

Washington-Baltimore Regional Air Passenger Survey (APS) Response Rate and Quality Study

Aviation Technical Subcommittee Meeting
May 27, 2021

ICF Study Team

- **Heather Driscoll, MS – Survey Director:** 20 years of experience in survey methodology and management; Manages large and complex surveys across a variety of content areas, including transportation.

- **Olivia Saucier, MS, PMP – Survey Manager:** Managed over 40 survey projects with complex fielding timelines, including transportation surveys; Experience as qualitative lead and report manager.

- **Zoe Padgett, MS – Survey Methodologist:** 5 years of experience working on large-scale federal surveys, primarily in education; Expertise in survey design and questionnaire development; Masters degree in Survey Methodology from the University of Maryland

Tasks

- **Task 1:** Technical Advisory Committee (TAC) Meetings
- **Task 2.1a:** Interviews with 6 key informants
- **Task 2.1b:** A literature review of APS methodologies
- **Task 2.2:** A review of “big data” sources
- **Task 2.3:** Review the results of the TPB’s longitudinal analysis
- **Task 3.** Airport Site Visits

Recommendations – Highlights

- **1.2:** Conduct experiments on all new methods
- **2.1:** Transition to electronic data collection
- **2.3:** Offer incentives to participants
- **4.2:** Reduce item nonresponse by addressing perceived invasiveness of origin and trip questions
- **6.1:** Include airport employees in the survey

1.2: Conduct experiments on all new methods

- Allows for analysis of how changes in methodology can impact trend data.
- Provides a chance to test out the logistics of new procedures before implementing them in the full-scale collection.
- Tests the effects of any changes on data quality and response rates.
- Will entail additional costs.
- May slow down the adoption of new design features because these must be tested and assessed before transitioning to “full-scale” data collection.

2.1: Transition to electronic data collection

- Better data quality due to skip logic which only shows questions that apply to the respondent
 - Easier to include additional questions and complex skips
- Reduced errors in data processing, particularly in interpreting handwriting
- Potential lower costs because of savings on printing and data processing
- Simpler multilingual administration

2.3: Offer incentives to participants

- Incentives have been shown to increase participation and motivate people who would otherwise not be interested in participating
- Many kinds of survey incentives exist
 - A raffle approach may be more practical for the airport context
- Based on the length of the survey, TPB may want to offer a larger raffle incentive of up \$500
- TPB could experiment with different levels of incentives to determine the point of diminishing returns

4.2: Perceived invasiveness of questions

- The current survey asks:
 - Origin address
 - Whether origin is a private residence
 - Whether respondent lives alone
 - How long the home will be empty (length of trip)
- Survey protocol says little about privacy and data security
- Redesign the instrument to minimize perceived invasiveness, including removing questions or changing the type of response required
- Redesign data collector materials to address privacy

2. What is the address of the place you started your trip today?

Street Number	Street Name	City Quadrant (e.g., SW, NE)
City	State	Zip Code
Hotel/Motel or Business Name		

B. ABOUT YOUR GROUND TRIP TO RONALD REAGAN WASHINGTON NATIONAL AIRPORT:

1. Where did you start your ground trip to this airport (DCA)? (Check ONE answer)

- 01 Private residence
- 02 Hotel/Motel
- 03 Short term rental (e.g., Airbnb, VRBO)
- 04 My regular place of employment
- 05 Another place of business
- 06 Other: _____

4. How many people live in your household, including yourself?

_____ Person(s) (Write '1' if you live alone)

1. If you live locally, how many nights will you be away?

_____ Night(s) (Write '0' if you will return today)

6.1: Include airport employees in the survey

- Employee commuting patterns are different than air passenger travel choices
- Including employees in ground access studies will improve representation and accuracy of the resulting data
- Including employees in the APS aligns the project with COG's intentional focus on social and racial equity
- TAC members indicated that the easiest way to reach employees would be through their employers.
 - Employers at the airport can be reached through tenant group meetings, which are held monthly.
 - TPB could coordinate with employers to send a survey link to all staff via email.

Thank you!
