DRAFT September 2007 Preliminary Greenhouse Gas Inventory Projection for the Washington, DC-MD-VA Region

Preliminary greenhouse gas emission estimates were developed for the metropolitan Washington region for use in discussing possible emission reduction goals. The region covered includes all counties considered part of the 8-hour ozone nonattainment area. Given data availability, 2005 was selected as the base year. Projections were developed by applying growth factors to the base year emissions by sector.

2005 Base Year Estimates

Source	General Methodology	Possible Improvements
Energy/Electrical Generating Units (EGUs) and Electricity Import	Emissions for power plants in the COG Region provided by EPA Clean Air Markets Division. Imports based net KWh imports and on EIA regional emission factor.	Additional research on supply, demand, and net imports of electricity is needed.
Transportation Combustion	All emissions provided by COG DTP, see attachment.	Compare to statewide motor fuel consumption scaled to region.
Residential Fuel Use	Total Residential Natural Gas, Distillate Oil, and Residual Oil by State provided by U.S. DOE EIA, scaled to region using population.	Possible collection of data locally?
Commercial Fuel Use	Total Commercial Natural Gas, Distillate Oil, and Residual Oil by State provided by U.S. DOE EIA, scaled to region using population.	Allocate statewide emissions to region using sales tax data instead of population.
Industrial Fuel Use	Total Industrial Natural Gas, Distillate Oil, and Residual Oil by State provided by U.S. DOE EIA, scaled to region using population.	Additional research on appropriate scaling factors needed.
Other Fuel Use	Total "Other" Natural Gas, Distillate Oil, and Residual Oil by State provided by U.S. DOE EIA, scaled to region using population.	
Commercial Aviation	Total U.S. Commercial Aviation Emissions from EPA GHG Inventory scaled to region based on Bureau of Transportation Statistics Total Miles for All Arriving and Department Flights. Divided by two.	Possible EDMS model revisions.

EIA emission factors were used to convert fuel consumption to CO₂ emissions, and are generally consistent with IPCC, ICLEI, and EPA State Inventory Tool (see attached emission factor table). Additional important sources to add to the preliminary inventory include wastewater treatment, solid waste, emissions of high-GWP gases, and land use, land use change, and forestry.

2020 and 2030 Emission Projections

Outyear emission projections were developed by applying the growth factors in the table below to the preliminary 2005 Base Year Inventory.

Growth Factors Applied for Projection Inventory

	2020	2030	Growth Factor
Energy/Electrical	20%	33%	EIA Total Electric
Generating Units			Power
(EGUs) and			
Electricity Import			
Transportation	25%	38%	COG DTP
Combustion			
Residential Fuel	22%	33%	COG Population
Use			•
Commercial Fuel	25%	39%	COG Employment
Use			. ,
	10%	19%	EIA Total Industrial
Industrial Fuel Use			Energy
	18%	31%	EIA Total Energy
Other Fuel Use			Consumption
Commercial	35%	40%	EIA Jet Fuel
Aviation			
Others:			
Population	22%	33%	COG
Households	23%	35%	COG
Employment	25%	39%	COG

Source: U.S. Department of Energy, Energy Information Administration, Annual Energy Outlook 2007. Transportation growth percentage calculated based on COG DTP projections. COG Round 7.a Cooperative Forecast projections for Population, Households, and Employment are provided for comparison purposes.

Results

The table and graph below provide the preliminary greenhouse gas emission projections for the Washington region.

2005
DRAFT Regional Greenhouse Gas Emission Estimate for the Washington, DC-MD-VA Region (YR 2005)
(Million Metric Tonnes CO2e)

	Suburban	District of Columbia	Northern Virginia	Total
	Maryland	Columbia	virginia	Total
Energy/Electrical Generating Units (EGUs)	15.35	0.62	3.58	19.56
Transportation Combustion	10.88	1.94	9.77	22.58
Residential Fuel Use	2.85	0.98	2.47	6.30
Commercial Fuel Use	1.95	1.19	1.65	4.79
Industrial Fuel Use	0.56	0.00	1.29	1.85
Other Fuel Use	0.64	0.12	1.00	1.76
Commercial Aviation	-	-	4.02	4.02
Gross Emissions	32.23	4.85	23.78	60.85
Import of Electricity	-	1.68	3.06	4.74
Regional Total	32.23	6.52	26.84	65.59

2020
DRAFT Regional Greenhouse Gas Emission Estimate for the Washington, DC-MD-VA Region (YR 2020)
(Million Metric Tonnes CO2e)

	Suburban	District of	Northern	
	Maryland	Columbia	Virginia	Total
Energy/Electrical Generating Units (EGUs)	18.43	0.75	4.30	23.47
Transportation Combustion	13.47	2.16	12.51	28.14
Residential Fuel Use	3.47	1.20	3.01	7.68
Commercial Fuel Use	2.43	1.49	2.06	5.98
Industrial Fuel Use	0.62	0.00	1.42	2.03
Other Fuel Use	0.76	0.14	1.18	2.08
Commercial Aviation	-	-	5.42	5.42
Gross Emissions	39.17	5.73	29.91	74.81
Import of Electricity	-	2.01	3.68	5.69
Regional Total	39.17	7.74	33.58	80.50

2030
DRAFT Regional Greenhouse Gas Emission Estimate for the Washington, DC-MD-VA Region (YR 2030)
(Million Metric Tonnes CO2e)

(Million Metric Tollies Coze)				
	Suburban	District of	Northern	<u>.</u>
	Maryland	Columbia	Virginia	Total
Energy/Electrical Generating Units (EGUs)	20.42	0.83	4.77	26.01
Transportation Combustion	15.01	2.29	13.95	31.25
Residential Fuel Use	3.78	1.30	3.28	8.37
Commercial Fuel Use	2.71	1.66	2.29	6.65
Industrial Fuel Use	0.67	0.00	1.53	2.20
Other Fuel Use	0.84	0.15	1.31	2.31
Commercial Aviation	-	-	5.62	5.62
Gross Emissions	43.43	6.23	32.77	82.43
Import of Electricity	-	2.23	4.07	6.30
Regional Total	43.43	8.46	36.84	88.73
