

ITEM 11 - Information

October 19, 2011

Briefing on the Draft Air Quality Conformity Assessment of the 2011 CLRP

Staff Recommendation: Receive briefing on the enclosed draft conformity analysis of the 2011 CLRP.

Issues: None

Background: This conformity assessment and draft plan are scheduled to be released for public comment on October 13. The TPB will be asked to adopt the plan and conformity assessment at its meeting on November 16.

DRAFT

National Capital Region Transportation Planning Board

777 North Capitol Street, N.E., Suite 300, Washington, D.C. 20002-4290 (202) 962-3310 Fax: (202) 962-3202

MEMORANDUM

October 12, 2011

To: **Transportation Planning Board**

From: **Jane Posey**
Senior Transportation Engineer

Subject: Air Quality Conformity Assessment for the 2011 Update of the Constrained Long Range Plan (CLRP)

INTRODUCTION

This memo documents summary results of the air quality conformity assessment of the 2011 CLRP with respect to the following pollutants:

- **Ozone Season Volatile Organic Compounds (VOC) and Nitrogen Oxides (NOx).** Ozone season pollutants must not exceed EPA approved totals from the Metropolitan Washington Air Quality Committee's (MWAQC's) Motor Vehicle Emissions Budgets (MVEBs) from the 8-hour Ozone State Implementation Plan (SIP). MWAQC adopted the 8-hour ozone SIP in May, 2007, and on September 4, 2009, EPA found adequate the 2008 Reasonable Further Progress (RFP) budgets, and stated that the Metropolitan Washington region must use these budgets for future conformity determinations for the 8-hour ozone standard. The RFP budget for VOC is 70.8 tons/day, and for NOx is 159.8 tons/day. Ozone season pollutants will no longer be assessed against 1-hour ozone budgets.
- **Fine Particles (PM_{2.5}).** In the absence of approved budgets EPA, allows for an assessment that shows emissions in "action" scenarios are no greater than those in a 2002 base. This criterion was established and applied, with the concurrence of MWAQC, in prior PM_{2.5} conformity assessments.
- **Wintertime Carbon Monoxide (CO).** The region is in maintenance for mobile source wintertime CO, and is required to show that pollutants do not exceed the approved budget of 1671.5 tons/day.

The analysis shows that mobile emissions are well within the mobile budgets for ozone season VOC and NOx, as well as wintertime CO, and are well below the 2002 base year levels for the PM_{2.5} pollutants.

The results, based upon analyses contained in the technical report, Air Quality Conformity Determination Of The 2011 Constrained Long Range Plan For The Washington Metropolitan

Region, were released for public comment and interagency consultation on October 13, 2011. The public comment period is scheduled to end on November 12, 2011.

BACKGROUND

The Transportation Planning Board (TPB) approved the scope of work and the project submissions for the 2011 CLRP air quality conformity analysis on March 16, 2011.

Key technical inputs to the analysis include:

- Round 8.0a Cooperative Land Activity Forecasts
- The Version 2.3 Travel Demand Model including a 3722 Transportation Analysis Zones (TAZ) area system and updated transit service
- New Project Submissions
- 2008 Vehicle Registration Data
- EPA's Mobile6.2 Emissions Factor Model.

WORK ACTIVITIES

Staff prepared inventories for each pollutant for five forecast years (2002, 2016, 2020, 2030 and 2040). Ozone season pollutants (VOC and NOx) and wintertime CO are inventoried for average weekday conditions, and precursor NOx and direct PM_{2.5} are inventoried to reflect emissions on a yearly total basis. Staff applied seasonal adjustment factors to convert daily travel (annual average weekday traffic or AAWDT) to annual values.

These inventories address a primary conformity assessment criterion to demonstrate that emissions associated with the plan do not exceed the approved budgets. In anticipation of possible emissions increases associated with implementation of the plan, staff (in conjunction with the TPB Technical Committee and its Travel Management Subcommittee) conducted parallel analyses of committed and potential new transportation emissions reduction measures (TERM)s, and documented emissions benefits for each analysis year.

Plan Amendments

Attachment A lists the major changes to the conformity project inputs since the 2010 CLRP.

Land Activity Forecasts

The COG Board approved Round 8.0 Cooperative Forecasts in November, 2010. The forecasts reflect both the small area land use distributions throughout the Washington region, and also the latest planning assumptions for areas that are outside the Washington region. When the Baltimore Metropolitan Council recently updated its land use data, COG included those data in a new round of cooperative forecasts, Round 8.0a. The new data were used for the conformity analysis of the 2011 CLRP. Attachment B shows a summary of the Round 8.0a data.

Travel Modeling Process

The new Version 2.3 travel demand model was used for the first time in an air quality conformity analysis. The model includes a finer-grain zone system (3722 instead of 2191 TAZs) and a more detailed street base than that of the Version 2.2 model. Staff completely re-calibrated and re-validated the new model using the 2007/2008 household survey, numerous on-board transit surveys, 2007 Highway Performance Monitoring System (HPMS) traffic count data, and 2007 American Community Survey (ACS) data. The new model, reviewed extensively by the Travel Forecasting Subcommittee, contains numerous upgrades and additional technical parameters, enabling an improved analysis of travel in the region. For more information, review the December 2010 presentation to the TPB Technical Committee, or the Version 2.3 model documentation, both of which are located on the COG website.

In addition, in this air quality conformity assessment the definition of what constitutes a “regionally significant” project was changed. In the past, any project that changed any link in the regional highway or transit network was considered “regionally significant”. The new definition maintains the same threshold for “regional significant” as in the past, but accounts for the finer-grain zone system and more detailed street base. Attachment C contains a technical memo about regional significance.

Staff prepared travel demand forecasts for each of the analysis years using the Version 2.3 travel demand model. Exhibit 1 presents the geographic areas for travel modeling and for emissions reporting for each pollutant. Exhibit 2 presents the resulting average weekday transit trips, vehicle trips, and vehicle miles traveled (VMT) results through time for each conformity analysis year, for the full modeled area.

Emissions Factors

Staff developed emissions factors using EPA’s MOBILE6.2 emissions model. Emissions rates for each pollutant – shown illustratively for Fairfax County in Exhibits 3 and 4 -- were developed following execution of the model in one mph speed increments, by jurisdiction, for each analysis year. The chart shows significantly reduced rates through time, primarily due to the impacts of having cleaner fuel and vehicles in the fleet. Exhibit 5 presents direct PM_{2.5} emissions rates through time for each of the three seasons; data are arrayed in a bar chart since these emissions rates do not vary by vehicle speed.

Mobile Emissions Inventories

Ozone Season and Wintertime CO – Daily Emissions

The average annual weekday travel forecasts (AAWDT) generated by the travel demand model were adjusted, using a 1.03 ozone season factor or a 0.96 winter season factor, to develop seasonally appropriate VMT estimates. Staff then applied the appropriate Mobile6.2 emissions factors to the travel demand forecasts to prepare mobile source emissions inventories for each forecast year. These emissions results for ozone season pollutants are summarized in Exhibits 6 and 7 and indicate total VOC and NOx emissions for each analysis year. The charts show dramatic reductions throughout the period. Historical emissions reductions from the Clean Air Act amendments 1990 base have been well documented in the past. 2040 VOC and NOx emissions represent about 13 percent and less than

9 percent, respectively, of their 1990 levels. The results reflect the impact of the cleaner fuel / fleet and related programs.

PM_{2.5} – Yearly Emissions

To develop the yearly total PM_{2.5} emissions, travel and emissions were estimated by applying (three) seasonal factors to the primary travel data, followed by applying emissions rates for each of the seasons, and summarizing to obtain yearly totals. Direct PM_{2.5} and precursor NOx emissions are shown in Exhibits 8 and 9. The emissions reductions through time are largely attributable to Tier II vehicle standards, cleaner fuels, and the heavy duty engine rule.

2011 CLRP Emissions Inventories vs. Budgets

Exhibits 6-9 display net emissions in comparison to emissions budgets for each forecast year. The charts show that emissions are within the mobile budgets (including budgets not yet approved by EPA) for each pollutant, for all forecast years. Wintertime CO emissions (contained in a full technical report but not summarized here) are also within the CO emissions budget.

Exhibits 8 and 9 show that both direct PM_{2.5} and precursor NOx emissions are much lower than base year 2002 conditions and are within the proposed mobile budgets, for all forecast years, satisfying this additional conformity assessment criterion for PM_{2.5}.

Net Emissions Analysis

The emissions inventory data contained in Exhibits 6-9 reflect total mobile source network and off-network emissions. However, there are also emissions benefits associated with certain other transportation programs and projects. These benefits, estimated on an off-line basis, are also creditable in conformity analyses. Attachment D represents a summary table of these transportation emissions reduction measures, or TERMS, which have been previously planned or programmed by the TPB. They are arrayed in a ‘Tracking Sheet’ format to document the implementation status of each, with part A of the table documenting ozone season and part B documenting PM_{2.5} pollutants. The summary result of these measures, shown as the bottom line for each section of the table, amounts to additional reductions in each of the pollutants. Only those projects which have been affirmed by the implementing agency as having been completed, or are on a realistic schedule towards implementation, are being credited in this emissions analysis. Combining the emissions results in Exhibits 6-9 with the additional reductions from TERMS would further improve the emissions margins for each pollutant.

SUMMARY

The analytical results described in this air quality assessment provide a basis for a determination by the TPB of conformity of the 2011 CLRP.

Significant Additions and Changes to The 2011 Update to the Financially Constrained Long-Range Transportation Plan

Significant Additions and Changes to the CLRP

1. H STREET, NW PEAK PERIOD BUS-ONLY LANE
2. CRYSTAL CITY – POTOMAC YARD STREETCAR
3. I-395/I-95 HOV AND HOT LANES PROJECT LIMIT CHANGES *
4. I-395 HOV LANES REVERSIBLE RAMP FROM/TO SEMINARY ROAD*
5. WIDENING OF US 1 PROJECT LIMIT CHANGE
6. WIDEN I-66 GENERAL PURPOSE AND HOV LANES*

* These projects were approved as amendments to the 2010 Update to the CLRP on July 18, 2011.

DISTRICT OF COLUMBIA

1. H Street, NW Peak Period Bus-Only Lane from 17th St. to New York Ave.

H Street NW is one-way, running eastbound between 17th Street and New York Avenue. Parking restrictions are in effect on both sides of the street during morning (7:00 – 9:30 a.m.) and evening (4:00 – 6:30 p.m.) peak periods, allowing for five lanes of traffic. This project proposes to use one of those five lanes as a bus-only lane during the peak periods.

Complete: 2012
Length: 0.5 mile
Cost: \$250,000
Funding: Local

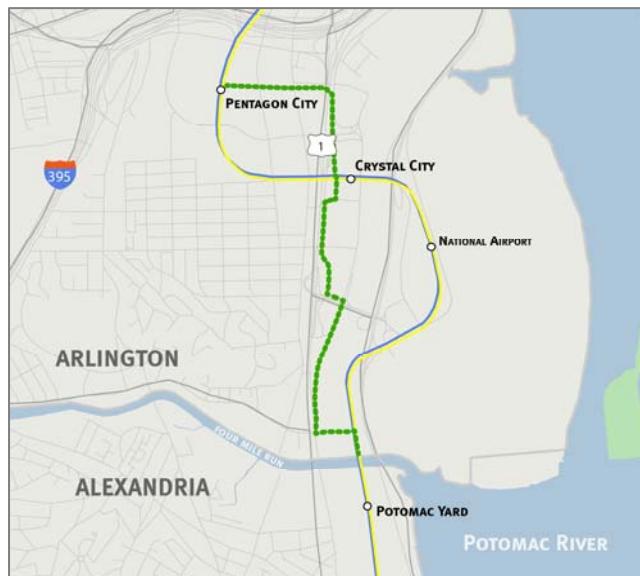

See the project description in Attachment A for more information.

VIRGINIA

2. Crystal City – Potomac Yard Streetcar in Arlington County

This project will construct and operate a streetcar system that runs parallel to US 1 (Jefferson Davis Highway) from the Pentagon City Metro station to Four Mile Run at the city limit of Alexandria. The CLRP currently includes an exclusive bus transitway project along most of the same route that is scheduled to open in 2013. The streetcar system will replace the bus service in 2018.

Complete: 2018
Length: 2.25 miles
Cost: \$160 million
Funding: Federal, state and local

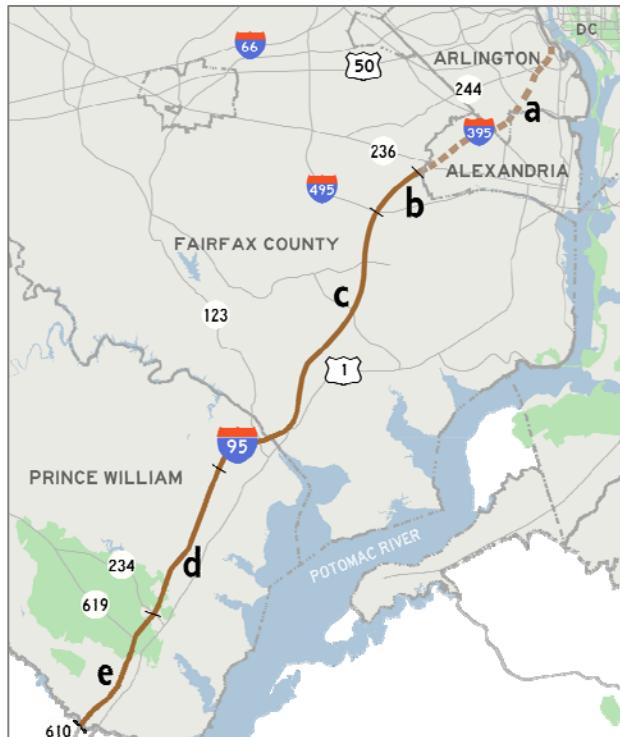

See the project description in Attachment A for more information.

The completion date of the Potomac Yard Metro Station is also being advanced from 2030 to 2017.

3. I-395/I-95 HOV and HOT Lanes from 2 miles north of I-495 to VA 610

This project is currently included in the CLRP as a system of High-Occupancy Toll, or HOT lanes between Eads Street in Arlington County and VA 610 (Garrisonville Road) in Stafford County. HOT lanes will be available to HOV-3, transit and emergency response vehicles free of charge. Other vehicles may use the facility by paying an electronic toll. Tolls will vary based on time of day, day of week, and level of congestion in order to maintain free-flow conditions. VDOT is proposing to reconfigure the project, including the elimination of the implementation of HOT lanes on I-395 inside the Capital Beltway. The changes are summarized in the table below:

Map Index	Current CLRP Project Includes	VDOT Proposed Change to Current CLRP Project	Description of Proposed Configuration
a	3 HOT Lanes	2 HOV Lanes	Eliminate the implementation of HOT lanes on I-395 inside the Capital Beltway
b	3 HOT Lanes	3 HOT Lanes (no change)	Widen the existing HOV facility from 2 to 3 lanes on I-395 from I-495 (Capital Beltway) to approximately 2 miles north, in the vicinity of Turkeycock Run and convert to HOT lanes
c	3 HOT Lanes	3 HOT Lanes	Widen the existing HOV facility from 2 to 3 lanes on I-95 from I-495 to VA 3000, Prince William Parkway and convert to HOT lanes
d	3 HOT Lanes	2 HOT Lanes	Convert the existing 2-lane HOV facility from VA 3000, Prince William Parkway to VA 234 (Dumfries Road) into HOT lanes
e	2 HOT Lanes	2 HOT Lanes (no change)	Construct 2 new HOT lanes from VA 234 (Dumfries Rd.) to VA 610 (Garrisonville Rd.)
f	2 HOT Lanes	2 HOT Lanes (no change)	Two HOT lanes will continue 10 miles south to the VA 17/US 1 Massaponax exit in Spotsylvania County. This portion of the project is outside the TPB's planning area and will be coordinated with the Fredericksburg area MPO (FAMPO).

I-395/I-95 HOV and HOT Lanes (continued)

Transit Service Plan

At this time, VDOT is also proposing to remove the elements of the transit service plan that had previously been included in the CLRP as a part of the I-95/I-395 HOV/Bus/HOT Lanes project. VDOT is working with local jurisdictions and transit agencies to develop a revised set of transit and transportation demand management (TDM) improvements for the corridor. These transit and TDM measures will be proposed as a separate project for inclusion in the CLRP at a later date. Please see the table that follows the CLRP project description form in Attachment A for a full listing of the elements from transit service plan being removed.

Complete: 2015

Length: 27 miles (not including southern portion from VA 610 to VA17/US 1)

Cost: \$1.01 billion

Funding: Federal, state, local and private

See the project description in Attachment A for more information.

Note: This project was included as an amendment to the CLRP on July 18, 2011.

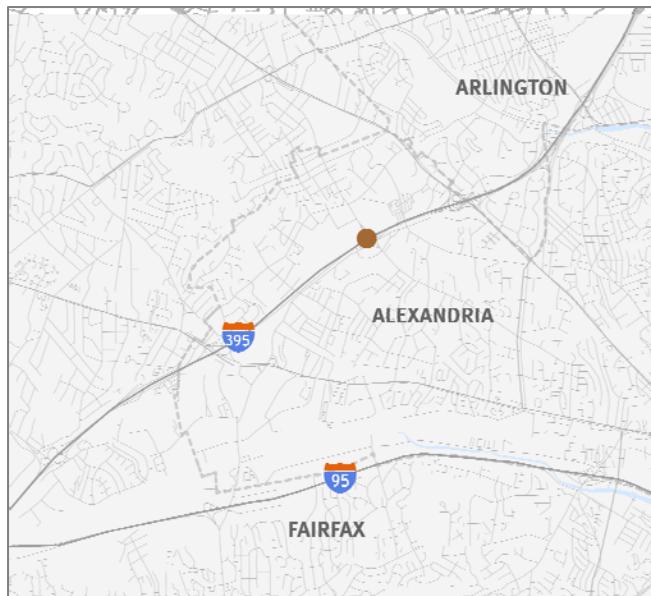

4. I-395 HOV Lanes Reversible Ramp from/to Seminary Road

VDOT is proposing to construct a new reversible on/off ramp that connects Seminary Road and the I-395 HOV lanes to and from the south. This project adds HOV and transit access to accommodate the expected increase in travel generated by Department of Defense employees at the nearby Mark Center.

Complete: 2015

Cost: \$80 million

Funding: Federal and state

See the project description in Attachment A for more information.

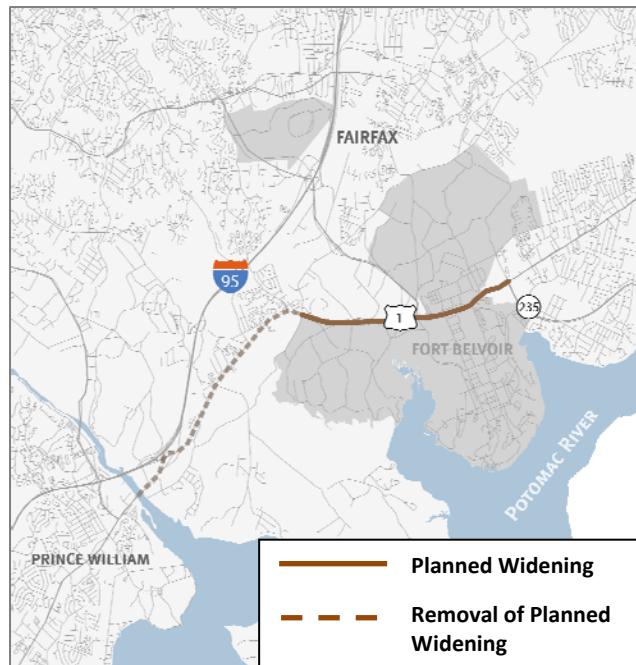

Note: This project was included as an amendment to the CLRP on July 18, 2011.

5. Widening of US 1 – Project Limit Change from VA 235 South to VA 611

This project is currently included in the CLRP as a widening of US 1 (Richmond Highway) from 4 to 6 lanes from VA 235 South (Mt. Vernon Memorial Highway) to the Occoquan River/Prince William County Line. VDOT is proposing to remove approximately 4 miles of widening from the southern end of the project and change the southern limit to VA 611 (Telegraph Road).

Complete: 2020
Length: 3.5 miles
Funding: Federal and state

See the project description in Attachment A for more information.

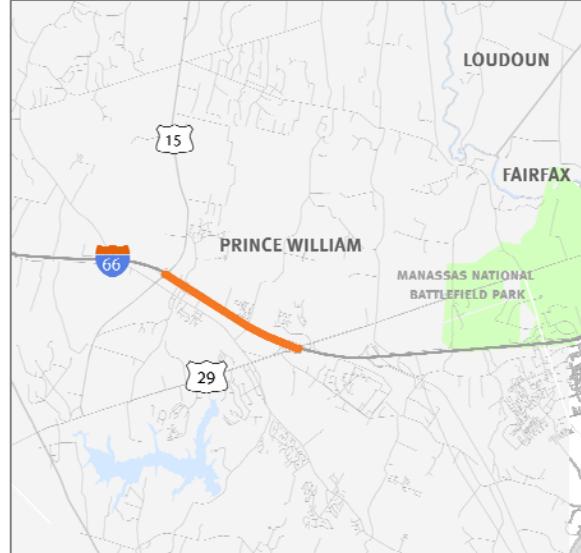

6. Widen I-66 General Purpose and HOV Lanes from US 15 to US 29 (near Gainesville)

This project is currently included in the CLRP as a widening to construct HOV Lanes on I-66 between US 15 (James Madison Highway) and US 29 (Lee Highway) in Gainesville. VDOT is proposing to also add an additional general purpose lane in each direction to I-66 within the same limits. The completion date of the project is advancing from 2020 to 2018.

Length: 2.5 miles
Complete: 2018
Cost: \$131.9 million
Funding: Federal

See the project description in Attachment A for more information.

Note: This project was included as an amendment to the CLRP on July 18, 2011.

October 6, 2011

MEMORANDUM**TO:** TPB Technical Committee**FROM:** Jane A. Posey
Transportation Engineer**SUBJECT:** Defining Regional Significance for Conformity

Transportation projects that are defined as “regionally significant” must be included in an air quality conformity analysis before they may be included in the Constrained Long Range Plan (CLRP) or Transportation Improvement Program (TIP). Currently, any project that changes a link in the regional highway or transit network is considered “regionally significant”. With the recent development of a finer-grain zone system, including a more detailed street base and splitting of links to add new connectors to zone centroids, it is necessary to redefine “regionally significant” in order to maintain the same threshold for “regionally significant” as in the past conformity procedures. The conformity regulations define regional significance as follows:

Regionally significant project means a transportation project (other than an exempt project) that is on a facility which serves regional transportation needs (such as access to and from the area outside of the region, major activity centers in the region, major planned developments such as new retail malls, sports complexes, etc., or transportation terminals as well as most terminals themselves) and would normally be included in the modeling of a metropolitan area's transportation network, including at a minimum all principal arterial highways and all fixed-guideway transit facilities that offer an alternative to regional highway travel.

The following proposed new definition of a “regionally significant” project has been developed to meet the requirements of the conformity regulations while maintaining the same threshold for “regional significance” as in past conformity procedures:

- 1) Any project on a facility that is included in the coded regional network that adds or removes at least one continuous vehicular lane from one major road to the next, or adds a new access/egress location or capacity; or
- 2) Any transit project that adds or modifies fixed-guideway transit facilities (heavy rail, light rail, streetcar, bus rapid transit)

The new definition will be used for all future air quality conformity analysis, starting with the conformity analysis of the 2011 CLRP.

DEFINITIONS: Project Numbers implemented fully prior to 2000 were removed from the TERM Tracking Sheet

CREDIT TAKEN (X means emissions reduction credits taken):

TIP - Emissions credits are taken for projects being implemented, according to the progress reporting schedules provided by the implementing agencies (contained in Appendix J of Conformity Document). No credit has been taken for projects in which only some components of the measure have been implemented.

CLRP - Credit is taken for each of these elements of the CLRP according to the schedule provided by the implementing agency.

IMPLEMENTATION STATUS:

FULL = project is completed as planned at the time of analysis.

SCALED BACK = project is completed, but at a different level than assumed at the time of analysis (i.e., purchased 50 buses instead of 100)

UNDERWAY = project is not complete, but is close enough that credit may be taken (i.e., under construction, NOT just out for bid)

REMOVED = project no longer expected to be implemented or constructed

COMPLETION DATE:

PROJECTED = project completion date originally expected (i.e., at time of emissions analysis)

ACTUAL = actual year project was open for use, or expected to be open for use if under construction

REMOVED

projects Emissions credits are not counted in total available emissions credits

¹ Line items 218, 216, 179, 92 are all credited as part of M-92 Regional Telecommute Support TERM, line item # 75

² Line item 108 & 219 credits are taken only for year 2010

DEFINITIONS: Project Numbers implemented fully prior to 2000 were removed from the TERM Tracking Sheet

CREDIT TAKEN (X means emissions reduction credits taken):

TIP - Emissions credits are taken for projects being implemented, according to the progress reporting schedules provided by the implementing agencies (contained in Appendix J of Conformity Document). No credit has been taken for projects in which only some components of the measure have been implemented.

CLRP - Credit is taken for each of these elements of the CLRP according to the schedule provided by the implementing agency.

IMPLEMENTATION STATUS:

FULL = project is completed as planned at the time of analysis.

SCALED BACK = project is completed, but at a different level than assumed at the time of analysis (i.e., purchased 50 buses instead of 100)

UNDERWAY = project is not complete, but is close enough that credit may be taken (i.e., under construction, NOT just out for bid)

REMOVED = project no longer expected to be implemented or constructed

COMPLETION DATE:

PROJECTED = project completion date originally expected (i.e., at time of emissions analysis)

ACTUAL = actual year project was open for use, or expected to be open for use if under construction

REMOVED

projects Emissions credits are not counted in total available emissions credits

1 Line items 218, 216, 179, 92 are all credited as part of M-92 Regional Telecommute Support TERM, line item # 75

2 Line item 108 & 219 credits are taken only for year 2010
