## Transportation Safety Planning Boot Camp

- Sponsored by FHWA and SHA
- Held on April 28<sup>th</sup>
- Workshop format
- Participants from SHA, MHSO, FHWA, and MPOs

Jon Schermann

Department of Transportation Planning

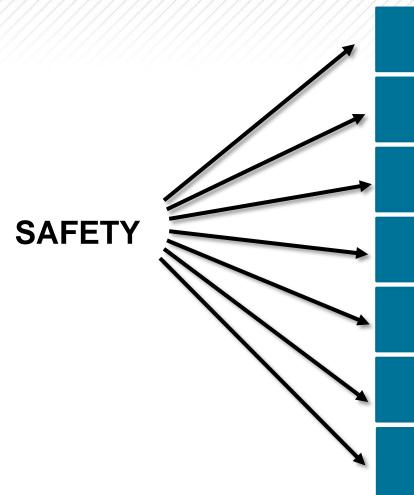

## Workshop Purpose

- Discuss transportation safety for all modes, current and future
- Learn strategies for better incorporating safety into the planning process, also known as transportation safety planning (TSP)

- Brainstorm and identify methods for better integrating safety into YOUR transportation planning and programming documents
- Coordinate transportation safety planning activities
- Learn from each other!

## **Transportation Safety Integration**

### **Planning Tasks**

Public involvement and outreach

Multidisciplinary coordination and input

Data collection and analysis

Development of goal and objective

Identification of performance measures and targets

Project prioritization and programming

Monitoring and evaluation

## **Seven Transportation Safety Principles**

- Include safety data and/or discussions in public and stakeholder engagement activities
- Discuss safety at committee meeting or identify opportunities to engage safety stakeholders in transportation plans
- Collect and analyze crash and roadway data to identify transportation safety goals, objectives, and project priorities
- Utilize public and stakeholder input, the results of data analysis, and information in other plans to develop safety goals and objectives in planning documents
- Identify safety performance measures and targets to track progress towards the safety goals and objectives
- 6 Establish safety as a decision factor for the selection of transportation projects
- Routinely track and monitor safety performance and evaluate safety programs and policies

### How and Where to Incorporate Safety Principles

Traditional Transportation Planning Process

Multidisciplinary Collaboration

Develop the Vision, Goals, and Objectives

Establish System
Performance Measures
and Targets

Identify Transportation
Improvement Strategies
and Alternatives

Evaluate and Prioritize the Strategies

How/where to incorporate safety into transportation planning

Discuss safety at committee meeting or identify opportunities to engage safety stakeholders in transportation planning

Utilize public and stakeholder input, the results of data analysis, and information in other plans to develop safety goals and objectives in planning documents

Identify safety performance measures and targets to track progress towards the safety goals and objectives

Collect and analyze crash and roadway data to identify transportation safety goals, objectives, and project priorities

Use the outputs of the data analysis to shape safety goals, objectives, performance measures, and inform project/program selection

Establish safety as a decision factor for the selection of transportation projects by including safety as a goal in the LRTP and considering it in the scoring and ranking process

## How and Where to Incorporate Safety Principles (continued)

Develop the Long-Range Transportation Plan (S/TIP)

Incorporate safety goals and objectives and results of the safety analysis into the LRTP

Develop the Transportation | Improvement Program (S/TIP)

Use safety data and performance measures to help prioritize programs and projects identified in the LRTP

Undertake Project Development

Design standalone safety projects and consider safety elements in the analysis and design for TIP projects

Implement Projects

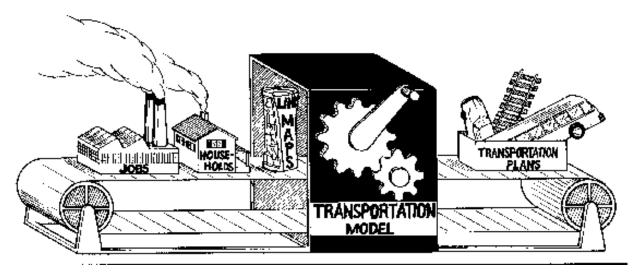

Construct standalone safety projects and incorporate safety elements into other TIP projects

Monitor and Evaluate System Operations

Routinely track and monitor safety programs and projects to evaluate successes or identify course corrections, assess progress towards performance targets, and use tracking information to continually revise and refine the entire planning process

### A Planner's Role in TSP

- Connection to decision-makers
- Service to member agencies
- Analytic skills and tools
- Commitment to the public good
- Holistic perspective of the transportation network Plan integration
- Ability to prioritize and program regional transportation investments

# How to Incorporate Safety Decisions Into Transportation Plans

- Bring safety into the conversation
- Crash locations (intersections, spot, corridors, pedestrian)
  - » Where are crashes occurring and why (past data)
  - » Where are potential areas for improvements (predictive tools)
  - » Identify solutions (countermeasures/policies/project prioritization) to reduce crashes
- Customize and adopt relevant SHSP strategies
- Risk Factors and Systemic Safety
  - » What predominant roadway types or characteristics are unsafe
  - » Identify solutions

# How to Incorporate Safety Decisions Into Transportation Plans

- Transportation Safety Policies
  - » Complete Streets
  - » Bicycle/Ped Design
  - » Access Management
- Transportation Safety Programs
  - » Safe Routes to School
  - » Behavioral Campaigns
- Project Prioritization
  - » Safety checklists
  - » Safety evaluation criteria

## **Action Planning**

#### Data Collection and Analysis Action Plan Worksheet

	Please indicate, using the scoring below, the extent to which you do the following									
	activities r	activities now or plan to in the future:								
+										
	Score	0	1	2	3	4				
		Not	Interested in	Interested in	Plan to implement this	Already				
		interested in	strategy, but	strategy and	strategy	implement this				
		strategy	do not have	may be able		strategy and plan				
			staff or	to identify		to continue				
			financial	staff or						
			resources to	financial						
			implement	resources to						
				implement						
				1 1						

Strategies	Score (see table above)	Resources, Tools, Coordination, and/or Funding Needed to Implement (or continue implementing) Strategy
Obtain crash data for state roads		
Obtain crash data for non-state roads		
Obtain roadway data for state roads		

## **Data Collection and Analysis**

## Planning Task ——— Safety Integration

Data Collection and Analysis

Identify regional trends and issues

 Collect and analyze safety data (crash, volume, roadway) to identify goals, objectives, and project/ program priorities.

# Understanding Safety in a State or Region

#### 1. Develop Benchmarks

- Evaluate MAP-21 Performance Measures: Number and rate of fatalities & serious injuries
- Evaluate Additional MPO Performance Measures (e.g., pedestrian and bicycle fatalities)

#### 2. Evaluate Crash Trends and Characteristics

- •Who: Driver Age, Gender
- •What: Number and Type of Vehicles Involved
- •Where: Crash Distribution by TAZ, Urban/Rural Geography, Route type, or Intersections
- •When: Year, Month, Day, Hour
- •Why: Behavioral and Environmental Factors

#### 3. Identify and Evaluate Focus Crash Types

- •Manner of Collision: Rear-End, Run off Road, Angle, Sideswipe, Head-On, Pedestrian, Bicyclce, etc.
- •Selection of Focus Crash Types
- •Geographic Distribution of Focus Crash Type
- Evaluation of Risk Factors

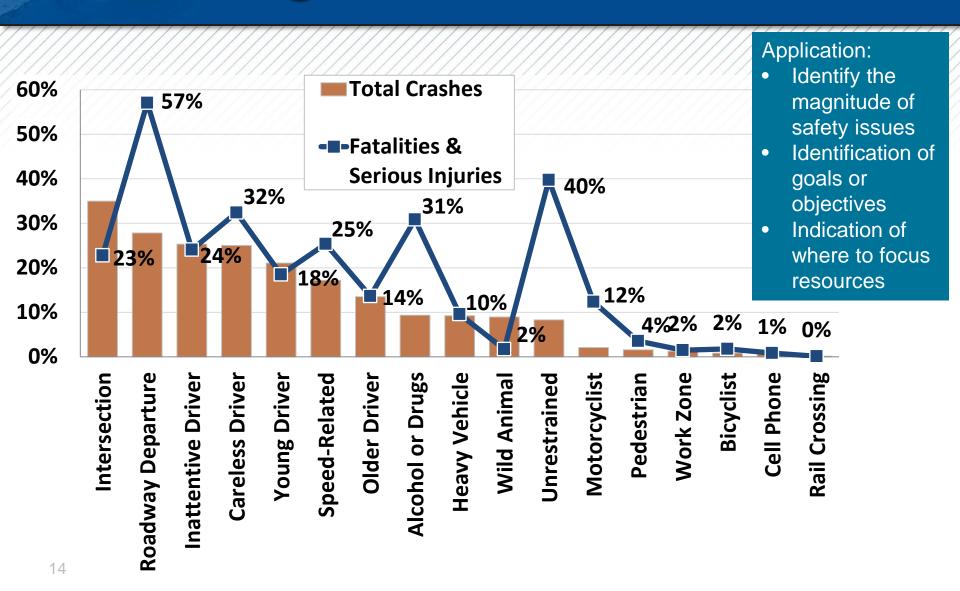

#### 4. Identify and Implement Countermeasures

- •Identify appropriate countermeasures for focus crash types
- •Identify potential locations for implementation of countermeasures
- Work with engineering staff to implement countermeasures

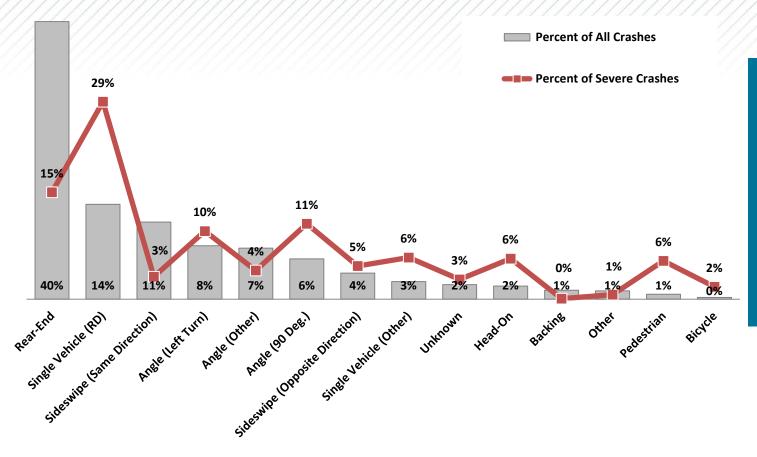

## Data Analysis – What Methods to Use?

Questions	Category of Analysis	Data Needs
What are the crash trends?	Descriptive statistics: counting of crash frequency severity and type.	Crash data, person data, incident data, roadway functional classification
What are the risk factors?	Systemic analysis to identify roadway or system characteristics that are over-represented in crash trends	Crash data, roadway characteristics, traffic volume
Where are the locations with potential for safety improvement?	Network screening to identify specific sites	Crash data, roadway characteristics, traffic volume
What happens if we change a feature of the	Apply crash modification factor	Observed crashes, roadway characteristics, traffic
roadway cross section?	Apply HSM predictive method (using spreadsheet or IHSDM, or hand calcs); fundamental element of the HSM is SPF	volume
How many crashes are expected on this type of facility?	Apply HSM predictive method	Observed crashes, roadway characteristics, traffic volume
What is the change in crash frequency or severity associated with a specific treatment?	Before-after study (aka safety effectiveness evaluation, or estimating a crash modification factor)	Crashes before, crashes after, roadway characteristics
What treatment should be built at this location?	Descriptive statistics, identify potential contributing factors, collision diagrams,	Observed crashes, roadway characteristics, traffic volume, field evaluation
What are the benefits of a change in the network?	Change in crash frequency with CMF or HSM Predictive method	Observed and estimated crash frequency and severity, crash costs, 20-year economic b/c analysis or  Cost effectiveness analysis – change in crashes per dollar spent
Macro –level Questions: What happens at a	Macro-level safety prediction – calculate SPFs on	Socio economic data, regional network data, crash
regional level if we change land use, add a lane	planning level variables	data, traffic volume data
on a freeway section, how do we prioritize		
spending?		

## **Contributing Factors**

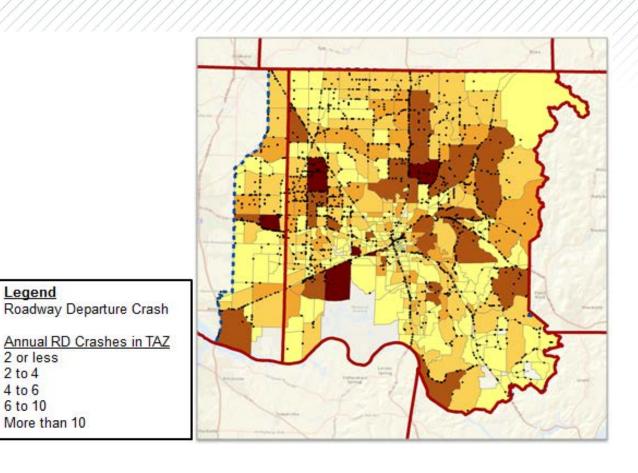

## **Crash Types**

#### Application:

- Identify the magnitude of safety issues
- Identification of goals or objectives
- Indication of where to focus resources

## **Crash Types** Single Vehicle RD Crashes by TAZ

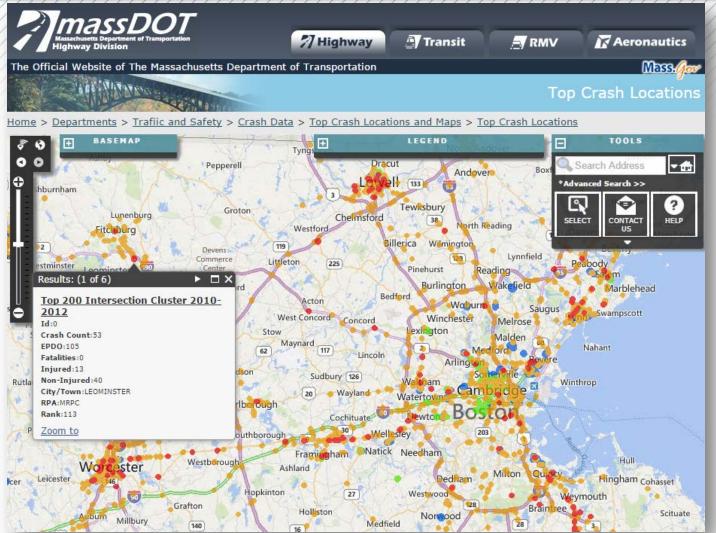

#### Application:

- Visual to share with stakeholders
- Indication of where to focus safety programs/proj ects

Legend

2 or less 2 to 4 4 to 6 6 to 10 More than 10

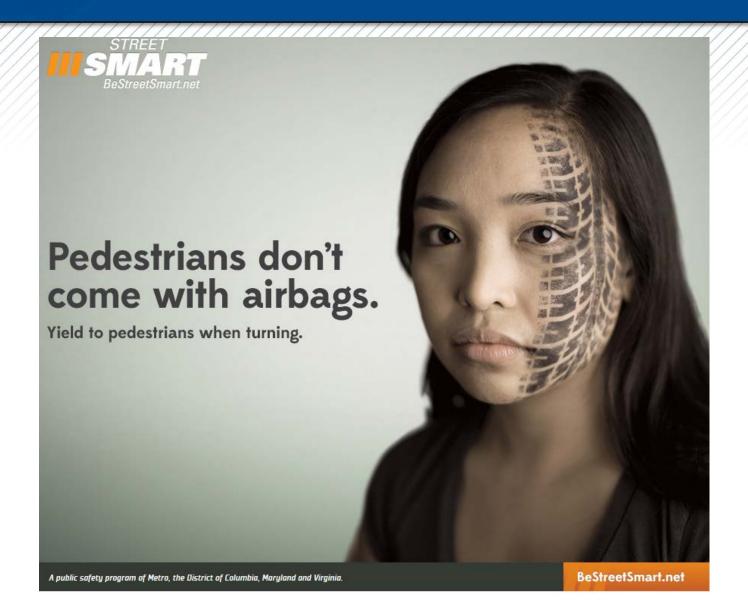

## **High Crash Locations**

#### Application:

- Visual to share with stakeholders
- Indication of priority segments, locations, or intersections
- Tool to assist with safety project identification
- Tool to assist with the inclusion of safety in all transportation projects

## Project Prioritization and Programming Behavioral Projects

## **Takeaways**

- Safety reference materials
- Detailed information on methods MPOs can use to address safety throughout the planning process
  - » We are doing some of them
  - » We will need to identify which of the rest we could/should do given the staff resources available
- Expanded contacts with SHA and MHSO personnel
