**AGENCY:**

The metropolitan Washington Council of Governments is the regional organization of the Washington area's major local governments and their governing officials. COG works toward solutions to such regional problems as growth, transportation, inadequate housing, air pollution, water supply, water quality, economic development and noise, and serves as the regional planning organization for metropolitan Washington.

---

**ABSTRACT:**

This report presents regional air passenger ground access forecast for the three commercial airports in the Washington Baltimore region. The air passenger enplanements are based on data from FAA forecasts. The report documents the techniques used to forecast air passenger originations by resident status and trip mode by AAZ and jurisdiction for the Base year 2011 and forecast years through 2040 to the three commercial airports in the Washington/Baltimore region.

## **1. Introduction**

MWCOG, in cooperation with the Federal Aviation Administration (FAA), the District of Columbia Department of Transportation, (DDOT), the Maryland Aviation Administration (MAA), and the Metropolitan Washington Airports Authority (MWAA), has conducted a metropolitan airport system planning process since 1978. The goal of this Continuous Airport System Planning (CASP) program is to provide a process that supports the planning, development and operation of airport and airport-serving facilities in a systematic framework for the Washington-Baltimore region.

Transportation planning at the regional level is coordinated in the Washington area by the National Capital Region Transportation Planning Board (TPB), which is staffed by MWCOG's Department of Transportation Planning. The TPB is composed of representatives of the transportation agencies of the states of Maryland and Virginia, and the District of Columbia, local governments, the Washington Metropolitan Area Transit Authority, the Maryland and Virginia General Assemblies, and members from the MWAA and federal agencies. Established in 1965, the TPB is the official Metropolitan Planning Organization (MPO) designated by the federal government to carry out the comprehensive regional transportation planning process under the authority of the Federal-Aid Highway Act of 1962, as amended.

The TPB has a Technical Advisory Committee, which in turn, has several standing subcommittees. One of these subcommittees, the Aviation Technical Subcommittee (ATS), provides oversight and direction to the CASP program. This *Washington-Baltimore Regional Airports Ground Access Forecast Update* was prepared as an element of the CASP work program under the oversight of the Aviation Technical Subcommittee.

In its role as the MPO, the TPB prepares the region's Constrained Long-Range Plan (CLRP) and Transportation Improvement Program (TIP). A key step in the CLRP and TIP preparation is the preparation of forecasts of travel demand over the planning period. Air passenger forecasts are directly used in the development of forecasts of locally originating ground access (passenger) vehicle trips to the region's three commercial airports. These forecasts of airport trips are included in the travel demand modeling for the CLRP.

The update of forecast air passenger ground access trips to the region's three commercial airports is an important step in the airport system planning process.<sup>1</sup> These airports are Baltimore/Washington International Thurgood Marshall Airport (BWI), Ronald Reagan Washington National Airport (DCA), and Washington Dulles International Airport (IAD). This report documents the latest update of Ground Access Forecasts for Washington/Baltimore Air Systems Planning region and the methodology used to update these forecasts. Detailed forecasts of average weekday local originating air passenger ground access trips from 161 local area Aviation Analysis Zones (AAZ) to each of the region's three commercial airports are presented in Appendix A of this report. Air passenger ground access trip forecasts are shown for the 2011 to 2040 forecast period. In Appendices B through D these forecasts are further broken out by major ground access mode for each local AAZ to Airport origin-destination pair. These ground access forecasts will be used as inputs for the CLRP and as the basis for revising the Ground Access Element of the CASP Regional Airport System Plan.

## **2. Study Area**

The Washington/Baltimore Air System Planning Region is larger than the combined areas that are normally within the Metropolitan Washington Council of Governments and Baltimore Metropolitan Council's purview. This combined area stretches from Harford County, Maryland, on the Susquehanna River to the north to Spotsylvania County, Virginia, in the south, and from the Chesapeake Bay in the east to the foothills of the Appalachian Mountains in the west. Figure 1 shows the jurisdictions that make up this region and depicts the location of the region's three commercial airports. In 2011, approximately 94% of locally originating air passengers flying out of one of the region's three airports began their ground access trip to the airport from a location within the boundaries of this Air System Planning Region. The other 6% of the locally originating air passengers came from areas beyond the borders of this region.

A locally originating air passenger is defined as air traveler beginning his or her air travel on a flight departing from one of the region's three airports. This definition excludes air travelers who

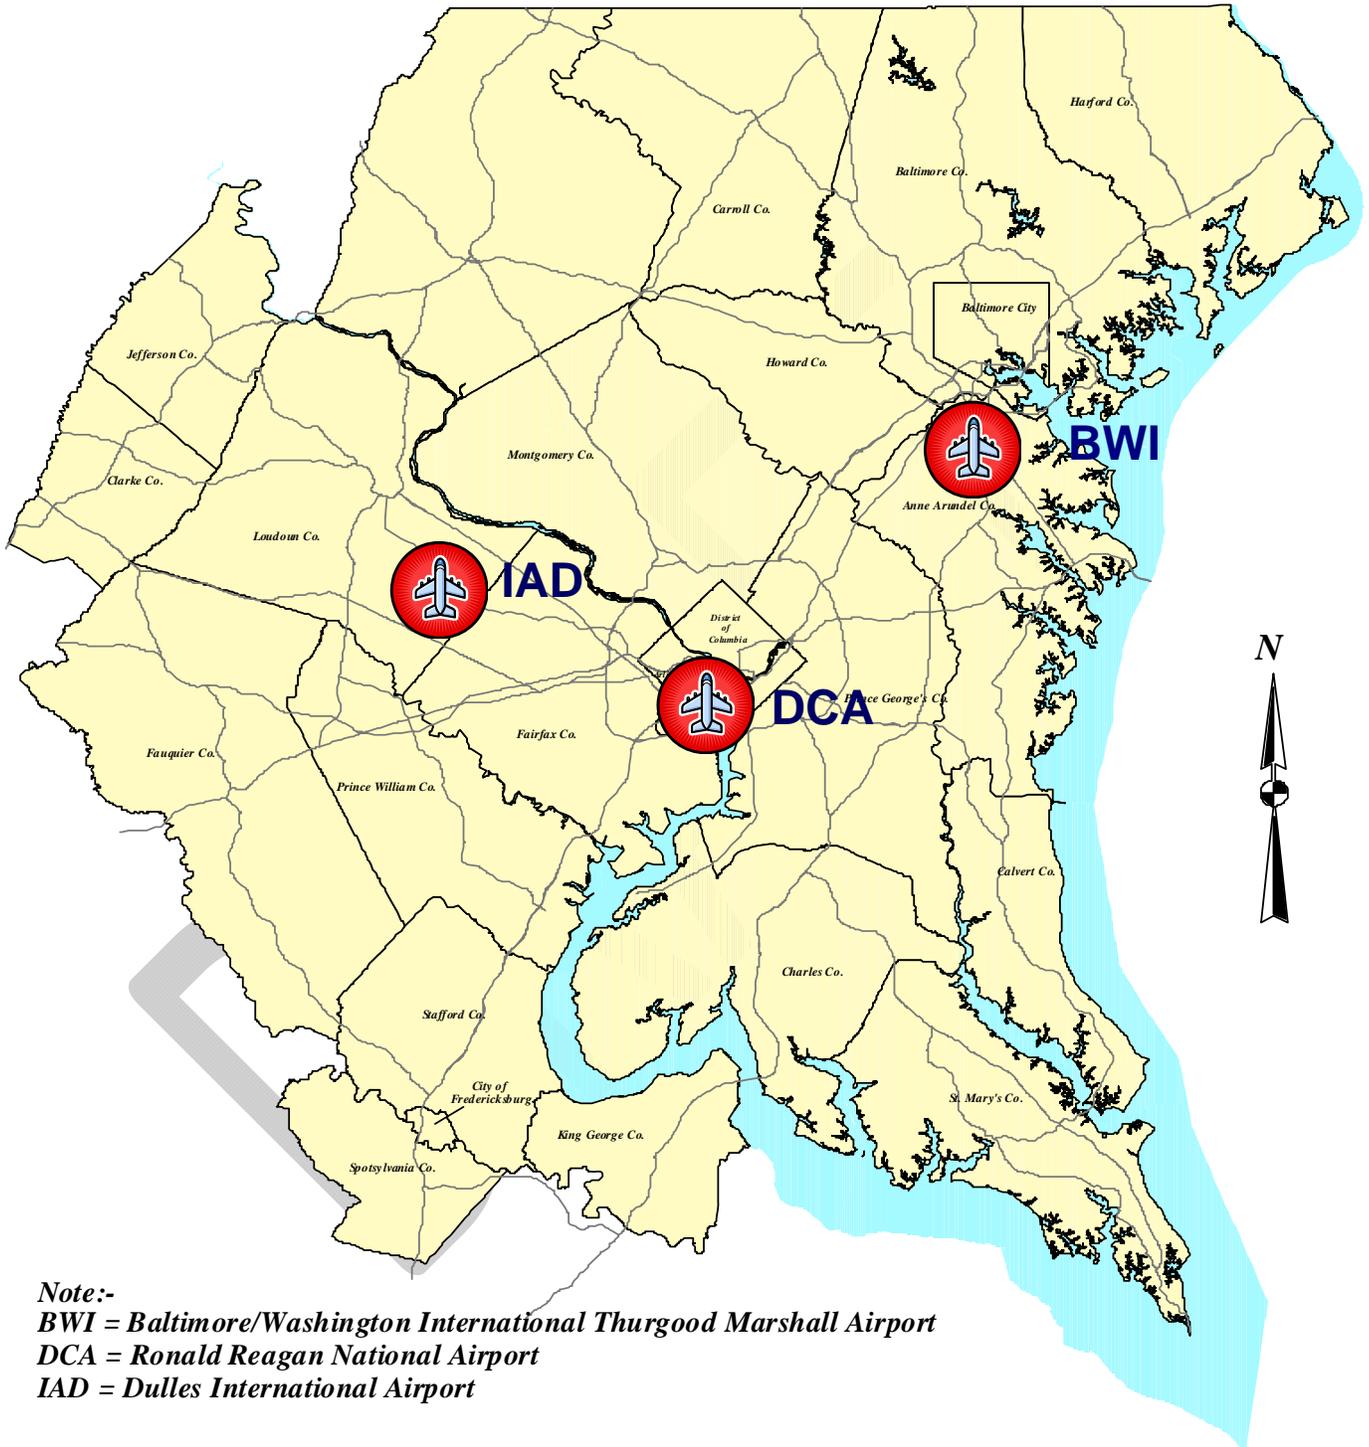

---

<sup>1</sup> Airport ground access trips are made up of four major groups. These are (1) locally originating air passengers, (2) airport employees, (3) airport visitors, and (4) air cargo carriers. Air passenger trips typically account one-half of all airport ground access trips. Forecasts of other types of airport ground access trips are already included in the standard TPB travel demand modeling of auto, transit and truck trips in the region.

are just connecting to another flight at one of the region's airport, but includes air travelers who are not residents of the Washington/Baltimore region who are making a return air trip home from a business or vacation trip to the Washington/Baltimore region. Thus, local originating air passengers can be either residents or non-residents of the Washington/Baltimore region. In fact, the results of the 2011 Washington/Baltimore Regional Air Passenger Survey showed that approximately 46% of all locally originating air passengers were non-residents who began their ground access trip to the airport from a hotel/motel, place of business, a private residence or other location in the Air System Planning region.

## Air Passenger Ground Access Trip Forecasting Methodology

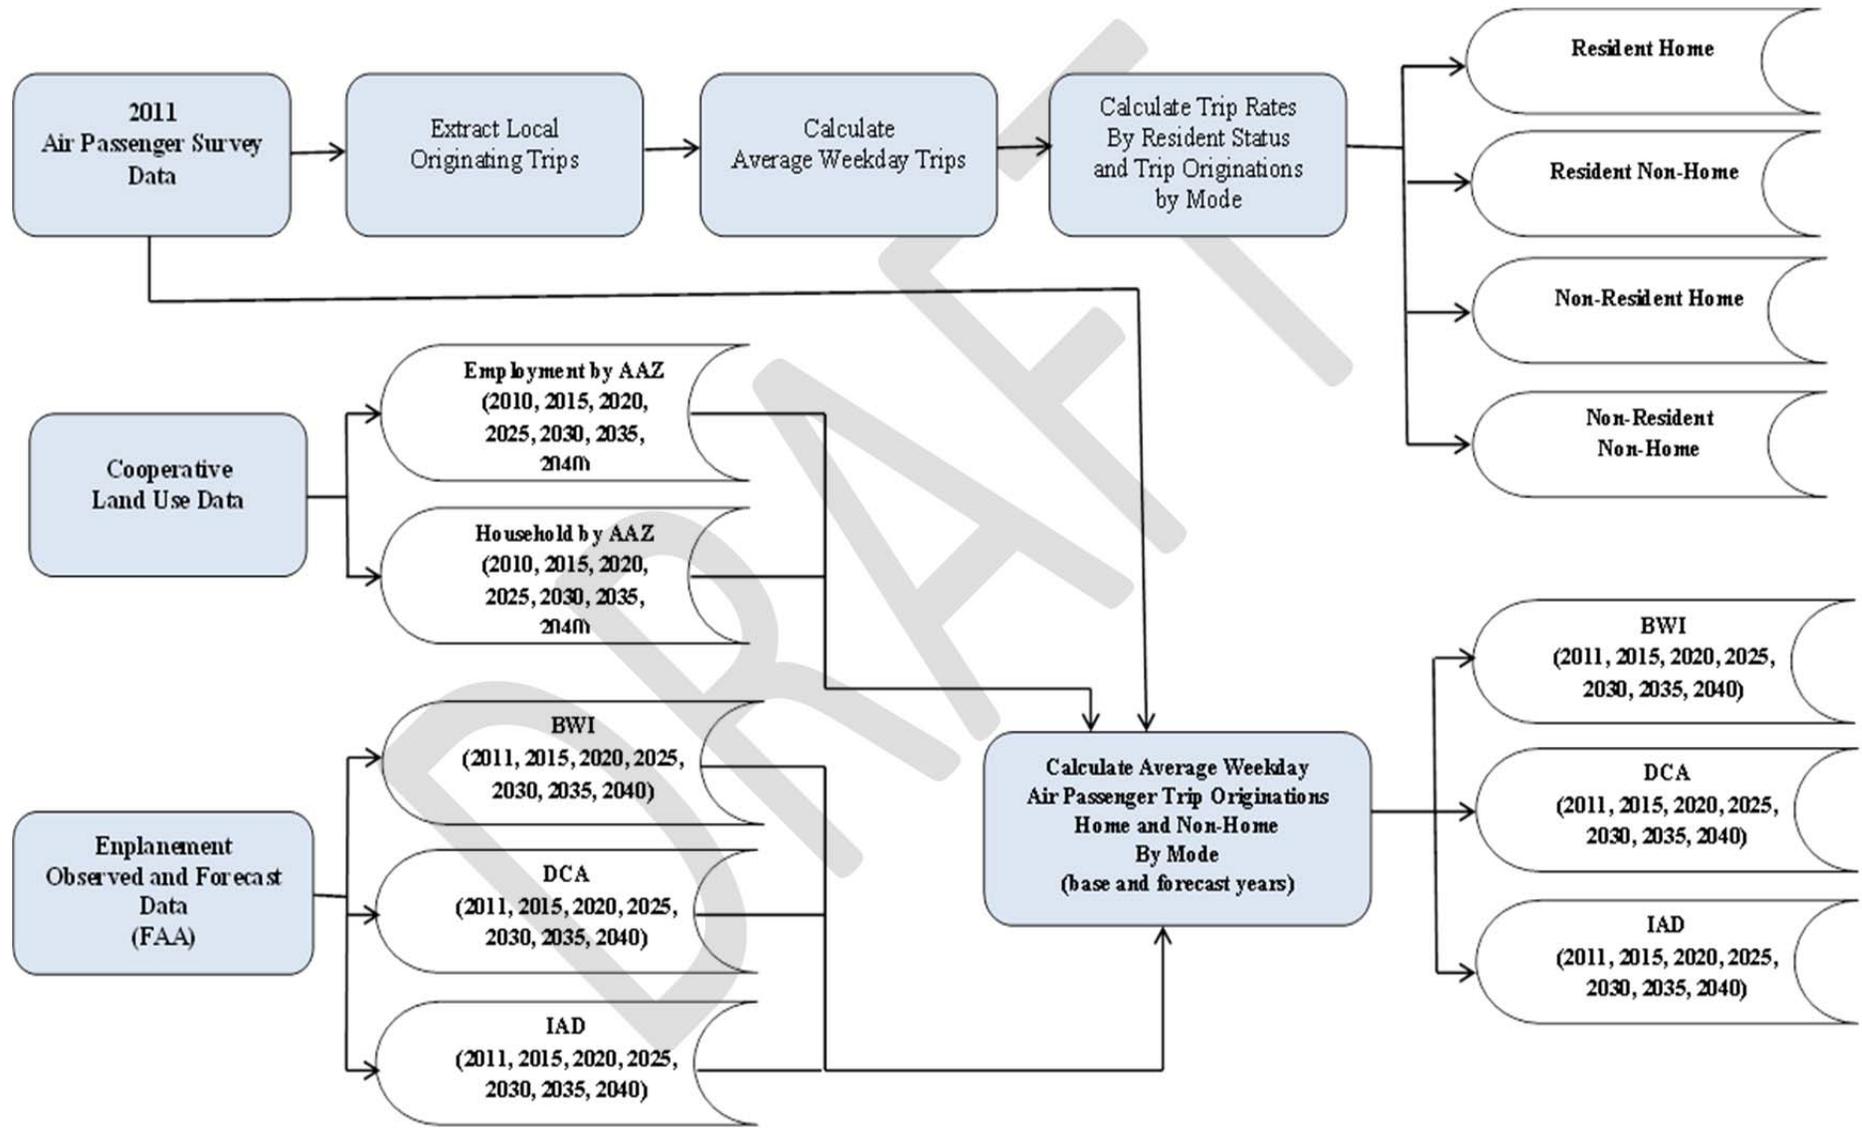

The update of air passenger ground access forecasts for Washington/Baltimore Air Systems Planning region was accomplished in a series of steps, illustrated in Figure 3. These steps were:

- Convert base year 2011 annual air passenger trips from Regional Air Passenger Survey to average weekday air passenger ground access trips.
- Summarize base year 2011 average weekday air passenger ground access trips by residential (home based) / non-residential (non-home based) trip origin type and area resident/non-resident status for each AAZ.<sup>2</sup>
- Summarize household and employment land activity data by new AAZ base year 2011 and all forecast years (2015, 2020, 2025, 2030, 2035 and 2040).
- Calculate base year 2011 air passenger ground access trip generation factors by home/non-home trip origin type and area resident/non-resident status for each airport-new AAZ pair.
- Calculate average weekday airport air passenger ground access trips to each airport for 2011 base year and all forecast years.
- Summarize base year 2011 weekday ground access trips by mode of arrival for each airport-new-AAZ-trip origin area type-resident-status classification.
- Calculate average weekday airport ground access trips by mode of arrival for 2011 base year and all forecast years.
- Calculate time-of-day split.

---

<sup>2</sup> In the context of air passenger ground access trips, a home-based trip refers to any airport ground access trip that begins at a private residence. For example, an airport ground access trip by a non-resident that begins at the home of friend or family member who lives in this region is considered to be a home-based trip, even though this starting location is not technically the “home” of the non-resident air passenger.

Figure 3:- Air Passenger Ground Access Forecast Procedure

## 1. Conversion of 2011 Air Passenger Survey Data to Average Weekday Air Passenger Ground Access Trips

The first step in the update of airport ground access trips was converting annual air passenger trips from the 2011 Washington/Baltimore Regional Air Passenger Survey to average weekday figures. This was accomplished by (1) slightly adjusting the annual air passenger survey weights to exactly match the year 2011 observed enplanements at the three commercial airports; (2) selecting only the survey records for local originating air passengers making an airport ground access trips on a weekday; and (3) dividing the adjusted annual survey weights for each air passenger trip record using the following formula:

$$\text{Average Weekday Air Passenger Ground Access Trips} = \frac{\text{Annual Weekday Ground Access Trips}}{260}$$

### A. Review of 2011 Air Passenger Survey data

23.8 million air passengers originated in the Washington-Baltimore Region in 2007 (See Table 1). Annual originations are further grouped into internal (local originating air passenger trips within the Washington-Baltimore Air System Planning Region), and external (local originating air passenger trips from areas outside the Washington-Baltimore Air System Planning Region), and are presented in Table 2.

**Table: 1 Annual Trip Originations by Airport (in Thousands)**

## B. Review of Air Passenger Enplanement Forecast

The FAA Office of Aviation Policy and Plans (APO) produces the Terminal Area Forecast (TAF). The TAF is the official forecast of aviation activity at FAA facilities. The TAF is produced each year covering airports in the National Plan of Integrated Airport Systems (NPIAS). The forecast is made at the individual airport level and assumes an unconstrained demand for aviation services. TAF data cover 264 FAA towered airports, 244 Federal contract tower airports, 32 Terminal Radar Approach Control (TRACON) facilities, and 2,828 non-FAA airports. Data in the TAF are presented on a U.S. government fiscal year basis (October 1 through September 30), and generally cover 10 years of history and 15 or more years of forecast.

Aviation activity forecasts for FAA-towered (which includes BWI, DCA, and IAD) and Federal contract towered airports are developed using historical relationships between airport passenger demand and/or activity measures and local and national factors that influence aviation activity. Forecasts at individual airports reflect to varying degrees national aviation trends as well as dynamics at individual airports.

National TAF forecast data are divided into nine regions; the Washington-Baltimore regional airports fall within the Eastern Region. This region accounted for 15 percent of total enplanements in 2010 and is forecasted to remain the same in 2040. The region includes 7 of the

29 large hub tower airports (an airport with one percent or more of total U.S. passenger enplanements) in the nation. Enplanements in this region are forecast to increase by 93 percent between 2010 and 2040, doubling at BWI Marshall and Dulles and by 42 percent at Reagan National. Washington Dulles International is projected to be one of the five airports with the fastest projected increase in enplanements growth over the next 30 years and also is projected to make the largest upward movement in ranking of enplanements, going from 21<sup>st</sup> to 14<sup>th</sup> during the same time period. Dulles International will also be gaining in ranking from 19<sup>th</sup> in 2010 with airport operations to 10<sup>th</sup> by 2040.

FAA's baseline scenario enplanement forecasts were obtained for forecast years 2010 through 2040. These forecasts are based on the U.S. Government fiscal year, which runs from October 1 through September 30. Converting FAA's 2013 – 2040 fiscal year forecast into calendar year (January 1 through December 31) forecasts were done by applying an annual percent increase to the 2010-2012 base years, January through December observed enplanement and for forecast years 2013 through 2040 to be the same as FAA's annual percent increase by airport. The average growth rate between 2013 and 2040 was 2.4 percent for BWI, 2.5 percent for IAD and for DCA 1.2 percent per year.

Tables 3, 4, and 5 present observed and forecasts of air passenger enplanements for the three airports in the Washington/Baltimore region. Observed air passenger enplanements for 2010 were obtained from observed monthly statistical data from MWAA for Ronald Reagan Washington National and Dulles International Airports, and from MAA for Baltimore/Washington International Thurgood Marshall Airport. Based on the findings from the 2011 Air Passenger Survey, local originating (originations within the Washington/Baltimore Air System Planning region ) passengers are 78 percent at BWI Marshall, 88 percent at Reagan National and 65 percent at Dulles International of the total passenger volume and are assumed to remain at a constant throughout the forecast period.

Tables 3, 4, and 5 present observed and forecast air passenger enplanements for the three airports in the Washington/Baltimore region. Air passenger enplanements for BWI, are presented in Table 3. MAA forecasted enplanements at BWI to reach over 18 million by 2030, almost double the 2005 volume.

Air passenger enplanements for the BWI Marshall airport, are presented in Table 3. Domestic destined enplanements at BWI are forecast to reach 21.6 million by 2040, an average annual increase of 2.4 percent, and international destined enplanements, with an average annual increase of 3.9 percent to 600 thousand by 2040.

**Table 3: BWI Marshall Airport Enplanements Forecast**

Year	Air Carrier	Domestic		International		Total	
		Commuter	Total	US Flag	Foreign Flag	Total	Enplanement
2010 <sup>1</sup>	10,316,365	484,943	10,801,308	88,189	107,216	195,405	10,996,713
2015 <sup>2</sup>	10,151,574	474,468	10,626,042	194,501	129,954	324,455	10,950,496
2020 <sup>2</sup>	11,779,815	520,261	12,300,076	219,202	146,458	365,660	12,665,736
2025 <sup>2</sup>	13,589,870	566,014	14,155,884	248,008	165,704	413,712	14,569,596
2030 <sup>2</sup>	15,678,055	615,790	16,293,845	280,597	187,478	468,075	16,761,920

2040 <sup>2</sup>	20,866,325	728,856	21,595,181	359,189	239,986	599,176	22,194,357

<sup>1</sup> Observed Years

<sup>2</sup> Forecast Years

Note:- Forecast based on FAA TAF Fiscal Year annual percent increase

At Ronald Reagan Washington National airport, enplanements are projected to reach 12.8 million by 2040, an increase of 42 percent over 2010. Domestic enplanements at DCA are forecast to reach 12.7 million by 2040, from 8.8 million in 2010, an increase of 43 percent. International service at DCA, unless the perimeter rule, changes, is limited to Eastern Canada, Bermuda, the Bahamas, and part of the Turks and Caicos Island. Hence there is little or no opportunity to increase international air passenger traffic. Total international enplanements at DCA are forecasted to decline by 27 percent from 158,000 in 2010 to 115,000 in 2040.

**Table 4: Ronald Reagan National Airport Enplanements Forecast**

Year	Air Carrier	Domestic		International		Total	
		Commuter	Total	US Flag	Foreign Flag	Total	Enplanement
2010 <sup>1</sup>	6,043,389	2,834,369	8,877,758	46,615	111,171	157,786	9,035,544

<sup>1</sup> Observed Years

<sup>2</sup> Forecast Years

Note:- Forecast based on FAA TAF Fiscal Year annual percent increase

Enplanements at Dulles International Airport are projected to reach more than 24 million by 2040, double when compared with 2010 volume. Table 5 shows observed, and FAA enplanements forecast for Dulles International Airport. Domestic destined enplanements are forecast to reach 15.8 million by 2040, an average annual increase of 2.5 percent, and international destined enplanements, with an average annual increase of 3.7 percent to 8.8 million by 2040.

### C. Market Segmentation

Based on the 2011 Washington-Baltimore Regional Air Passenger Survey data, enplanements were further grouped into local originations and internal originations. Table 6 shows the breakdown of these two types of originations by airport for base year and forecast years 2015 through 2040.

**Table 6: Regional Airports Annual and Local and Internal Trip Originations**

Year	Local Originations				Internal Originations			
	BWI	DCA	IAD	Total	BWI	DCA	IAD	Total
2010	8,580,691	7,928,207	7,649,818	<b>24,158,715</b>	7,548,371	7,811,181	7,258,564	<b>22,618,116</b>
2011	8,758,172	8,215,338	7,492,613	<b>24,466,123</b>	7,704,500	8,094,074	7,109,399	<b>22,907,973</b>

2030	13,079,258	10,200,298	11,883,124	<b>35,162,680</b>	11,505,728	10,049,734	11,275,355	<b>32,830,817</b>
2035	15,049,280	10,720,617	13,750,859	<b>39,520,756</b>	13,238,742	10,562,373	13,047,563	<b>36,848,679</b>
2040	17,318,167	11,267,476	15,925,595	<b>44,511,238</b>	15,234,665	11,101,161	15,111,071	<b>41,446,897</b>

Note:-

- Local originating trips are departing passengers whose trip starts from one of the region's three airports and does not include connecting passengers
- Internal originating trips are local originating trips within the Washington - Baltimore Air System Planning Area
- Local originating trips are calculated based on the 2011 Air Passenger Survey data to be 78% for BWI, 88% for DCA and 65% for IAD, of the total departing passengers.
- Internal originating trips are calculated based on the 2011 Air Passenger Survey to be 88% for BWI, 99% for DCA, and 95% for IAD, of the total local originating trips, that are within the 161 internal AAZ's.

## **5. Summarization of Base Year Air Passenger Ground Access Trips by Resident Status and Area Type**

The next step in the process was to summarize the average weekday ground access trip data for each airport (BWI, DCA, and IAD) by trip origin type and resident status for each new AAZ in the Air Systems Planning Region. Ground access trip data for all external AAZs were summarized into a single combined external AAZ record. The weekday ground access data were summarized into two trip origin types (home-based, non-home based) and two resident status types (resident, non-resident). Thus, this processing summarized the ground access trip data into four categories for each Airport-AAZ pair. These categories were:

- (1) Resident Status=**Resident**, Origin Type=**Home-based***
- (2) Resident Status=**Resident**, Origin Type=**Non-home based***
- (3) Resident Status=**Non-Resident**, Origin Type=**Home-based***
- (4) Resident Status=**Non-Resident**, Origin Type=**Non-home based***

The database produced by this summarization had a total of 1932 cells (3-airports x 161 AAZs x 4 Resident Status/Origin Type categories). Table 7 shows average weekday airport ground access trips for the entire Air Systems Planning Region summarized by these four categories. As shown in Table 7, residents and non resident trips were categorized into Home-Based (HB) and Non-Home-Based (NHB) trip purposes depending on the air passengers' trip origination, i.e., the starting point of the passenger's ground trip to the airport.

**Table 7: Average Weekday Air Passenger Ground Access Trips**

## 6. Summarize Land Activity Data for 2010 Base Year and Forecast Years

Household and employment land activity data for 2010 and forecasts through 2040 by small area TAZs were obtained from MWCOG (Metropolitan Washington Council of Governments) Round 8.1 and BMC (Baltimore Metropolitan Council) Round 7.2 Cooperative Forecasts. These TAZ-level data were aggregated to the internal AAZs shown in Figures 2.

Table 8 shows the combined MWCOG and BMC land activity forecasts summarized for the entire Air Systems Planning Region.

**Table 8: Household and Employment Forecast Summary**

### Household Forecast

Year	Household	Change	Percent Growth	
2010	3,159,157	-		
2015	3,363,864	204,707	2010 - 2015	6.5%
2020	3,553,276	189,412	2015 - 2020	5.6%
2025	3,728,913	175,637	2020 - 2025	4.9%
2030	3,875,745	146,832	2025 - 2030	3.9%
2035	4,002,979	127,234	2030 - 2035	3.3%
2040	4,114,488	111,509	2035 - 2040	2.8%

*Source:- MWCOG Round 8.1 and BMC Round 7.2 Cooperative Land Use Forecast*

### Employment Forecast

Year	Employment	Change	Percent Growth	
2010	5,084,030	-		
2015	5,404,785	320,755	2010 - 2015	6.3%
2020	5,791,114	386,329	2015 - 2020	7.1%
2025	6,122,830	331,716	2020 - 2025	5.7%
2030	6,401,899	279,069	2025 - 2030	4.6%
2035	6,624,866	222,967	2030 - 2035	3.5%
2040	6,837,100	212,234	2035 - 2040	3.2%

*Source:- MWCOG Round 8.1 and BMC Round 7.2 Cooperative Land Use Forecast*

## 7. Calculate Air Passenger Ground Access Trip Generation Factors

Once the air passenger ground access trip and land activity data were summarized, trip generation factors were calculated for each Airport/AAZ/trip origin type/resident-status classification using the following formulae:

### A. Resident Home-based Trip Origin factor for Airport<sub>(A)</sub> AAZ<sub>(X)</sub> =

$$\text{Resident Home-based Trip Origin Factor} = \frac{\text{Total Resident Home-based Trip Origin Trips (AAZ}_X\text{) (Year 2007)}}{\text{Total Households (AAZ}_X\text{) (Year 2007)}}$$

### B. Resident Non-home based Trip Origin factor for Airport<sub>(A)</sub> AAZ<sub>(X)</sub> =

$$\text{Resident Non-home based Trip Origin Factor} = \frac{\text{Total Resident Non-home based Trip Origin Trips (AAZ}_X\text{) (Year 2007)}}{\text{Total Employment (AAZ}_X\text{) (Year 2007)}}$$

### C. Non-Resident Home-based Trip Origin factor for Airport<sub>(A)</sub> AAZ<sub>(X)</sub> =

$$\text{Non-Resident Home-based Trip Origin Factor} = \frac{\text{Total Non-Resident Home based Trip Origin Trips (AAZ}_X\text{) (Year 2007)}}{\text{Total Households (AAZ}_X\text{) (Year 2007)}}$$

### D. Non-Resident Non-Home based Trip Origin factor for Airport<sub>(A)</sub> AAZ<sub>(X)</sub> =

$$\text{Non-Resident Non-Home based Trip Origin Factor} = \frac{\text{Total Non-Resident Non-home based Trip Origin Trips (AAZ}_X\text{) (Year 2007)}}{\text{Total Employment (AAZ}_X\text{) (Year 2007)}}$$

**Table 9: Home and Non-Home Trip Rates by Resident Status**

<b>Trip Rates</b>				
<b>Airport</b>	<b>Resident</b>		<b>Non-Resident</b>	
	<b>Home</b>	<b>Non-Home</b>	<b>Home</b>	<b>Non-Home</b>
<b>BWI</b>	0.60775	0.05088	0.19624	0.19169
<b>DCA</b>	0.61875	0.042	0.2133	0.33175
<b>IAD</b>	0.56084	0.02189	0.18935	0.16928

## **8. Calculate Air Passenger Ground Access Trips for 2011 and Forecast Years**

Ground access trips for 2011 through 2040 were calculated by multiplying base year and forecast year household and employment data by the appropriate trip generation factors and adjusting the resultant product to be consistent with local air passenger originations estimated from approved MWAA and MAA totals for each airport. For each airport-AAZ combination, (1) air passenger ground access trips by residents with home-based trip origin types were calculated by multiplying AAZ households by the resident home-based trip origin trip generation factor; (2) air passenger ground access trips by residents with non-home-based trip origin types were calculated by multiplying AAZ employment by the resident non-home based trip origin trip generation factor; (3) air passenger ground access trips by non-residents with home based trip origin types were calculated by multiplying AAZ households by the non-resident home-based trip origin trip generation factor; and (4) air passenger ground access trips by non-residents with non-home based origin types were calculated by multiplying AAZ employment by the non-resident non-home based trip origin trip generation factor. The resultant products for each AAZ-origin type-resident-status classification were then summed by airport-AAZ pair and totaled for each airport. This total was then divided by a previously determined MWAA and MAA control total for local passenger originations at that airport to obtain a MWAA and MAA adjustment factor. This adjustment factor was then applied to all airport-AAZ pairs to ensure that the sum of the calculated ground access trips by AAZ for that airport would match the approved MWAA and MAA forecasts.

Table 9 shows calculated 2010 to 2040 air passenger average weekday ground access trips totals by airport for the entire Air Systems Planning Region. Detailed 2011 to 2040 average weekday air passenger ground access trips by AAZ are presented in Appendix A.

**Table 10: Average Weekday Air Passenger Ground Access Trips**

Forecast Year	Airports			Total
	BWI	DCA	IAD	
2010	21,183	23,769	20,505	65,457
2015	20,674	25,418	20,577	66,669
2020	23,922	26,716	23,713	74,351
2025	27,503	28,087	28,132	83,722
2030	31,641	29,500	32,526	93,667
2035	36,535	30,938	37,810	105,283
2040	41,884	32,604	43,598	118,086

**9. Summarize 2011 Base Year Air Passenger Ground Access Trips by Mode of Arrival**

The next step in the process was to summarize the average weekday ground access trip data from the 2011 Air Passenger survey by mode of arrival for each Airport-AAZ pair by trip origin type and resident status. The ground access trip data were summarized into four major arrival modes as follows:

- Auto = *Private Car, Rental Car and Taxi*
- Transit = *Metrorail , Amtrak/MARC/VRE and Light Rail*
- Airport Transit = *Airport Bus/Limo and Hotel/Motel Courtesy*
- Other = *Charter Bus, Employer Shuttle, and All Other*

The auto mode of arrival was further split into two sub-categories:

- *Auto Driver*
- *Auto Passenger*

The split of auto ground access trips into auto driver and auto passenger trips was determined from the air passenger survey question that asked for the total number of household members, friends, or business associates that traveled with the surveyed air passenger to the airport. From this question the total vehicle occupancy of air passengers arriving at the airport by private or

rental cars could be determined. The reciprocal of this number yields the proportion of air passengers who were likely auto drivers. The complement of this reciprocal yields the proportion of air passengers who were likely auto passengers. Multiplying the survey record weights by these proportions produces estimates of the number of air passengers who were auto drivers and the number of air passengers who were auto passengers for these auto ground access trips. Air passengers arriving at the airport by taxi are by definition auto passengers.

Once the ground access mode of arrival trip data were summarized, modal shares for Auto Driver, Auto Passenger, Transit, Airport Transit and Other arrival modes were calculated for each Airport/AAZ/trip origin type/resident status classification.

**A. Calculate Air Passenger Ground Access Trips by Mode for 2011 Base Year and Forecast Years**

Air passenger ground access trips to BWI airport by mode of arrival for 2011 through 2040 were estimated by multiplying respective year ground access trips for each BWI-AAZ/trip origin type/resident status classification by the base year modal shares for that classification.

Air passenger ground access trips to DCA and IAD airports by mode of arrival were estimated in the same way as was done for BWI airport. For forecast year 2015 and beyond, however, initial estimates of ground access trips by mode of arrival were further adjusted to take into account the planned opening of the Metrorail extension to IAD anticipated in 2015.

The adjustment for IAD was made by taking the 2015 Metrorail air passenger ridership projection from the Dulles Extension FEIS (Final Environmental Impact Statement) Patronage Forecast Report (November 2004) for the Dulles Airport station and allocating this air passenger-related ridership to selected AAZs in the Air System Planning region. This allocation was based upon an examination of the air passenger ground access trips by Metrorail to DCA in 2007, the characteristics of the AAZs from which these DCA Metrorail ground access trips were made, and the modal share of each ground access mode to DCA from these AAZs. No independent mode choice modeling was done and professional judgment was used to allocate the

FEIS Metrorail ridership projection to individual AAZs and adjusting the other ground access modal share percentages from these AAZs to IAD accordingly. These adjusted modal shares were then applied to total ground access trips to IAD by AAZ for 2015, 2020, 2025 and 2030 to obtain final adjusted estimates of ground access trips by mode for these forecast years.

Adjustments to initial estimates of DCA air passenger ground access trips to take into account the expected opening of the Dulles Extension in 2015 were fairly limited in geographic scope because the Vienna Metrorail line and other lines throughout the region already well serve DCA. Thus, adjustments to modal shares were only made for a few select AAZs in the Tysons/Dulles Corridor (AAZs 43, 44, 45, 89, 91 and 92). Again, no mode choice modeling was done and professional judgment was used in making these adjustments. These adjusted modal shares were then applied to total air passenger trips to DCA from these selected AAZs for 2015, 2020, 2025 and 2030 to obtain final adjusted estimates of ground access trips by mode for these forecast years. Table 11 and figure 4 show air passenger ground access forecast to each airport by mode for the base and forecast years.

**Table 11: Average Weekday Air Passenger Ground Access Trips by Mode**

**BWI**

Year	Auto Driver	Auto Passenger	Transit	Airport Transit	Other	Total
2010	12,443	5,232	1,105	2,122	282	21,183

## 10. Time-Of-Day Split

The 2011 air passenger survey data has scheduled flight time for the survey records. Two separate time-of-day split factors were developed using the survey data. Time-of-day is calculate, as a percent of total trips departing one-hour and/or two hours before the flight time, and is shown in Table 12. These are:

### One-Hour before flight time:-

1. AM trips = flight time 700 to 1000 (7:00 AM to 10:00 AM).
2. PM trips = flight time 1600 to 1900 (4:00 PM to 7:00 PM).
3. Off-Peak trips = flight time 600 to 700, 1000 to 1600, and 1900 to 2400.  
(6:00-7:00 AM, 10:00 AM-4:00 PM, and 7:00 -12:00 PM).

### Two-Hours before flight time:-

1. AM trips = flight time 600 to 900 (6:00 AM to 9:00 AM).
2. PM trips = flight time 1500 to 1800 (3:00 PM to 6:00 PM).
3. Off-Peak trips = flight time 900 to 1500, and 1800 to 2400.  
(9:00 AM-3:00 PM, and 6:00 12:00 PM).

**Table 12: Average Weekday Air Passenger Ground Access Trips  
by Time of Day by Airport**

## **11. Summary and Conclusion**

The update of forecast air passenger ground access trips to the region's three commercial airports is an important step in the airport system planning process. This report documents the CASP update of forecast ground access trips to BWI, DCA and IAD airports from Aviation Analysis Zones (AAZ) in Washington/Baltimore Air Systems Planning Region. These forecasts are detailed by major mode of arrival at each airport for 2011 and by 5-year intervals for the through 2040 forecast period. Although no independent mode choice modeling has been performed in this study, these forecasts have been adjusted based on the ridership projection from the Dulles Extension FEIS Patronage Forecast to account for the anticipated impact on air passenger ground access travel to Dulles Airport resulting from the planned opening of the Dulles Metrorail line extension in 2015.

These ground access forecasts will be used as inputs for the CLRP update and as the basis for revising the Ground Access Element of the CASP Regional Airport System Plan, both scheduled to occur in 20104.

The ground access forecast, developed in this update by AAZ represent 4,374 Transportation Analysis Zones (TAZ). Of the 161 AAZ's in the study area, 132 are within the MWCOG planning region. Therefore, the ground access forecasts are further disaggregated into the 3,675 TAZ's in the MWCOG planning area by mode and time-of-day as an input to the regional travel demand model process.
