

# Gen3 Model Development Project Update

Presented by: Joel Freedman

TPB Travel Forecasting Subcomm.  
January 27, 2023

# Topics

- Phase 2 work completed since last update
- User guide
- Schedule update

**Phase 2 work completed  
since last update**

A decorative graphic on the right side of the slide consists of two overlapping triangles. The larger triangle is on the left, and a smaller one is on the right, partially overlapping the first. Both triangles are filled with a light gray color and have a subtle gradient.

# Calibrated the following models

- Auto ownership
- Work location choice
- Joint tour frequency and composition
- Trip mode choice
- Coordinated Daily Activity Pattern (to have fewer non-workers and senior staying home)
- Non-mandatory tour frequency
- Non-mandatory destination choice constants for attractions to DC

# Also...

- Update implementation to use either MambaForge or Anaconda
  - Anaconda requires commercial license if organization is 200 persons or more
  - MambaForge is free
  - Model runtime is ~20 minutes longer on MambaForge
- Updated the model to output stop-to-stop tables for commuter rail
- Finished a few sets of documentation
- Working hard on validation
  - Model was over-estimating non-mandatory travel to DC
  - Transit ridership is mostly looking good.

# **Schedule Update**

# Schedule Update

- Phase 2 model system implemented
- Phase 2 models estimated
- Phase 2 models calibrated (mostly)
- Validation underway; highway and transit look similar to v2.4 model results.
- Documentation underway
