 2003, the comparative analysis doesn't include Manassas Park.

Percent Change in Part I Crime

2001 to 2002

	Nation	COG Region	DC	Maryland	Virginia
Homicide	+1.0%	+16.5%	+13.4%	+31.5%	-12.8%
Rape	+4.7%	+13.8%	+45.6%	+8.8%	-4.8%

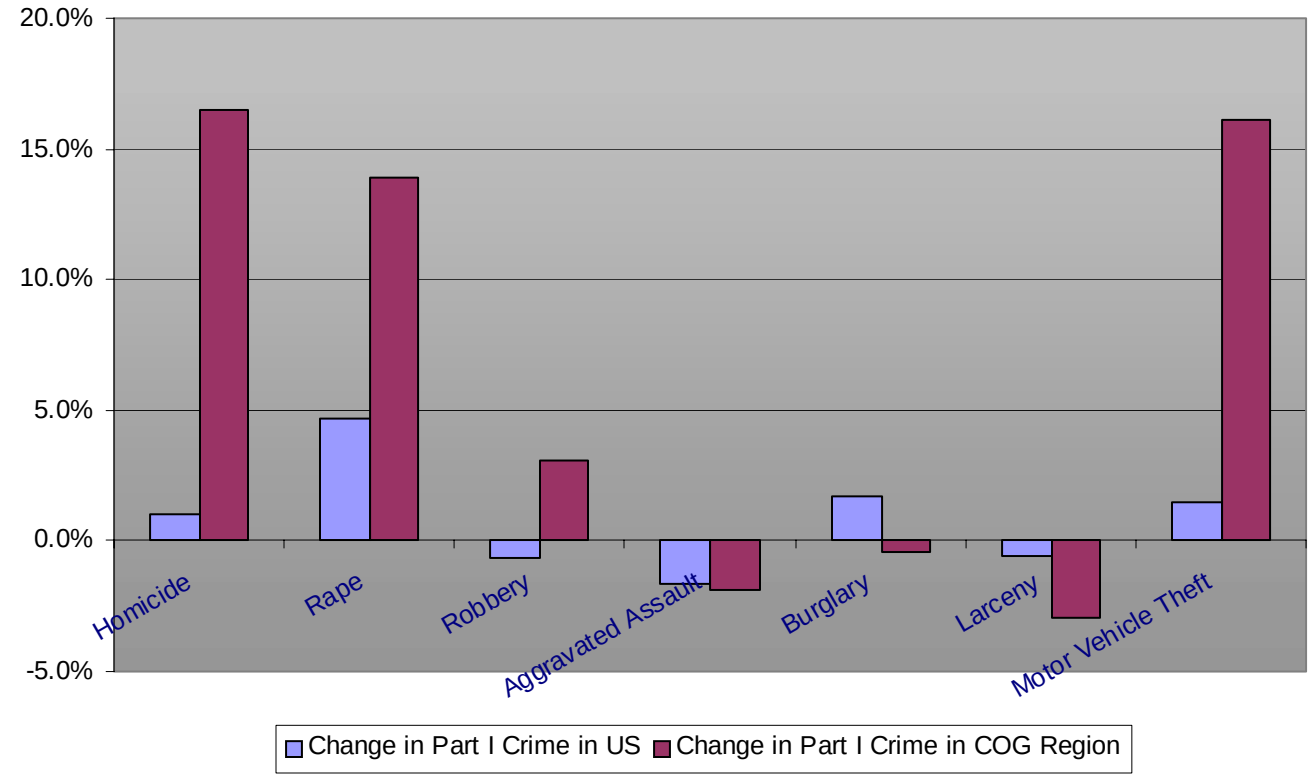
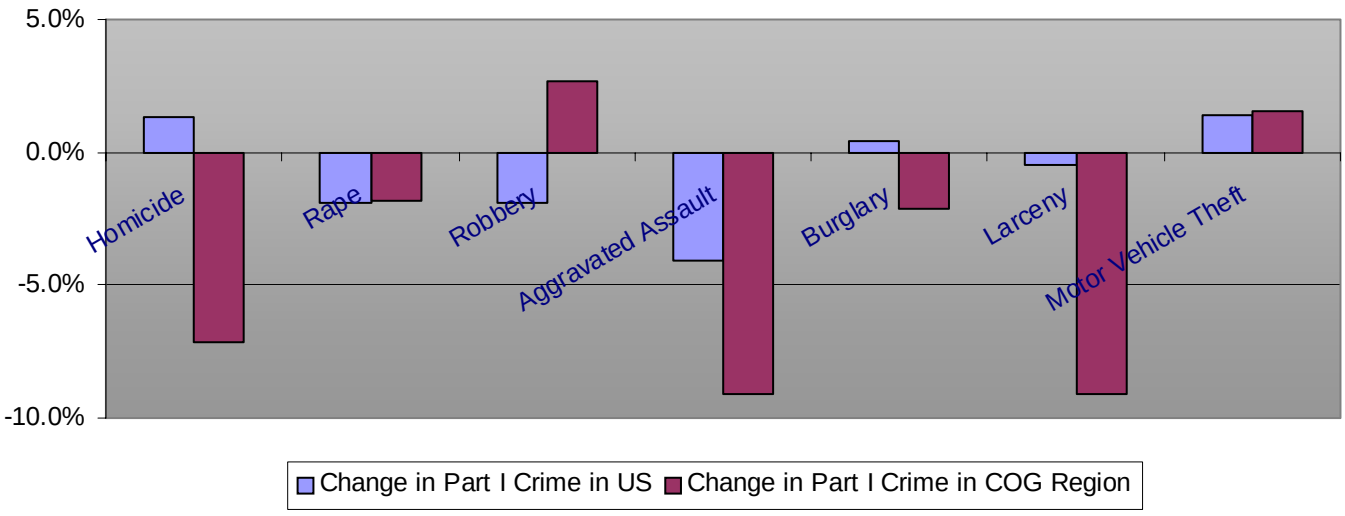
PART 1 OFFENSES: 2002 AND 2003

Change in Part I Crime: 2001 to 2002



Change in Part I Crime: 2002 to 2003



VIOLENT CRIME

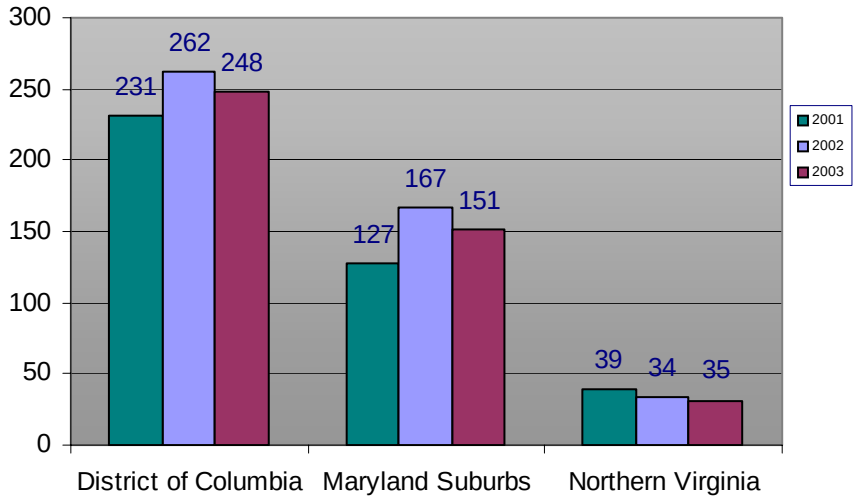
Violent Crime consists of Homicide, Rape, Robbery, and Aggravated Assault. These "Crimes Against People" were up 1.2% in the Metropolitan Washington area in 2002. Nationally, Violent Crime increased only slightly, by .85%. In 2003 violent crime decreased by 3.6% in the Metropolitan region and decreased similarly by 3.0% in the nation.

In the Maryland suburbs, however, violent crime was up 3.7% in 2002. This changed in 2003 when , out of all three sub-regions, Maryland showed the greatest decrease with 5% fewer violent crimes.

These increases are in violent crimes reported to police. The National Crime Victimization Survey (NCVS), which is based on interviews with victims only and does not include homicides, reported a 7.01% decrease in violent crimes nationally in 2002. The NCVS also reports once again that only 49% of all violent crimes are reported to police.

Homicide

There were 463 homicides in the Metropolitan Washington region in 2002, up 16.6 % from 2001. The DC-Area Sniper attacks of 2002 were included in this analysis, but only accounted for 2.1% of the overall total homicides. This is the second year in a row showing an increase in homicides. This pattern ended in 2003 when there were 436 homicides in the COG region, down 6.8% from 2002. The regional increases in homicides are noticeably higher than the national increases of 1.0% in 2002 and 1.7% in 2003.

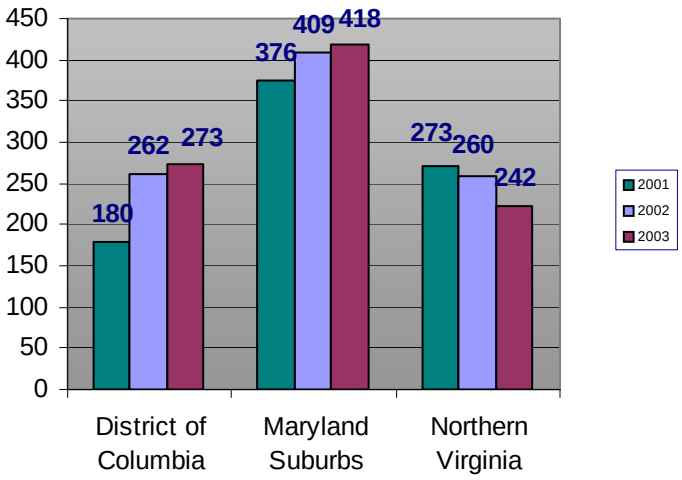


The Suburbs of Virginia reported a 12.8% decrease in homicides for 2002 , the only area to show a decrease. In 2003, they continued to show a decrease with 2.8% fewer homicides. The Maryland suburbs reported 31.5% more homicides in 2002, showing another large increase for the second year in a row. With 167 homicides in 2002 they nearly doubled the 86 reported homicides in 2000. This growth was lessened in 2003 when the Suburbs of Maryland had the largest decrease in the Metropolitan Washington area, with a 9.6% drop in homicide in 2003.

The District of Columbia reported a 13.4% increase in homicides in 2002 and saw a decrease of 5.3% in 2003. As in the past, more homicides were committed in the District than in any other sub-region. Of the 466 homicides committed in the region in 2002, 56% occurred in the District. Similarly, of the 436 homicides committed in the region in 2003, 57% occurred in the District.

Rape

The Metropolitan Washington area experienced a 13.8% increase in rapes in 2002. This increase is balanced by the record decrease in rapes reported in 2001. In 2003 there was a 1.8% decrease in rape, though only one of the three sub-regions reported a decrease. In 2002, the District of Columbia saw a 45.6% increase in rape after a 23 % drop in 2001. DC had slightly more reported rapes in 2003 showing an increase of 4.2% . Nationally, reported rape cases rose by 4.7% in 2002, then decreased by 1.9% in 2003.



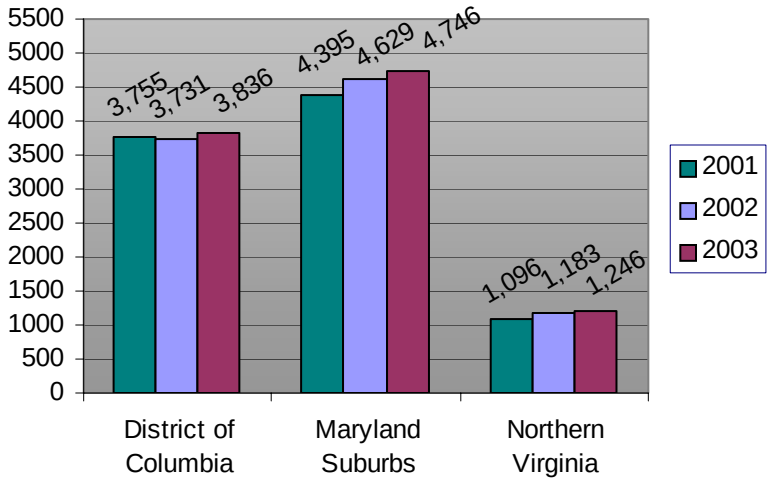
Despite the significant increase in rapes in DC, the Maryland Suburbs accounted for 43% of all rapes in the COG region in 2002 and 44% of all rapes in the COG region in 2003

While in 2001 Northern Virginia was the only sub-region to show an increase in rape, in 2002 it was the only sub-region to show a decrease, down 4.8% from 2001. In 2003, Northern Virginia showed a significant decrease in rape, with 12.3% fewer . That constitutes the second year in a row that the Northern Virginia sub-region experienced a decrease in rapes.

Robbery

Robberies were up 3.2% in the Metropolitan Washington area in 2002, for a total of 9,543 offenses. In 2003 the total increased by 2.6%, up to 9,795. Nationally, robberies decreased marginally, by 0.7%. There was a somewhat greater decrease in 2003, with 1.8% fewer reported robberies.

In 2002, Northern Virginia experienced the highest increase in robberies, with 7.9% more reported cases. The following year, both Northern Virginia and the Maryland Suburbs had smaller increases of 1.2% and 2.5%.



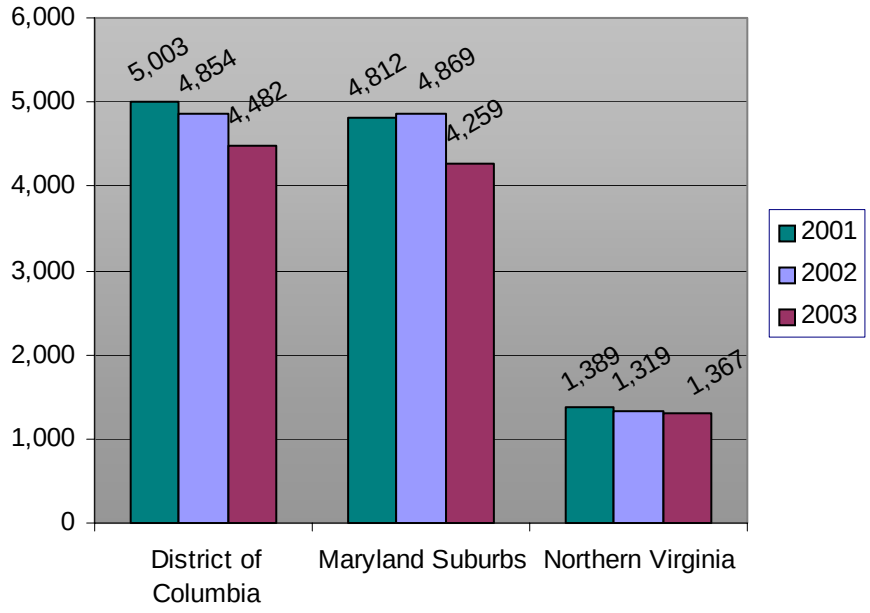
The District had a minimal decrease in robberies of 0.6% in 2002. After being the only sub-region to show a decrease in 2002, the District saw the highest increase in robberies in 2003 with 2.8% more being reported in 2003 than in 2002.

Aggravated Assault

Nationally, Aggravated Assaults were down 1.6 %. Similarly, in the COG region, aggravated assaults were down 1.9% for a total of 11,151 offenses in 2002. In 2003 the Nation experienced a 3.8% decrease in aggravated assaults. The COG area saw a greater decrease in aggravated assault in 2003, having 9.1% fewer offenses than in 2002.

Only the Maryland suburbs reported a slight increase in 2002, with 1.2% more cases. Unlike in 2002, in 2003 the Maryland suburbs held the largest decrease in the area with 12.5% fewer aggravated assaults reported in 2003.

Northern Virginia interestingly enough had a 0% change in aggravated assaults in 2003, having exactly 1,367 reported in both 2002 and 2003.



PROPERTY CRIME

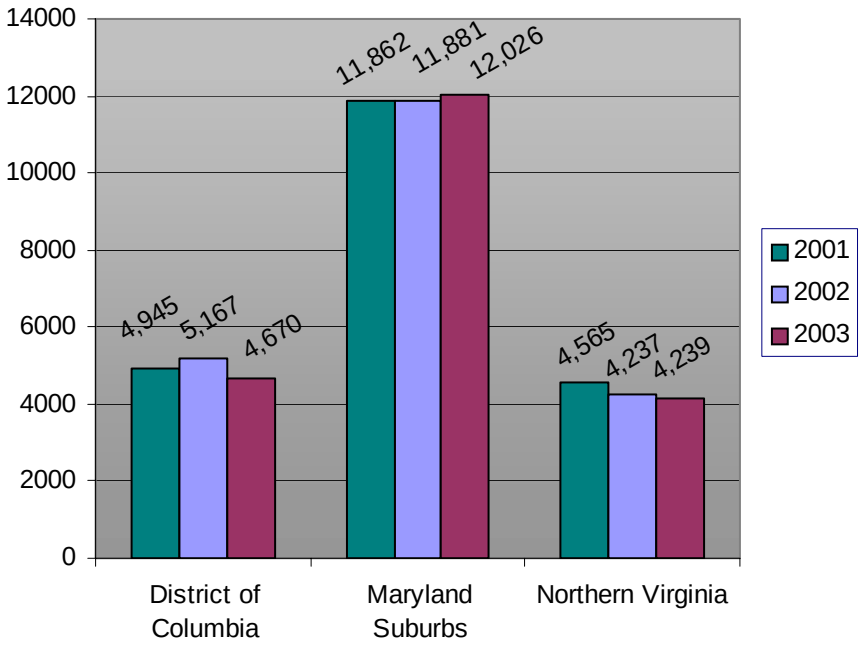
Crimes Against Property (Burglary, Larceny and Motor Vehicle Theft), were up 0.3% in 2002 with 157,961 reported offenses. In 2003 property crimes were down 5.8%. Nationally, property crimes remained relatively steady over 2002 and 2003, with an increase of only 0.1% in 2002 to followed by a decreased of 0.2% in 2003.

Like the US as a whole, DC reported only a 0.1% increase in property crimes in 2002, while the Maryland suburbs reported an increases of 6.0%. Northern Virginia saw a decrease of 3.8% that year. All three sub-regions saw a decrease in property crimes in 2003. DC experienced the largest decrease with 10.4% fewer property crimes. The District of Columbia reported the lowest number of property crimes in the area for 2003, with 31,581 offenses.

The NCVS reported a 4.1% decrease in property crimes in 2002, and also estimated that only about 40% of all property crimes were reported to the police that year.

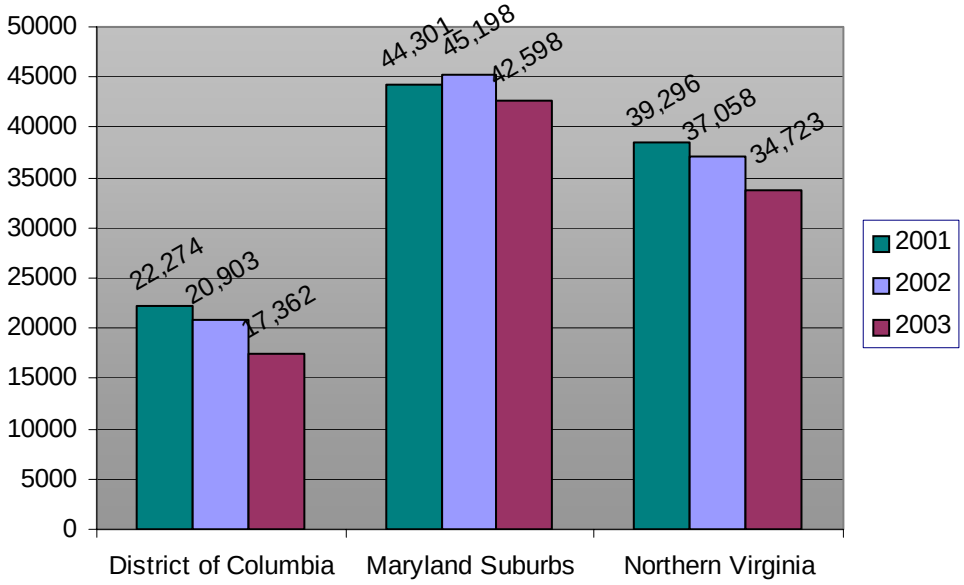
Burglary

Burglaries decreased in the metropolitan Washington area by 0.5% in 2002, with 87 fewer reported cases. That trend escalated slightly in 2003 with 435 fewer reported cases, a 2.2% decrease since 2002. Nationally, burglaries decreased in 2002 by 1.7%. The nation's burglaries increased by 0.1% in 2003.



In the COG region, Virginia was the only sub-region to show a decline in burglaries in 2002, with 7.2% fewer incidents. In 2003, the District saw the greatest drop in burglaries, with 9.6% less than in 2002. Maryland was the only sub-region to report an increase in burglaries in both years, albeit minimally. In 2003, it rose 1.2%, after rising by 0.2% in 2002.

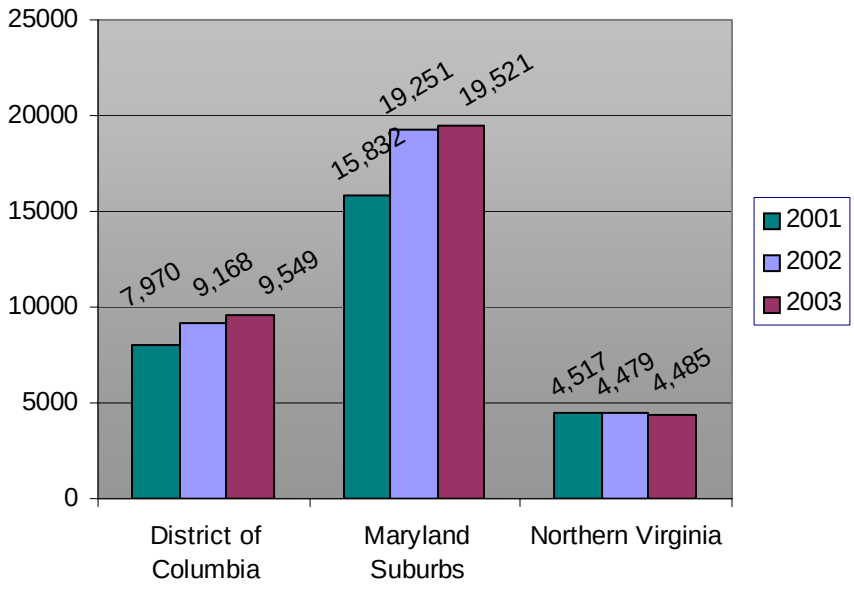
Larceny



Larcenies in the COG region decreased by 3.7% in 2002, with 3,955 fewer offenses. In 2003, larcenies decreased even more, with a 8.9% drop.

The District of Columbia showed the largest decrease in both years, with 6.2% fewer larcenies in 2002 and 16.9% fewer cases in 2003. Maryland was the only sub-region to report an increase in larcenies in 2002 (2.0%). This changed in 2003 when all sub-regions reported a decrease in larcenies.

Nationally, larcenies were down slightly in both 2002 (0.6%) and 2003 (0.5%) .



Motor Vehicle Theft

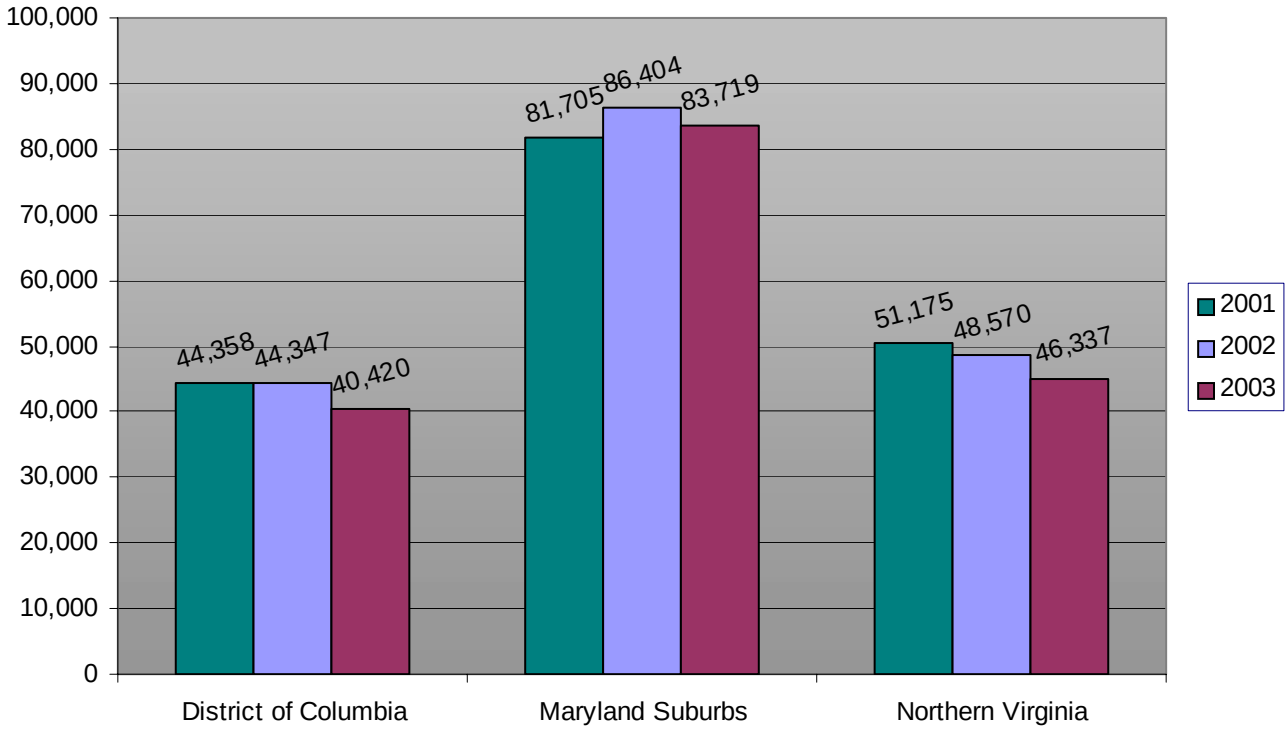
Motor Vehicle Thefts increased by 16.1% in the COG region in 2002, following a 24.1% increase in 2001. There appeared to be a leveling off in 2003, with Motor Vehicle Thefts rising only 1.5% across the region.

Northern Virginia reported the only decreases in Motor Vehicle Thefts in the COG Region in 2002 and 2003, with slight decreases of 0.8% and 3.2% respectively. Both the District and Maryland showed significant increases in Motor Vehicle Thefts

again in 2002, with 15% and 21.6% respectively. In 2003, the District and Maryland reported much smaller increases in Motor Vehicle Thefts with DC seeing a rise of 4.2% and the Maryland suburbs seeing these crimes grow by 1.4%. In the COG region 33,577 Motor Vehicle Thefts were reported in 2003.

Nationally, Motor Vehicle Thefts increased by 1.4% in 2002 and 1.1% in 2003.

Total Part I Offenses



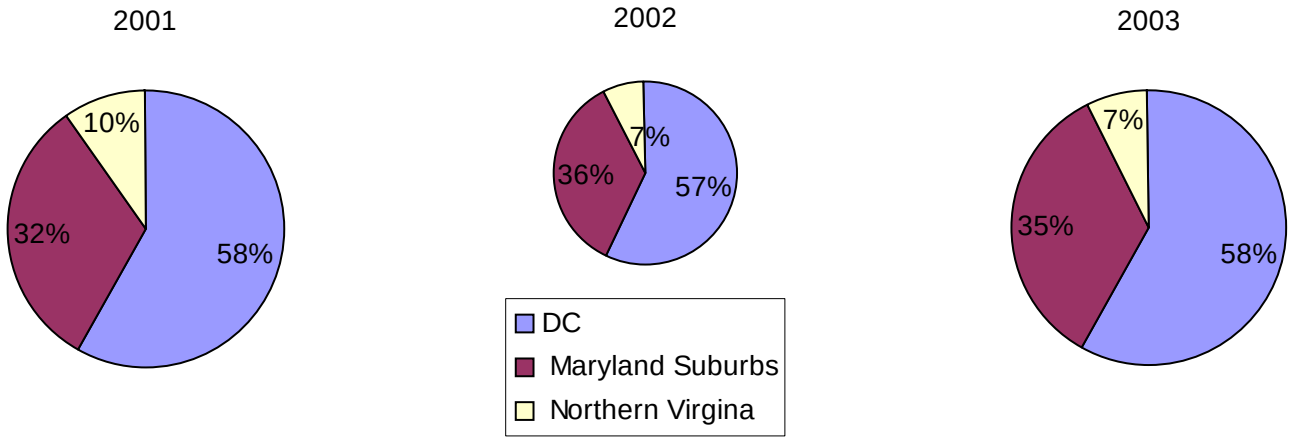
Total Part I offenses increased 0.4% in the Metropolitan Washington area from 2001 to 2002, although all sub-regions reported a decrease except Maryland. The following year, there was a Total Part I decrease of 5.6% in the region. This was facilitated by each sub-region experiencing its own decline in reported crime.

In 2002 the Maryland suburbs reported an increase of 5.8%, unlike the District, which remained basically unchanged (decrease of less than 0.1%). The Northern Virginia suburbs reported a decrease of 5.09% in Part I offenses in 2002.

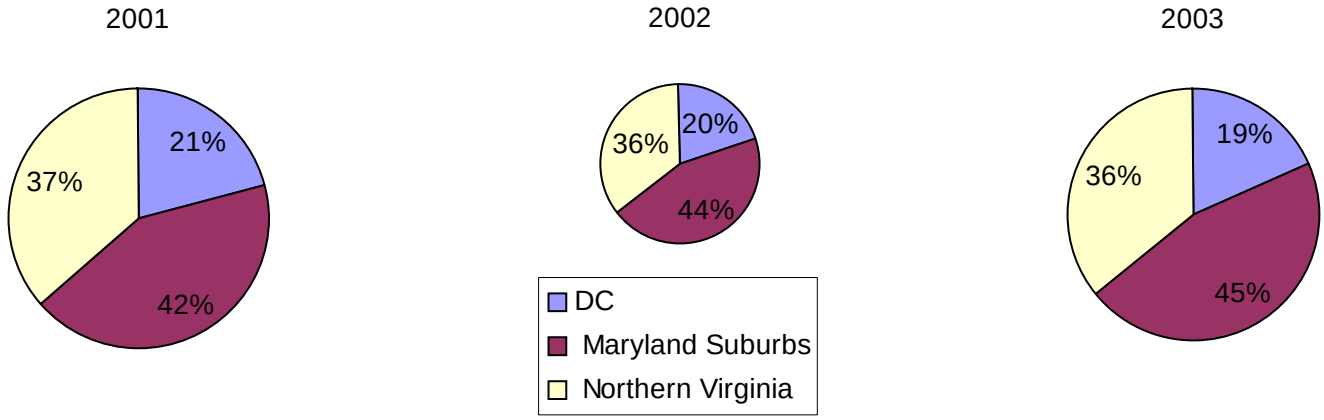
Relatively steep declines in offenses were seen in 2003, where Maryland experienced the smallest change with 3.1% fewer crimes reported in 2003, Virginia experienced a 7.2% drop in reported crime, and 8.9% fewer offenses were reported in the District of Columbia.

JURISDICTIONAL PROFILES

Upon reviewing the previous charts in this report, an interesting picture emerges. While there are natural fluctuations in each sub-region for each type of crime, an underlying pattern is also apparent. Despite increases and decreases in crime from year to year, the overall proportion of each crime occurring in the 3 sub-regions remains relatively unchanged. For example, looking at Homicides from 2001 through 2003, we see that approximately 58% occurred in DC each year, 34% in the Maryland Suburbs, and 8% in Northern Virginia.



Alternatively, Larceny gives a different picture. During the same time period, and again with minor fluctuations year to year, we do see a definite pattern. Approximately 20% of all Larcenies occurred in the District, 44% in Maryland, and 36% in Northern Virginia.



Caution!

While it may be tempting to look at these patterns and make assumptions about the relative risks of each type of crime in one neighborhood compared to another, the actual truth is not as clear as the statistics might suggest.

We all know crime does not recognize political boundaries. Crossing the Key Bridge from DC into Virginia does not immediately lower your risk of being a victim of homicide any more than it increases your risk of being a victim of larceny. So, how can those patterns be explained?

Contributing Factors

As explained earlier in this publication, there are different reporting systems used to collect and analyze crime data: UCR and NIBRS. With most of the Virginia jurisdictions using a different reporting system than DC and Maryland, it can be expected that patterns in those areas may not look the same in Virginia. Again, this reiterates the problems in "comparing apples to oranges,"

Other possible factors contributing to the apparent patterns include differences in State laws, local law enforcement programs, and even the victims themselves.

While the FBI generally defines each of the Part I Index crimes for the purposes of reporting local data, state (or commonwealth) laws are more explicit in defining how a crime is categorized. For instance, in some states, Rape is defined as a sexual assault by a man on a woman. It can be expected that they would have a lower number of Rapes than a state which only specifies that the assault be committed forcefully on the victim, without mention of the gender of either party.

Local programs, whether they be organized by local communities, taught in schools, or structured by law enforcement agencies, may have an impact on specific types of crime. For example, a strong, ongoing, state-wide campaign to encourage the use of anti-theft devices on vehicles is likely to result in lowered rates of Motor Vehicle Theft. That reasoning recently led the Metropolitan Police Department to initiate a program of handing out external locking devices ("Clubs") to people who park in certain areas of the city.

It has also been theorized that people tend to report crimes in a manner similar to the UCR in that they are more likely to report the most serious crimes. As mentioned previously, the National Crime Victimization Survey estimates that less than half of all crime is reported to the police.

For these reasons and others, it is recommended that comparisons not be made from jurisdiction to jurisdiction. There may indeed be legitimate patterns of certain types of crimes in out region. Our hope is that this report may spark the beginning of true dialogue and thorough analysis in how to reduce crime throughout the Washington Metropolitan Area.

APPENDIX A

2002 DATA TABLES

DATA TABLES	
1A	2002 Part I Crime Statistics—Overview
1B	Special Category Crimes
2	2002 Management Data
3	Part I Offenses: 2002 vs. 2001
4	Part I Offenses by Sub-region: 2002 vs..2001
5	Crime Category as % of Total: 2002 vs. 2001
6	% of Crimes Against People Versus Property Crimes: 2002
7	Crime Rate Index (Crimes per 1,000 Residents)
8A-D	Crimes Against People: 2002 vs. 2001
9A-D	Property Crimes: 2002 vs. 2001
10	Part I Offenses: 2002 vs. 2001

APPENDIX C
GENERAL NOTES

The data contained in this report is based on the information that COG staff was able to collect and verify. As can be seen in the report only partial data or no data at all was collected on some departments.

With the addition of Manassas and Manassas Park to the Metropolitan Washington Council of Governments the placement of departments on some charts were changed due to space configuration. For example, the Fauquier County Sheriff's Office was listed under COG Departments in 2002, but moved under Associate Departments in 2003.

The total Part I Offenses previously reported for the Defense Protective Service in the 2001 Report was changed in this report under the name of the Pentagon Force Protection Agency. Therefore, the total Part I Offenses reported in Table 12 may not match other parts of the report where more comprehensive data was captured.

It must also be reiterated that reporting methods are not uniform throughout this report since some departments utilized the Uniform Crime Reporting (UCR) and others the National Incident Based Reporting System (NIBRS). Moreover, since much of this report is comparative from one year to the next some data from Manassas and Manassas Park may have not been used in the analysis due to their recent addition to COG.
