**MEMORANDUM**

**TO:** Joint Technical Working Group  
Regional Mobility and Accessibility Study

**FROM:** Robert L. Snead,  
Senior Transportation Engineer

**SUBJECT:** Final CLRP+ Scenario Network Coding Assumptions

**Date:** July 16, 2004

The CLRP+ transit network is an enhancement of the adopted Constrained Long Range Plan (CLRP) transit network. The network was developed by adding transit elements from “Coordinated Regional Bus and Transit Service” assumptions that were refined by the Transportation Scenarios Subgroup. These assumptions included recommendations contained in WMATA’s Regional Bus and Core Capacity studies and specifications from local and state transportation agencies.

The AM peak period transit network for the Adopted CLRP modeled 1,050 transit routes and their variants, whereas 1,178 transit routes are now modeled in the CLRP+ Scenario. Eleven new routes have been added to the network, eight routes representing local bus service in Maryland’s Charles County and three new VRE commuter rail routes.

The two networks modeled 947 common routes where origin and destination remained the same, but a number of these routes were specified to be coded with different service frequencies (headways). The CLRP+ Scenario added 231 new routes, and restructured 103 routes. Transit service coded for the “CLRP+” Scenario’s AM peak hour transit network is described later in this memorandum. Transit network statistics comparing the CLRP+ Scenario and Adopted CLRP AM peak period transit networks are not available at this time and will be provided at a later date

MWCOG’s transit line files are developed using mode codes, which designate a specific provider or provider group. A listing of mode codes, mode descriptions, abbreviations used for transit providers, and transit providers and mode service areas is shown in Exhibit 1.

Exhibit 2 presents a catalogue of transit service coded for the “CLRP+” Scenario’s AM peak hour transit network. The Exhibit displays (1) line name, (2) mode code, (3) bus frequency or headway, (4) line direction (1 or 2 way), (5) origin and destination, and (6) notes.

The catalogue is presented in two major sections;

- 1) Transit service contained in the “CLRP+” Scenario. This section is presented as follows:
  - (1) Jurisdiction,
  - (2) Restructured routes and existing service improvements,
  - (3) New routes,
  - (4) RapidBus routes, and
  - (5) Routes accessing bus lanes.
  
- 2) This section lists transit service modeled in the 2030 transit network for the FY 2004-2009 TIP and 2003 CLRP and is presented as follows:
  - (1) Base year service, majority of which is, unmodified by projects in the TIP and CLRP,
  - (2) Transit service for 2005 (Largo Metrorail Extension / MD US 50 HOV),
  - (3) Transit service for 2010 (Dulles Metrorail Extension),
  - (4) Transit service for 2020 (Corridor Cities Light Rail Line),
  - (5) Transit service for 2025 (Tysons Corner Inner Circulators), and
  - (5) Transit service for 2025 (Loudoun County Bus service).
