

Regional Transportation Safety Planning Activities

1. Proposed Regional Data Mining and Visualization Tool
2. Safety Element of the CLRP
3. Regional Traffic Safety Data
4. Street Smart Pedestrian & Bicycle Safety Campaign

Briefing to the Bicycle & Pedestrian Subcommittee

Tuesday, November 17, 2009

Item #5

Transportation Safety Subcommittee

- Includes representatives of State DOT's, WMATA, law enforcement, other agencies interested in transportation safety
- Oversees the Safety Element of the Constrained Long-Range Plan, other regional transportation safety projects
- Meets as needed, typically three times per year

Proposed Regional Data Mining & Visualization Tool

- Presented & Demonstrated to Transportation Safety Subcommittee October 30, 2009
 - Developed by University of Maryland CATT Lab www.cattlab.umd.edu.
 - Maryland version cost \$170,000, nearly complete
 - Tool allows data in police crash reports to be queried through an intuitive, web-based interface
 - Allows complex queries, yet easy to use
 - No SQL queries required
 - Menus and Checkboxes
 - Geolocated crash data
 - Intersection, Corridor, and Area queries
 - Useful for state safety analysts, regional planners, and local traffic engineers
- DDOT representatives expressed strong interest
- VDOT representatives expressed guarded interest
 - Cited budget difficulties, possible duplication of current efforts

Next Steps

- **Two Alternatives:**
 - A single regional tool
 - Disadvantage: Would require reconciling differences in State Safety Data
 - Advantage: Would readily allow region-level queries
 - A separate but similar tool for each State
- **Scoping Study**
 - Comparison analysis of Virginia, Maryland, and District of Columbia Police Crash Databases
 - Options and budgets for single regional or separate tools
 - Funding source needs to be identified

Safety Element of the Long-Range Transportation Plan

- A Federal requirement
- Common goals of the State Strategic Highway Safety Plans (SHSP)s of DC, Maryland, & Virginia goals are incorporated into the CLRP Safety Element
- A regional look at Transportation Safety
 - Transportation Planning Board Members
 - Includes all of Charles County
- A short, web-based document
 - Update by March 1st, 2010

Emphasis Areas in Common from the SHSP's

1. Pedestrians
2. Impaired Driving
3. Speeding & Aggressive Driving
4. Occupant Protection (seatbelts)
5. Driver Competence and Licensing
6. Young and Older Drivers
7. Motorcycles
8. Large Trucks
9. Run off the Road
10. Intersections
11. Work Zone
12. Information and Decision Support Systems (Traffic Records)

Traffic Fatalities

*Source: NHTSA 2008 State Traffic Safety Information.

**A Fatality Can Be in More Than One Category. Therefore Sum of the Individual Cells Will Not Equal the Total Due to Double Counting

Conclusions from NHTSA Fatality Data

- Traffic Deaths are declining in the Washington Region, as they are nationally
- Run off the road, Speeding, Seatbelts, Alcohol Impaired Driving, and Intersection collisions are implicated in the most deaths
- Pedestrian, Motorcycle, and Bicycle Deaths are not declining
- Heavy Truck Deaths are declining
- Fatality Data for young/old drivers and work zones not available at local level from NHTSA

Injury Trends: 1999-2007

Total	2552	2717	2940	2639	2810	2832	2953	2949	2615	25007	2779

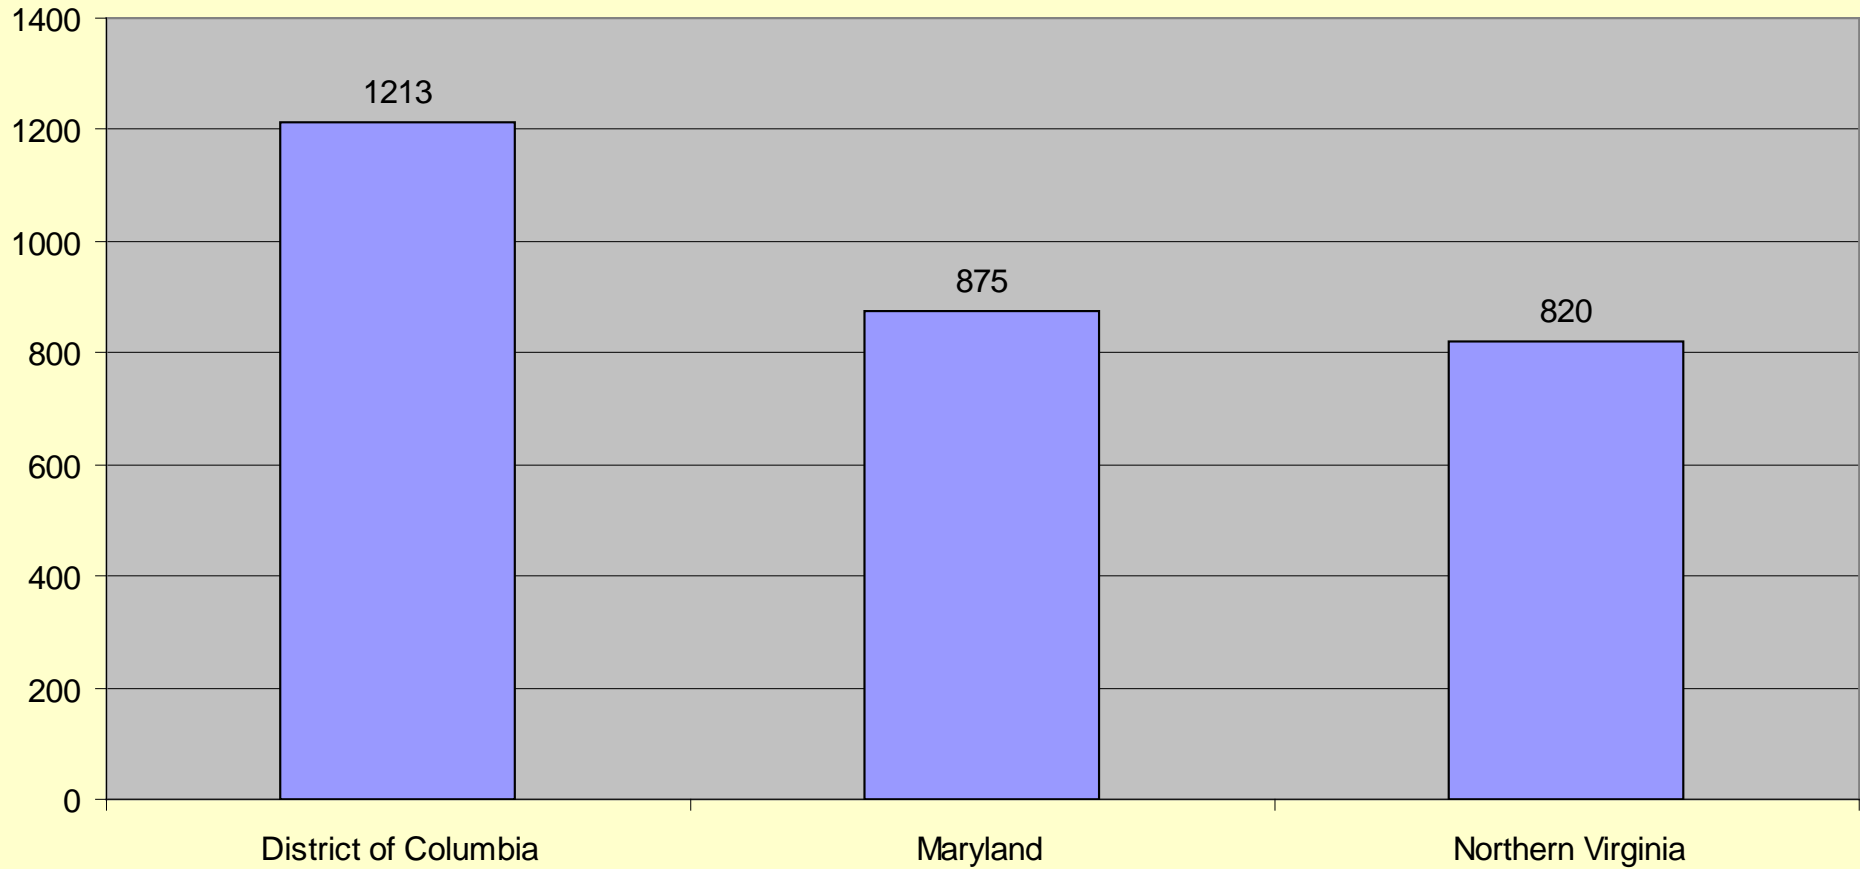

Traffic Injuries per 100,000 Population in the Washington Region, 2003-2007

Average Annual Traffic Deaths Per 100,000 Population,
2005-2007

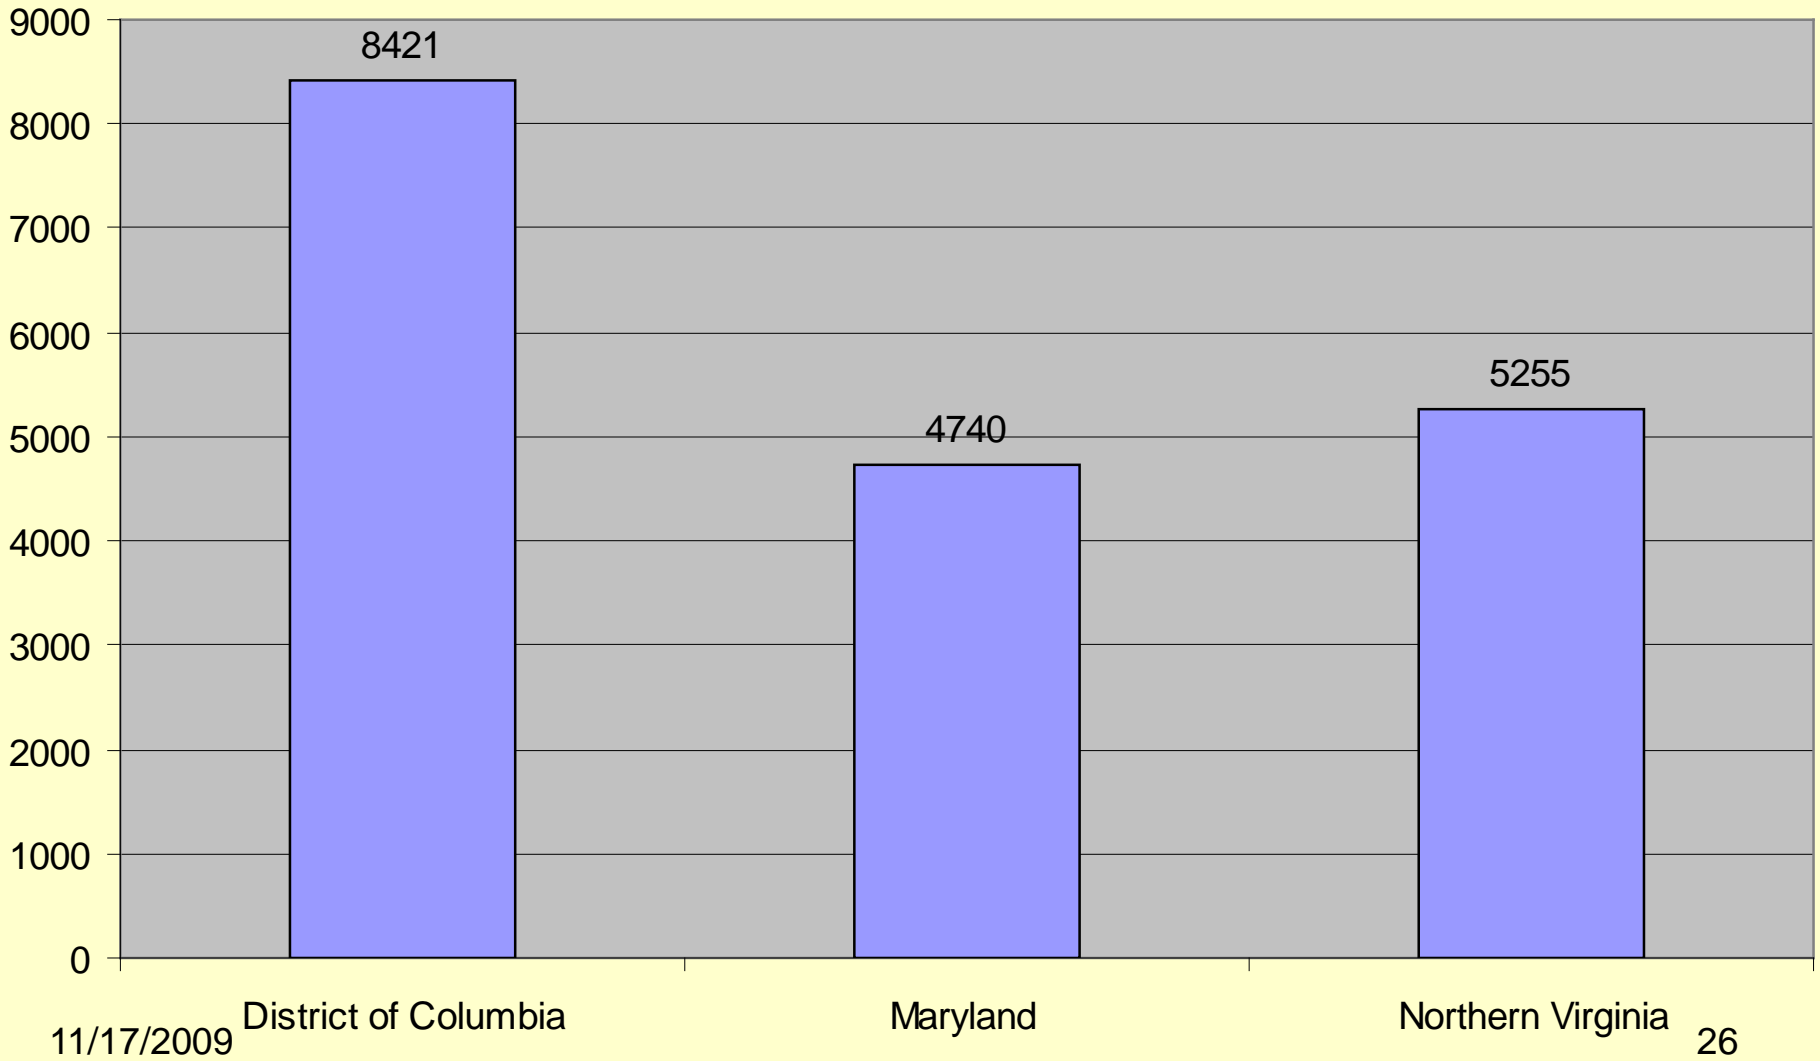

Average Annual Traffic Injuries per 100,000 Population,
2005-2007

Crashes per 100,000 Population in the Washington Region 2003-2007

Average Annual Crashes per 100,000 Population 2003-2007

2007 Crash Types in the Washington Region (Total Crashes = 82,054)

2007 Crash Types as a Percent of Total Crashes in the Washington Region (Total = 82,024)

Conclusions

- Regional Fatalities/100,000 are declining
- Injuries/100,000 are declining a little faster
- Significant differences in Fatality, Injury & Crash rates between the States
 - Maryland has the highest death rate
 - DC has the highest injury rate

Crashes vs. Fatalities

- By crashes
 - young drivers and signalized intersections stand out as traffic safety issues
 - Pedestrian (2.5%) and Motorcycle Crashes (1.6%) not significant
- By fatalities
 - Pedestrians - 21% of fatalities
 - Motorcyclists - 12% of fatalities

Sources

- DDOT – Traffic Safety Report Statistics (2006-2008), SHSP
- MHSO – County Spreadsheets, Issue Area Spreadsheets
- VDOT – Access database of Statewide crashes
- NHTSA – Traffic Fatalities

Caveat Emptor

- Missing data, discrepancies
 - NHTSA and DDOT fatality numbers conflict
 - DDOT numbers were higher, so I used them
- VDOT Access Database
 - Good: Custom Queries
 - Bad: Unfamiliar database, software = opportunities for error

Next Steps

- **Fill in 2008 Injury and Crash Data as it becomes available**
 - Fatalities, Injuries & Crashes can each tell a different story
 - Calculate rates/population
- **White Paper on Regional Traffic Safety**
 - What do you want to know?
- **Safety Element of the CLRP**
 - Short, web-based, consistent with rest of CLRP
 - January 30, 2010

FY 2010 Activities & Funding

- Fall Wave - November 2009
 - Media, Enforcement, Public Relations
 - Uses same materials as Spring 2009
 - Fall budget is about ½ the Spring budget
 - Press Event October 29th
 - Halloween Theme
 - Georgetown
- Spring Wave
 - March-April 2010
 - New Materials to be developed
 - Advisory Meetings 1 p.m December 2nd, 10 a.m. January 15th
- Budget will be about \$650,000
 - Local funding support decreased, Federal/State funds increased
 - Funding commitments sufficient for Fall & Spring campaign waves
