Visualize 2050: Technical Inputs Solicitation Approval
and Plan Development Kickoff

Action: Approve the TPB’s Technical Inputs Solicitation document.

Background: TPB is updating its long-range transportation plan and the first step of the update is to define the process and schedule for including projects, programs, and policies in the air quality conformity analysis. The Technical Inputs Solicitation (TIS) document defines the process and schedule and TPB will be asked to approve the TIS to kick off the plan and TIP development. After the TIS is approved, to inform the Visualize 2050 Constrained Element, staff will provide a list of current plan projects that identifies which projects are currently active and underway, and which projects are in a developmental stage where the TPB goals and priorities can be used to influence the scope of such projects.

- **Memo – Visualize 2045 Project List Memo**

MEMORANDUM

TO: Transportation Planning Board
FROM: Lyn Erickson, Plan Development and Coordination Program Director
SUBJECT: Visualize 2045 Project Lists – Zero-Based Budgeting Approach for Air Quality Conformity Inputs for Visualize 2050
DATE: February 9, 2023

The National Capital Region Transportation Planning Board (TPB) is updating its long-range transportation plan, which will be called Visualize 2050. For the plan's Constrained Element, TPB is asking all member agencies to re-examine and re-submit projects from the current plan (Visualize 2045) project list based on TPB's policy priorities and the findings of the TPB's scenario studies.

The plan update's current focus is on developing the plan's Constrained Element which contains all the projects that must be included in the regional air quality conformity analysis. To initiate this process, TPB and agency staff have examined the current Visualize 2045 Constrained Element project list and following direction from TPB's resolution R19-2021, have organized the projects into two groups (see attached project lists). The two groups to be used to update the projects for Visualize 2050 include: (1) projects that are either under construction OR have received local, state, federal or private funding (funded/committed projects) and (2) projects that are planned and not under construction or with funding committed (developmental projects).

All listed projects are in the currently approved Visualize 2045 plan and are to be re-examined by the TPB member agencies as they decide what projects to submit for Visualize 2050. The TPB intends to retain the projects from the funded/committed project list in the Visualize 2050 plan. The TPB will approve the new Visualize 2050 project list in fall 2023.

What projects qualify for which list?

Funded/Committed (green list) projects are projects that are active, under construction, or have dedicated funding in the near future, and they are intended to be retained in the Visualize 2050 project list. The TPB recognizes the limited opportunities to make changes to projects that are under construction. The TPB, however, urges its member agencies to re-examine these projects and consider changes, where appropriate, that would better advance the TPB's policy priorities and goals.

Developmental (orange list) projects are projects that are not yet under construction, and do not have short term dedicated funding. The TPB expects its member agencies to re-examine these projects and resubmit them with changes as needed to better advance the TPB's policy priorities and goals for inclusion in Visualize 2050. Comments on these projects can help provide feedback on projects that are in a developmental stage where the TPB goals and priorities can be used to influence the scope of such projects.

How were these lists developed?

TPB staff and member agency staff reviewed 267 Visualize 2045 project records from Project InfoTrack, the TPB's project database and identified those projects that are under construction or had dedicated, short term funding. It must be noted that often a single project listed in the TPB constrained element has multiple segments due to phasing plans for project implementation/construction. Working with the member agency staff, these multiple segments of the same project have been combined and listed as a single project. Those using the project lists will still be able to view the detailed project information associated with each project segment via the links included in the files. Projects that are under construction or had dedicated, short term funding were added to the green list. All others were added to the orange list.

What happens next with these lists?

Member agencies will use these lists as they start internal discussions on what projects they will submit for inclusion in the update.

TPB staff will set up one facilitation meeting for each state in March/April. These facilitated sessions will provide an opportunity for agency staff to hear about the priorities or inputs for the update from their respective TPB members.

All public comments received by the TPB (TPB Comment page) will be shared with the transportation agency staff to inform their deliberations and decisions. A new comment form has been developed to make the process user friendly and efficient to organize the comments in a manner that helps the agencies.

Once project inclusion decisions have been made by agencies, all project data and information, regardless of which list a project came from, must be re-entered into the database by June 30, 2023.

BACKGROUND

The TPB approved its current plan and TIP on June 15, 2022. The federal agencies approved the conformity determination for the plan and TIP on August 25, 2022. The plan and TIP approved in 2022 were based on project submissions that were approved by the TPB in Resolution R19-2021 in June 2021 for inclusion in the plan and TIP analysis. As part of Resolution R19-2021, the TPB further directed its staff to initiate an update to the 2022 plan with a target completion date of 2024 and said that the updated Plan "will be based on the concept of 'zero-based budgeting' where all projects, including those currently included in the Plan, must be resubmitted for consideration in such Plan."

"ZERO-BASED BUDGETING APPROACH"

From the January Visualize 2050 FAQ:

- TPB Resolution, R19-2022, which called for a "zero-based budgeting" approach to update projects, also stated that "that projects currently under construction or currently funded with federal, state, regional, local or private funds shall be exempt from such (re-examination) requirement."

- Projects in the plan are in various stages of project development. Those that are currently funded and/or under construction are carried in the plan until they are completed and are far enough along where the likelihood of change is small. There are also projects for which funding is reasonably expected to be available, yet no funding has been committed or spent. A zero-based budgeting approach will help focus efforts on projects that are in a developmental stage where the TPB goals and priorities can be used to influence the scope of such projects, including dropping them from further consideration if they do not meet TPB goals and objectives.
- Consistent with TPB Resolution R19-2021, step one of the zero-based budgeting approach is to determine which projects are under construction or currently funded and those that are not. The TPB intends to retain projects under construction OR that have funding in the updated plan and as such would be exempt from resubmission for consideration for inclusion in the plan. The TPB, however, urges its member agencies re-examine these projects and consider changes to the project where appropriate.
- Projects that are unfunded are not exempt and require re-examination and re-submission. Member agencies will be asked to re-examine the need, scope, and plans to implement the remaining projects that are not under construction and have no funds expended and to propose changes as appropriate.
- The intent of this approach is to develop a list of projects for implementation by the member agencies that would better advance the TPB's regional goals and policy priorities, and that would better reflect the findings from various scenario studies conducted by the TPB. Factors, including the changing prospects for travel in the future as a result of the pandemic-related disruptions and the urgency to address the impacts of climate change by reducing on-road greenhouse gas emissions, should be considered as part of this re-examination.

NEXT STEPS

Technical Committee and TPB members should use the project lists to start discussions on the projects that will be submitted for inclusion into Visualize 2050. Stay tuned for facilitated listening sessions to be scheduled in March/April. TPB staff will also collect public comment on individual projects from the Visualize 2045 project list and distribute feedback received to member agencies. Project inputs with all updated project information must be completed and entered into the database by June 30, 2023.

Information will be available on the new Visualize 2050 website, visualize2050.org, which will be under construction until the TPB approves the TIS which officially begins the plan update (February 15, 2023).

Part A: Zero-Based Budgeting "Funded/Committed/Exempt" Project List - District of Columbia

This is a list of Visualize 2045 projects that are intended to be included into the fiscally-constrained Visualize 2050 project list. These projects are active, are funded, and/or are under construction.

*Note: Complete project and project segment information can be found at the links in the Project ID Column at the far right of the table. "Multiple segments" refers to projects with multiple records that may be located along different segments of roadway. There is a link for each segment in the Project ID column.

**Note: These projects will still need to be re-entered into Project InfoTrak to reflect the most current updated project information and cost. Agencies may opt to remove or change these projects at their discretion.
