## . INTRODUCTION

The Transportation Improvement Program (TIP) is prepared each year by the National Capital Region Transportation Planning Board (TPB), which is the designated metropolitan planning organization for the Washington region. The fifth TIP prepared under the Transportation Equity Act for the 21<sup>st</sup> Century (TEA-21) which became law in June 1998, it was developed according to the final metropolitan planning regulations issued by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) on October 28, 1993. As a product of the urban transportation planning process, it outlines the staged development of the area's financially-constrained Long-Range Transportation Plan (CLRP), with priority projects selected for programming by the TPB, the states and the transit agencies presented in the first year of the six-year program. State, regional and local transportation agencies update the program each year.

The first CLRP was adopted by the TPB on September 21, 1994 to comply with the final metropolitan planning regulations. On July 15, 1998 the TPB approved the document: *1997 Update to the Financially Constrained Long-Range Transportation Plan for the National Capital Region*, which summarizes the three-year update to the 1994 plan. On October 18, 2000 the TPB adopted the third three-year update: the 2000 Financially Constrained Long-Range Transportation Plan for the National Capital Region.

It is anticipated that in October, 2003, the TPB will adopt the fourth three-year update: the 2003 Financially Constrained Long-Range Transportation Plan for the National Capital Region. In updating the plan, the TPB and the transportation implementing agencies made use of a set of formal goals and objectives known as the Policy Element, which considers the seven planning areas identified in TEA-21 and reflects the policy goals and action agenda in the Vision Statement that the TPB adopted in October 1998. This CLRP contains numerous highway and high occupancy vehicle (HOV) facilities, public transit and bicycle improvements, major studies, and transportation strategies proposed through the year 2030.

The TIP serves several purposes. It is an expression of intent to implement specific facilities and projects in the CLRP through the selection of priority projects during the initial six-year period of the plan. It provides a medium for local elected officials, agency staffs, and interested members of the public to review and comment on the priorities assigned to the selected projects. It also satisfies one of the requirements of FHWA and FTA for the continuing transportation planning process of this region. These requirements form the basis for certification of the process which is essential to insure continued federal financial assistance for Washington area transportation improvements. Finally, the TIP establishes eligibility for federal funding for those projects selected for implementation during the first program year, known as the **Annual Element** of the program.

## **II. FEATURES OF THE TRANSPORTATION IMPROVEMENT PROGRAM**

This TIP is a multi-modal listing of the public transit, highway and HOV, bicycle and pedestrian improvements as well as ridesharing programs and transportation emission reduction measures for which the obligation of funds has been programmed. It documents the cost, implementation phasing, sources and types of funds, and describes each project included in the program.

This TIP covers the six-year period FY 2004 to 2009. It identifies a priority list of projects and project segments to be carried out with federal funding under TEA-21. It is normally updated every year by the TPB.

The TIP includes a financial plan that shows the total dollars programmed by the District of Columbia, Maryland, Virginia, and WMATA for the TEA-21 funding categories for each year. The plan shows the funding programmed for the priority projects in the first year, which is consistent with the anticipated federal funding for FY 2004 that each state has authorized for the region. It also shows the funding programmed for the second through sixth years, which is also consistent with the anticipated federal dollars authorized by each state.

This TIP and the update of the CLRP were developed under procedures to involve citizens, affected public agencies, representatives of transportation agency employees, private providers of transportation, and other members of the public. Draft versions of the project submissions for the 2003 CLRP update and new TIP were made available to interested members of groups and the general public at the TPB Citizens Advisory Committee meeting on April 10, 2003 and at the TPB meeting on April 16, 2003. The implementing agencies prepared CLRP project description forms, which together with TIP project information provide a complete project description, including its purpose, contribution to regional goals, and estimated cost. Copies of the TIP and major project submissions were accessible on the COG web page and were available for no charge at the COG Information Center. The complete sets of description forms for the projects in the update of the plan and those included in this TIP are available in three volumes, which can be obtained or reviewed at the COG Information.

Citizens and other interested parties had several opportunities to comment on the proposed plan update, the draft TIP, and the air quality conformity analysis at the TPB meetings on May 21, June 18, July 16, September 17, and October 15, 2003. A summary of the public comments and responses is included in Chapter VI. The TPB is scheduled to adopt the 2003 CLRP and this TIP on October 15, 2003.

The TIP is not intended to be a capital improvement program (CIP). A CIP shows the

estimated expenditure on projects over the program period. The TIP, on the other hand, programs the advancement of projects through the obligation of federal funds. Once federal funds have been obligated for a project, it might not appear again in a subsequent TIP. A project would appear in a CIP, however, as long as funds are being expended on it. With regard to the TIP, a project would be programmed for several different years if it was contemplated that the obligation of federal funds would be sought for different implementation phases of the project during those years.

## **Project Selection**

Projects on the National Highway System (NHS) and projects funded under the Bridge and Interstate Maintenance programs of TEA-21 are selected by each state in cooperation with the TPB from the approved TIP. Projects funded under the Surface Transportation Program (STP), the Congestion Mitigation and Air Quality (CMAQ), and the Transit Program (Title III) of TEA-21 are selected by the TPB in consultation with each state from the approved TIP and in accordance with the priorities in the TIP.

## Priority Listing of Projects in the Annual Element

The first year of the program contains a priority listing of those projects selected for funding. These are shown in the "Annual Element FY 2004" column in the tables. Each transportation improvement project must be included in the Annual Element at key stages in its implementation (preliminary engineering, right-of-way acquisition, and construction) as a basis and condition for all federal funding assistance. This includes all TEA-21 funding under Title I (Surface Transportation) and Title III (Transit) to state, local, and regional implementing agencies for highway, transit, bicycle and pedestrian capital improvements and transit operating assistance. For this reason, the Annual Element is the most important part of the TIP.

The program tables emphasize the Annual Element, the projects scheduled for implementation in FY 2004. Projects are grouped according to the agency or jurisdiction responsible for implementation.

A series of codes and notes has been used for the Annual Element to indicate the funding sources and which phases of the projects are planned for implementation. Identification of the funding source is for programming purposes only, and does not necessarily represent approval from the appropriate federal agency. Highway projects may appear in programs as many as three times: when applications for federal funds are made for preliminary engineering, right-of-way acquisition, and/or construction. Codes and symbols for these phases and for funding sources appear under **KEY TO CODES** at the end of the improvement

tables section.

All projects in the Annual Element come from the CLRP. In addition, a number of projects appear in the TIP which are minor in nature, but are shown in order to establish eligibility for federal funding assistance. Also, some non-federally funded projects are shown, which are either recommended in the Plan, or are considered regionally significant and important to identify for air quality analysis and information purposes.

## **Grouping of Projects**

Some projects in the program are considered to be inappropriate in scale for individual identification in the Annual Element. These include signalization, traffic engineering, safety, noise abatement, modernization projects that do not change the use or scale of existing facilities, and certain small-scale highway and transit projects. These types of projects are grouped together under type of project, funding source, and programming agency. In February 1994, the TPB approved a set of criteria for grouping projects based upon those project types that are exempt in the EPA air quality conformity regulations.

## Amendments

The Annual Element of the TIP represents a best estimate of the projects that are planned for advancement during the first program year. However, there must be some flexibility to change the Annual Element during the one-year interval between the publication of successive TIP's. Conditions will change, such as changes in priorities and funding availability, which will dictate modifications such as adding a new project, expanding the scope and/or funding level, changing the source of federal funding, or changing the phasing of a project. Accordingly, action may be taken to amend the Annual Element.

Proposed amendments are submitted to the TPB staff. Staff presents them to the TPB Program Committee for review and placement on the next TPB meeting agenda for informational purposes and public comment, with subsequent action at the following TPB meeting.

## **Status of Environmental Review**

The TIP tables include a column with information on the status of environmental review as required for projects pursuant to the National Environmental Policy Act (NEPA). For example, a project undergoing environmental review as a study to prepare a draft environmental impact statement, is designated "DEIS (2)". Identification of the type of environmental work is for programming purposes only, and does not necessarily represent approval from the

appropriate federal agency. Projects cannot be constructed until the appropriate review has been approved. The abbreviations used in this column are as follows:

- CE Categorical Exclusion
- EA Environmental Assessment
- FONSI Finding of No Significant Impact
- DEIS Draft Environmental Impact Statement
- FEIS Final Environmental Impact Statement
- 4F Determination of Environmental Impact on Parkland.

Subscripts are also used to indicate the status of environmental work:

- 1) Proposed for Preparation
- 2) Under Preparation
- 3) Prepared for Review
- 4) Approved

## III. PROGRAM ANALYSIS

The TIP integrates projects proposed by state and local transportation agencies into a program consistent with the current regional transportation plan and policies. In the development of this program, individual agency inputs are evaluated for consistency with the plan and policies. The TIP includes projects within the boundary of the Washington Metropolitan Area.

## Relationship to the Long Range Transportation Plan

The financially constrained Long-Range Transportation Plan (CLRP), which was updated in 2003 to comply with the metropolitan planning regulations, is known as a constrained plan because its scope is limited by the financial resources expected to be available. In updating the CLRP, the TPB and the transportation implementing agencies made use of a set of formal goals and objectives known as the Policy Element, which include the TPB Transportation Vision adopted in October 1998 and the seven "planning areas" that were established by TEA-21 in June 1998.

The CLRP contains specific highway and high occupancy vehicle (HOV) facilities, public transit and bicycle improvements, and multi-modal studies proposed to be completed by 2030. In addition, the plan contains a set of transportation emission reduction measures (TERMs), including expansion of ridesharing incentive programs, telecommuting support, and construction of bicycle and pedestrian facilities, which are needed to reduce future emissions and help ensure that the plan meets the requirements of the Clean Air Act Amendments of 1990 (CAAA). The plan also incorporates a congestion management system (CMS), which will assess congestion and provide information for updating future plans. Through the planning process, specific projects and strategies are refined and selected from the plan, consistent with the Policy Element, the financial resources, and the air quality requirements, and scheduled for implementation in the TIP.

## Air Quality Conformity of the Long Range Transportation Plan and the TIP

The CAAA specify dates by which clean air standards must be attained and requires preparation of a plan identifying the measures to be employed and an implementation schedule for attainment. The act also specifies that revised conformity procedures be used. The U.S. Environmental Protection Agency (EPA) and the U.S. Department of Transportation jointly issued final regulations originally on November 24, 1993, with amendments on August 7 and November 14, 1995 and August 15, 1997, and additional guidance published by EPA on May 14 and by the FHWA and FTA on June 14, 1999 regarding the criteria and procedures to be followed by metropolitan planning organizations in making conformity

## determinations.

Based upon these regulations, COG/TPB staff conducted the analyses needed to provide the basis for a finding of conformity of the 2003 CLRP and FY 2004-2009 TIP with the requirements of the CAAA. The results of these analyses are included in a report entitled: *Air Quality Conformity Determination of the 2003 Constrained Long-Range Plan and the FY 2004-2009 Transportation Improvement Program for the Washington Metropolitan Region*, DATE.

## Compliance With Regulations On Providing Transit Services to Persons With Disabilities

In July 1990, the Americans with Disabilities Act (ADA) became law, providing persons with disabilities full access to transportation, housing and employment as a basic civil right. The ADA affects not only the Washington Metropolitan Area Transit Authority (WMATA), which operates federally assisted transit services in the region, but all of the bus, paratransit, and commuter rail services in the region. On September 6, 1991, the U.S. Department of Transportation issued final rules, which called for significant changes to the existing regulations on providing transit services to disabled persons. Under these rules, all purchased buses must be accessible, and all lifts and securement devices must accommodate all types of commonly used wheelchairs. In addition, complementary paratransit service has to be comparable to the fixed route services in terms of fares, response time, hours of operation, service area and other criteria.

To address the ADA paratransit regulations, WMATA and the local jurisdictions established the Regional Paratransit Coordinating Committee (RPCC) in January 1991 to provide a forum for an exchange of information, ideas and strategies. WMATA contracted with a consultant to assist it and the RPCC in preparing a regional plan for submission to FTA by July 26, 1992. This plan defines how WMATA will arrange for new paratransit services and how the existing paratransit services funded by each jurisdiction will be changed, improved, or coordinated with the other services in the region in order to meet the requirements of the new legislation. Frederick County and the City of Frederick also prepared an ADA paratransit plan to complement their fixed-route bus services. On July 15, 1992, the Transportation Planning Board certified that both plans are in conformance with the Long Range Plan for the region.

By January 1997, both WMATA and Frederick County ADA Paratransit services were operating as planned in conformance with the regulations. Thus, according to 1997 FTA rules, the Transportation Planning Board is no longer required to annually certify that these plans are in conformance with the Long Range Plan for the region.

Other programs in the Washington region also contain special efforts to serve elderly persons and persons with disabilities. The Annual Element identifies the projects using FTA Section 5310 funding.

### Compliance with Requirements of Urban Mass Transportation Financial Capacity Policy

## FTA Regulations

On March 30, 1987, the Urban Mass Transportation Administration, now called the Federal Transit Administration (FTA), issued Circular 7008.1 clarifying how FTA, when making grants, will assess the financial capacity of applicants. The circular identifies two aspects of financial capacity:

The general <u>financial condition</u> of the public transportation operating enterprise and its non-federal funding entities, and the <u>financial capability</u> of the agency and its funding entities which includes the sufficiency of their funding sources to meet future operating deficits and capital costs.

The circular describes how financial capacity reviews will be conducted as follows:

A determination of financial capacity is required at the stage where commitments to finance projects are made by the grantee and FTA. For Section 3 grants, FTA will assess financial capacity both at the stage when TIPs are approved and when selecting projects for Section 3 funds. For Section 9 grants, FTA will assess financial capacity at the TIP approval stage and grantees will be required to make their own self-certifications at the grant application stage.

The following guidance is provided with regard to the preparation of TIPs:

In preparing TIPs, local officials are encouraged to scrutinize proposed programs of projects for sufficiency of funds to cover total capital, operating and maintenance costs over the life of the projects. FTA will review TIPs along these lines.

Financial Capability to Meet Future Requirements of the Region

From an historical standpoint, the ridership growth and general financial condition of the

region's extensive public transit systems are good. Ridership on both Metrorail and Metrobus services shows dramatic growth over the past decade. Ridership has increased on the local bus services operated by Alexandria, the City of Fairfax, Fairfax, Loudoun, and Prince William counties in Northern Virginia; and by Montgomery, Frederick, and Prince George's counties in Maryland. Over the past decade, the local jurisdictions and the state and District governments have addressed the challenges of providing the necessary funding for expanding Metrorail, implementing regional ADA paratransit services, maintaining Metrobus services, and operating local bus systems.

In the near future, as required by the metropolitan planning regulations, the TIP is financially realistic by year from FY 2004 through FY 2009. WMATA, the District of Columbia DOT, the Maryland DOT, the Virginia Department of Rail and Public Transportation, the Northern Virginia Transportation Commission, the Potomac and Rappahannock Transportation Commission, and the cities and counties within the region have identified existing revenue sources for the numerous bus, paratransit, commuter rail, and rail transit projects programmed in the TIP. The identified revenues are expected to cover the costs associated with these projects.

During 2003, Cambridge Systematics, Inc. prepared a financial plan for the update of the CLRP which estimated the financial resources for transportation through 2030. The projected revenues, maintenance/operating costs, and capital costs for the highway and transit systems in the District of Columbia, Suburban Maryland, and Northern Virginia in this plan were used by the implementing agencies to assist in the development of financially realistic inputs for this FY 2004-2009 TIP.

Under the financial analysis for the 2003 CLRP update, the funding identified by the implementing agencies for system preservation and for accommodating ridership growth on the WMATA rail system was less than requested by WMATA. Concerns also were expressed regarding the adequacy of funding identified for preservation of the highway system.

During the past year, WMATA and the state and local governments have acted to fund the ongoing repair and rehabilitation of the transit system and address the financial capability to meet the transit needs of the region. Facing significant fiscal pressures, the state and local governments continue to commit general or dedicated funds for transit.

With funding for completing the 103-mile Metrorail system identified, the region is addressing the funding needs to rehabilitate, preserve and operate the Metrorail, Metrobus and local bus systems. The TPB, WMATA, and the state and local governments have acknowledged the fiscal challenges facing the regional transit system and have taken steps to identify new funding for rehabilitation and ridership growth. Considering both financial condition and capability, the region has the financial capacity to operate and maintain an expanded public

transportation system.

## Transit Private Provider Participation

## **FTA Regulations**

Sections 5309(e), 5303(o), and 5307(f) of the Federal Transit Act, as amended, require the involvement of private transit operators in the planning, programming and provision of public transit services to the maximum extent feasible.

Section 5303(o) states: "Private Enterprise.- The plans and programs required by this section shall encourage to the maximum extent feasible the participation of private enterprise. Where facilities and equipment are to be acquired which are already being used in service in the urban areas, the program must provide that they shall be so improved (through modernization, extension, addition, or otherwise) that they will better serve the transportation needs of the area."

On April 26, 1994, the Federal Transit Administration (FTA) published in the Federal Register (59 FR 21890) a "Notice of Recision of Private Enterprise Participation Guidance," which rescinded the FTA 1984 Private Sector Policy and the FTA 1986 Circular 7005.1 on the required documentation of private enterprise participation. The notice emphasized that FTA continues to support the participation of private enterprise, and indicates that two requirements in the Federal Transit Act, as amended, represent a comprehensive and thorough approach to the consideration of private enterprise at the local level.

The two requirements include:

- the Section 5307(f) process which mandates a public participation process for local transit systems (recipients of FTA funding) in the development of the Section 5307 program of projects; and
- the new Section 5303 metropolitan planning regulations issued in October 1993 which have extensive requirements regarding public participation in the development of transportation plans and programs by metropolitan planning organizations (MPOs).

The notice further states: "FTA's findings will be based on such criteria as the efforts a grantee or MPO has made to notify and consult with the private sector in its Section 5303 or section 5307(f) planning process; the effect of public mass transit service proposals on existing private mass transit operation; and any other steps or processes the grantee or MPO has taken to encourage private sector involvement. FTA believes that such factors will allow

it to determine whether the program developed under Section 5303 involves the private sector "to the maximum extent feasible," given particular local circumstances, both is connection with grant making Sections 5309, 5307 and 5311."

On September 21, 1994, the Transportation Planning Board (TPB) adopted its "Public Involvement Process" to fulfill the requirements and criteria in the Section 5303 metropolitan planning regulations issued October 1993 for access to information and involvement in the programming and planning process. This policy describes in detail the TPB's proactive process for involving "... citizens, affected public agencies, representatives of transportation agency employees, private providers of transportation, other interested parties..." in the development of TPB plans and transportation improvement programs (TIPs).

### **Bus Transit Providers in the Region**

WMATA, which is the principal public transportation provider in the region, is a recipient of FTA funding. The local governments who are co-signatories of the WMATA compact oversee WMATA's plans, policies and operations for rail and bus services. These local governments regularly review the costs, revenues and benefits of Metrobus routes in their jurisdictions.

Alexandria, Fairfax County, Fairfax City, and Montgomery and Prince George's Counties have introduced bus service which replaced or supplemented Metrobus service. Privately contracted operations are fully considered and employed when appropriate by each of these local governments. As part of their contracting process, the local governments solicit bids from qualified private providers. Currently, no federal funding is used in these services.

Prince William County, the City of Manassas, Stafford County, the City of Manassas Park, and the City of Fredericksburg are members of the Potomac and Rappahannock Transportation Commission (PRTC). Until 1998, PRTC had contracted with private firms for several years for express bus services to the Pentagon, Crystal City, the Vienna Metrorail station, and the District. After conducting a competitive procurement in 1998 PRTC selected WMATA for the management, maintenance and operation of over 75 vehicles. PRTC also provides "free" fare local bus service to the Virginia Railway Express stations. It operates an innovative route deviation service in eastern Prince William and Manassas, which involves USDOT Intelligent Transportation Systems funding to test high technology equipment for digital communications, automated routing and scheduling, and global positioning satellite tracking.

Loudoun County, which is not part of WMATA, contracts for express bus service to the Pentagon, Rosslyn and the District.

Background on the Development of TPB's Private Enterprise Participation Policy

On June 17, 1987, in response to Circular 7005.1, the TPB adopted its Private Enterprise Participation Policy. Until July 1995, COG/TPB staff implemented this policy, which included:

- Documenting public transit operator efforts to involve the private sector.
- Convening a Private Providers Task Force (PPTF) which meets regularly, identifies opportunities for greater private provider participation in mass transit in the region, and reviews documentation submitted to the TPB by transit operators describing how private enterprise procedures have been followed. The PPTF Chairman also serves on the TPB as a nonvoting member.

Establishing a complaint resolution process.

In December 1994, in response to a request from the PPTF, the TPB referred the task of reviewing the TPB Private Enterprise Participation Policy to the TPB Bylaws Task Force. This task force meet on January 25, April 5 and May 24, 1995 with the PPTF members, WMATA and local bus transit agency staff to review the TPB policy and the FTA April 1994 guidance, to discuss the issues raised, and to recommend revisions to the policy. The proposed revisions to the TPB policy were presented to the TPB in June, and the TPB approved a revised policy on July 19, 1995.

This revised policy simplifies the consultation process, ensures a channel of information between the transit agencies receiving FTA funding and the private providers, and removed the complaint resolution process. The policy includes:

- Conducting an annual forum where key public transit staff from state and local jurisdictions and meet with interested private providers to discuss their plans for new or restructured bus services.
- Supporting the Private Providers Task Force (PPTF) which meets regularly, identifies opportunities for greater private provider participation in mass transit in the region, and comments to the TPB on the Long Range Transportation Plan and on the transit element of the TIP. The PPTF Chairman also serves as a nonvoting member on both the TPB Technical Committee and the TPB.

Notifying the members of the PPTF when new or restructured public transit services are proposed by agencies or jurisdictions that are designated recipients of FTA funding.

• Documenting the activities and actions taken by transit operators receiving FTA funding to involve private transit operators.

## Activities During FY2003

During FY2003, WMATA and local government staffs have worked cooperatively with the PPTF and COG/TPB staff to accomplish the following:

## Consultation with Private Providers

To facilitate consultation, TPB conducted the thirteenth annual public transit forum on May 6, 2003 where key transit staff from the local jurisdictions and WMATA met with interested private providers to discuss in general terms their plans for major bus service and paratransit changes and expansions. Also at the forum, the PPTF discussed the financial analysis for the 2003 CLRP and a shared-ride taxi proposal.

## Notification of New or Restructured Transit Services

During FY2003, no information was provided by WMATA regarding new or significantly restructured bus services.

## Documentation

The annual narrative progress reports of activities and actions taken by transit operators receiving FTA funding to involve private transit operators will be submitted to FTA.

## **Conclusion**

This region, through local government initiatives, continues to contract with private firms for a considerable amount of bus services. During the past year, the local governments, working cooperatively with the PPTF and WMATA staff, have exercised their roles and responsibilities in the private enterprise participation process as described in the TPB's new Private Enterprise Participation Policy and Procedures as adopted July 19, 1995.

FY 2004 - 2009

#### DRAFT **FY 04** FY 05 **FY 06** FY 03 Carry FY 07 **FY 08 FY 09** Source Source Environ. Over Total Review 96 Facility: Economic Development Initiatives 155 a 1,808 c 1,808 c NHS 1,355 EA Satellite Government Centers Infrastructure 80 / 20 / To: Support STP 2.416 Jurisdiction: District of Columbia 80 / 20/ Total: \$3.771

Description: The purpose of this project is to provide transportation improvements to targeted areas as a means for stimulating private-sector activity and to improve the quality of life in District neighborhoods for its residents.

operational and safety improvements. New commercial development or revitalization projects may require improved access, channelization, turning lanes, traffic signals, new signage, lane markings, lighting and parking. Selected improvements that facilitate truck traffic and transit access help to serve and stimulate private-sector activity. Improved access and upgraded facilities can greatly enhance economic activity and revitalization. Efficient access from principal arterials, Interstate System and freeways allow trucks to deliver goods and services to economically disadvantaged areas as well as economic centers of the city. This project supports infrastructure revitalization by improving intermodal linkages between truck commerce, bus, rail, pedestrians and roadways.

New government centers will be constructed in selected neighborhoods throughout the city. The purpose of this initiative is to provide the necessary improvements to the transportation infrastructure to support the additional employment and customer traffic that will be attracted to these government centers. The proposed government centers include:

a. Petworth Metro Station area

b. Minnesota Avenue Metro Station area

c. Anacostia Business District (Martin Luther King Avenue and Good Hope Road, S.E.)

The scope of work includes sidewalks, curbs, gutters, streetlights, repairing tree boxes, replace litter boxes and other streetscape improvements at the three proposed government centers. Improved traffic channelization, signage, new traffic control signals and other traffic and streetscape improvements.

### DISTRICT OF COLUMBIA TRANSPORTATION IMPROVEMENT PROGRAM CAPITAL COSTS (in \$1,000)

#### DRAFT FY 05 **FY 03 FY 04** FY 06 FY 07 **FY 08 FY 09** Source Environ. Carrv Source Over Total Review 97 Facility: Economic Development Initiatives 1,000 a 2,000 a 500 a 500 a 500 a 500 a Local 26,600 N/A 5,500 c 6.300 c 2.000 c 4.300 c 4.500 c / 100 1 District of Columbia Total: \$26.600 The purpose of this project is to provide transportation improvements to targeted areas as a means for stimulating private-sector activity and to improve the quality of life in District neighborhoods for its residents This project will strategically target capital investments required to improve local and regional access to economic activity centers, foster downtown development and revitalization through a combination of operational and safety improvements. New commercial development or revitalization projects may require improved access, channelization, turning lanes, traffic signals, new signage, lane markings, lighting and parking. Selected improvements that facilitate truck traffic and transit access help to serve and stimulate private-sector activity. Improved access and upgraded facilities can greatly enhance economic activity and revitalization. Efficient access from principal arterials, Interstate System and freeways allow trucks to deliver goods and services to economically disadvantaged areas as well as economic centers of the city. This project supports infrastructure revitalization by improving intermodal linkages between truck commerce, bus, rail, pedestrians and roadways. Economic development initiatives are included in the capital improvements program to support preservation of residential neighborhoods; encourage neighborhood investment; improve commercial centers to better serve the needs of area residents; develop and improve community facilities that provide valuable service and programs; provide safe and convenient pedestrian access and environment; ensure public safety; and improve technology in several District agencies. Capital investment, involving the development and maintenance of transportation infrastructure, offers an effective catalyst of productivity growth. Transportation network improvements are vitally needed to foster business attraction, expansion, commercial revitalization, job creation and tourism development. A well functioning transportation system is essential to a growing, healthy economy. Transportation facilities connect markets and facilitate production and trade. Accordingly, this project is required to meet the changing character of the District's economy as new technologies and communication advancements revolutionize the production, consumption and distribution of goods and services. Improvements include: a. Little Falls Road, N.W. Roadway Reconstruction b. Arthur Capper/Carrolsburg Hope VI Roadway Improvements c. Local Parking Studies - Citywide d. Local Street Traffic Studies - Citywide q. Marshall Heights Streetscape Improvements h. Neighborhood Streetscape Improvements Various Locations Traffic Calming Studies Facility: Emergency Transportation Projects 968 STP 968 CE Proposed 80 / 20 / District of Columbia preparation \$968 Total: The purpose of this project is to respond to transportation project emergencies. It is not always possible to plan for emergencies such as roadway vibrations, sunken pavement, falling steel and concrete from bridges, and other urgent needs. This will enable the District the ability to guickly respond to emergencies without delay.

Description: Roadway resurfacing, roadway reconstruction, and roadway upgrading will be combined into this new project. Each contract will be developed by Ward to perform resurfacing, reconstruction and upgrading within the same geographic area. This will produce a comprehensive improvement of a neighborhood and will reduce disruption in the community. A detailed coordinated plan will be prepared for the entire neighborhood with participation from community leaders prior to the beginning of construction. This plan would include when streets would be closed, parking management issues, movement of vehicular traffic, temporary bus routes and other mitigation measures to facilitate access into and out of the neighborhood.

Upgrading and reconstruction will involce removal of existing roadway pavement and miscellaneous structures and replacing them with new roadway pavements, new curbs, gutters and other structures. Handicap access ramps to sidewalks, improved street lighting and storm water drainage system will also be part of this work. Resurfacing will involve milling of existing roadway surface to approximately two inches and repaving. Work will also include repair of or replace curbs, gutters, sidewalks and miscellaneous structures as necessary. Handicap access ramps to sidewalks, improved street lighting and storm water drainage system will also be part of this work.

In addition, the purchase of two 3,000 horsepower locomotives is programmed for FY05. The aging of the original fleet and the higher horsepower requirements of the bi-level trainsets will require additional power. The proposed locomotive acquisition will require approximately 18 months, with delivery anticipated in FY05.

Sounder trains.

# Key to Codes

#### **PROGRAM CODES AND ABBREVIATIONS**

### (1) CODES FOR PROJECT PHASE

To be used in the Phase Column of Table 1 and 2.

These abbreviations are used after the dollar figures in the tables to indicate the purpose of funding:

Preliminary Engineering	.а
Right-of-way Acquisition	
Construction	. C

### (2) ABBREVIATIONS FOR SOURCE OF FUNDS

To be used in the Funding Source Column of Tables 1, 2 and 3.

Identification of the funding source is for programming purposes only, and does not necessarily represent approval from the appropriate federal agency.

### TITLE I

BR	. Bridge Replacement and
	Rehabilitation Program
CMAQ	. Congestion Mitigation and Air
	Quality Improvement Program
CRP	. Congestion Relief Project
DEMO	
DEMO (HPD)	
	. Federal Lands Highway Program
FRANS	. Federal Reimbursement
	Anticipatory Notes
HES/STP	. Hazard Elimination Safety
	Improvement Program
IC	. Interstate Completion
IM	. Interstate Maintenance
IVHS	. Intelligent Vehicle Highway System
NHS	. National Highway System
NPS	. National Park Service
PTF	. Priority Transportation Fund
SP	. Special Project
STP	. Surface Transportation Program

### FTA TITLE III

### (4) ABBREVIATIONS AND CODES FOR STATUS OF ENVIRONMENTAL REVIEW

To be used in the Environmental Review Column Table 1 and 2.

Identification of the type of environmental work is for programming purposes only, and does not necessarily represent approval from the appropriate Federal agency.

These abbreviations are used to indicate the type of environmental work associated with certain projects:

CE	Categorical Exclusion
	Draft Environmental Impact Statement
EA	
FEIS	Final Environmental Impact Statement
	Determination of Environmental Impact on Parkland
FONSI	•

In addition, the following subscripts are used to indicate the status of this environmental work:

Proposed for Preparation	(1)
Under Preparation	(2)
Prepared for Review	(3)
Approved	(4)
