Docket ID No. EPA-HQ-OAR-2005-0172

Dear Administrator Jackson:

On behalf of the Metropolitan Washington Air Quality Committee (MWAQC), I am writing to comment on the proposed revisions to the National Ambient Air Quality Standards (NAAQS) for ozone. MWAQC was designated in 1992 under Section 174 of the Clean Air Act (CAA), to develop regional air quality plans for attaining Federal air quality standards in the Washington region. We have done so successfully over the past eighteen years. This assignment is carried out through a partnership among the States of Maryland and Virginia and the District of Columbia, and the region's local governments in the non-attainment area.

MWAQC supports the range of the reconsidered ozone standard, 60-70 parts per billion (ppb) as being more protective of human health and the environment. We are pleased that EPA's recommended standard is consistent with the Clean Air Scientific Advisory Committee's (CASAC) recommendations made in 2007.

The new standard will be extremely difficult to meet in the metropolitan Washington region. On the worst days of summer, transported pollution concentrations can exceed the levels proposed for the standard. MWAQC has and will continue to adopt all feasible control programs at the local level, however, it is imperative that EPA help the states and local governments meet the new standards by providing assistance and adopting national rules as part of a national strategy to address pollution – particularly as it relates to pollution that does not originate in our region.

We look forward to further information about the reconsidered standard later this year. Thank you for taking our concerns into consideration as EPA finalizes its guidance in the coming months.

Sincerely,

Leta Mach, Chair
Metropolitan Washington Air Quality Committee
