*2020-21 Winter Outlook &*

*Tools to Help You*

**Chris Strong**  
National Weather Service  
Baltimore/Washington

# Outline

- **What is “Normal”**
- **What we have seen in the past**
- **This winter’s outlook**

# What is a “Normal” Winter

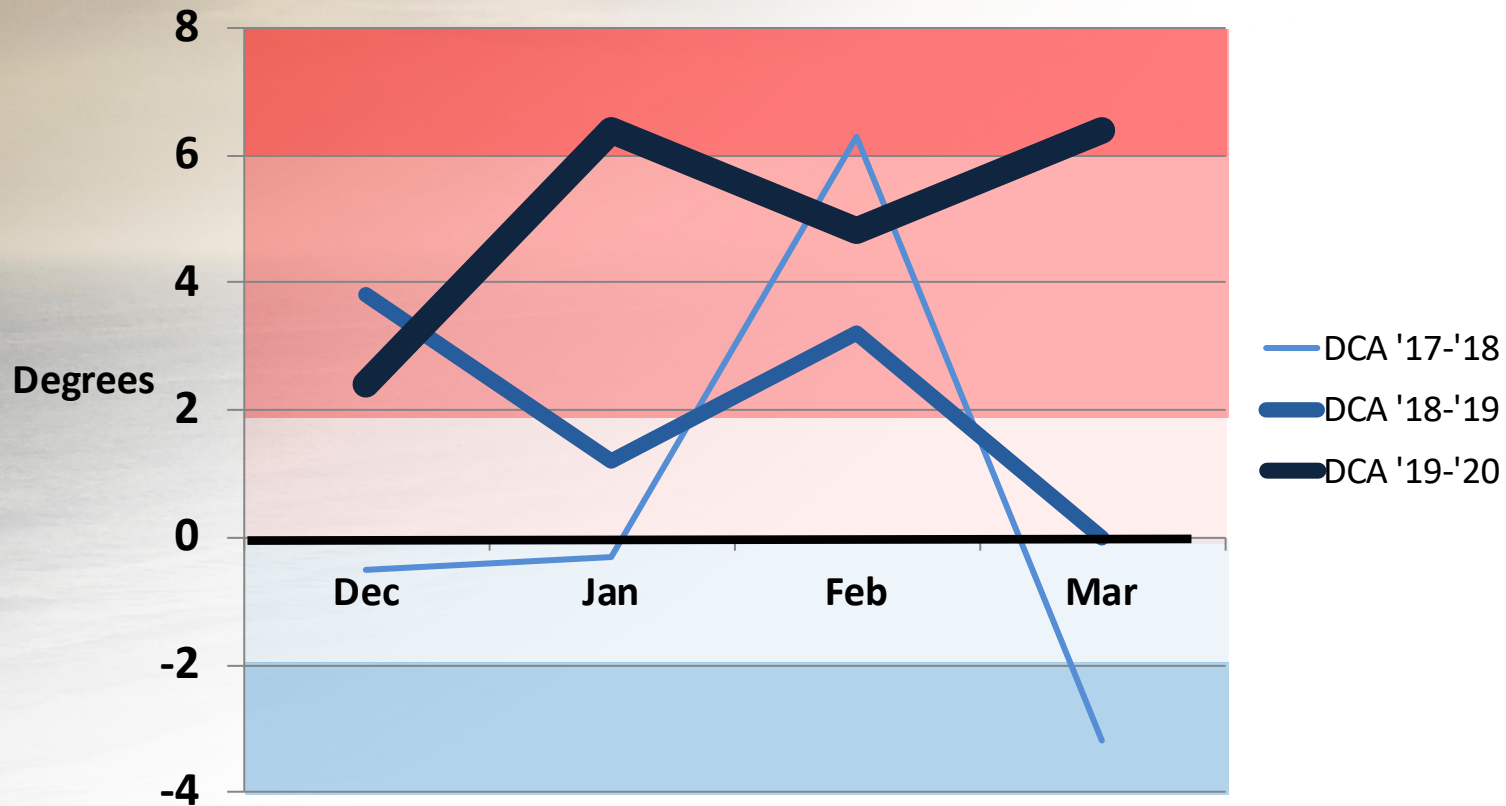

1981-2010

<b>DCA</b>	<b>Nov</b>	<b>Dec</b>	<b>Jan</b>	<b>Feb</b>	<b>Mar</b>
Temperature (High/Low)	58°/41°	47°/33°	43°/29°	47°/31°	56°/38°
Snowfall 14.5” total	0.5”	2.3”	5.6”	4.8”	1.3”

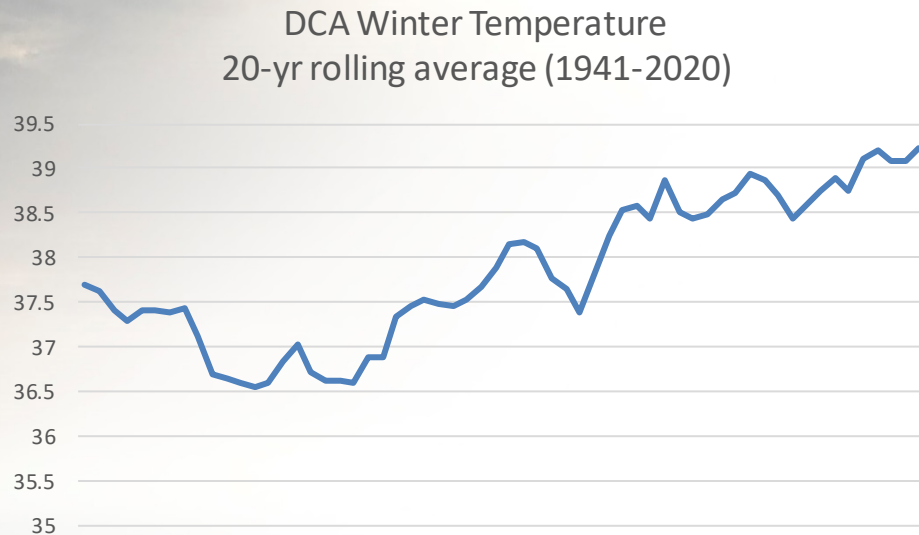

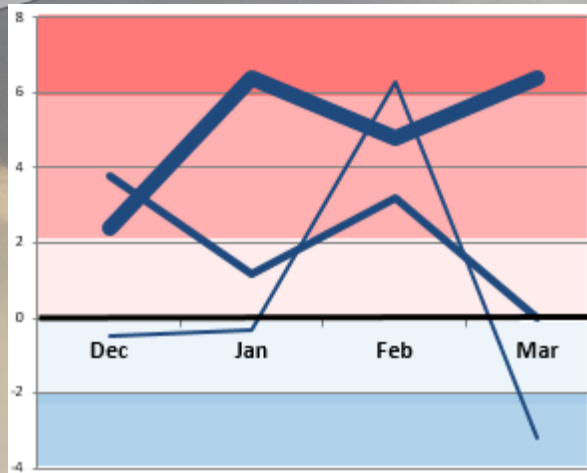

# Past 3 Winters (DCA) Temperature

- Mild ... Last winter was 7<sup>th</sup> warmest on record

## Departure from Normal

# Past 3 Winters (DCA) Temperature

- **At DCA, a winter as warm as the last one happened:**
  - Once in the 2<sup>nd</sup> half of the 20<sup>th</sup> century,
  - 4 times in the past 20 winters, and
  - 2 times in the past 4 winters

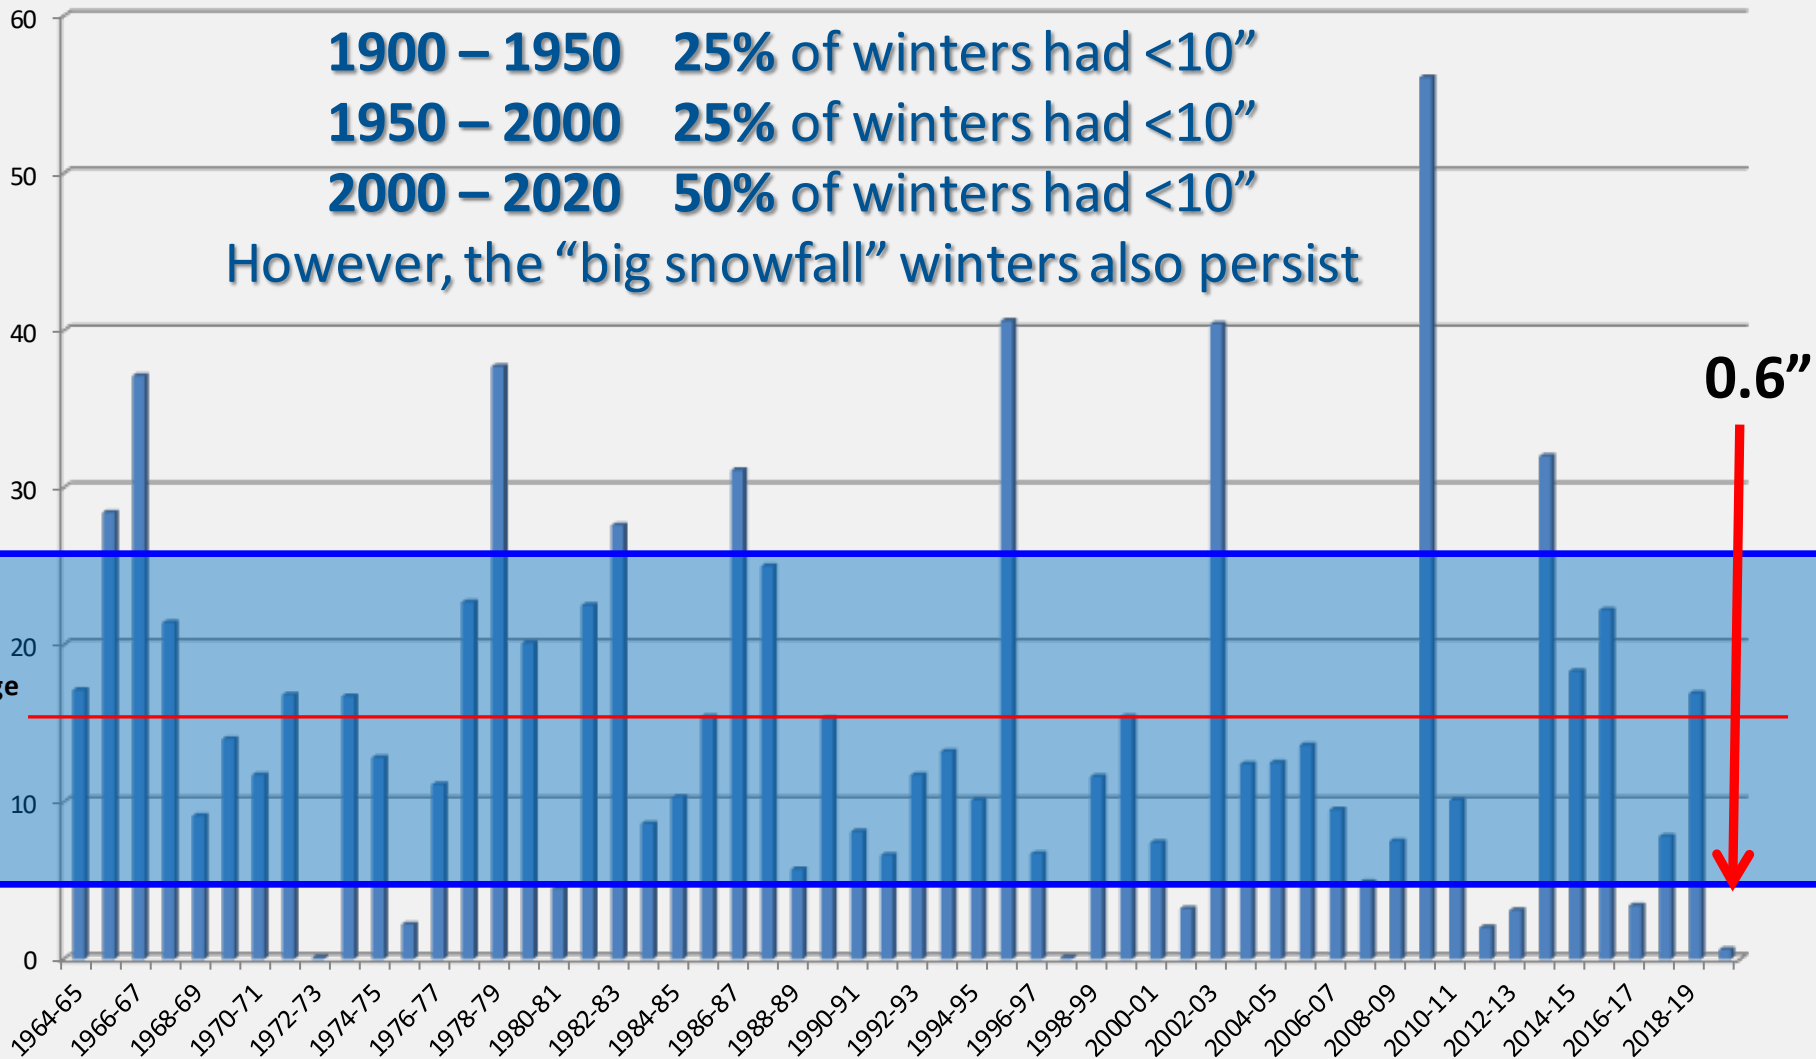

# DCA Annual Winter Snowfall

# Mid-Atlantic Winter Outlook 2020-21

- **El Niño/La Niña Cycle**

- **La Niña**

- More storm tracks to our west, can result in more freezing rain.

- **Mid-Atlantic Outlook:**

- **Temperature**

- Lesser chance of long-lasting cold
- Fewer arctic outbreaks

- **Precipitation**

- No strong signal on more/less precipitation at this time

**Everything we will discuss is on our  
NWS Winter Page**

**[www.weather.gov/washington/winter](http://www.weather.gov/washington/winter)**

# NWS “Headlines”

- **Winter Storm Watch**
  - Possibility of 5+” snow
  - ~1-3 days in advance
- **Winter Storm Warning** 5”+
- **Winter Weather Advisory** 1-4”
  - Expectation
  - ~12-24 hours in advance

# Why Uncertainty?

- **For winter precipitation threats...**
  - Dozens of international models  
(not simply U.S. vs. European)
  - Looking further into the future, they become increasingly hazy on...
    - where -and-
    - how strong
  - ...next weather system will be

**Let's look at one storm for example...**

# Why Uncertainty?

## Dozens of Model Forecasts

European

American

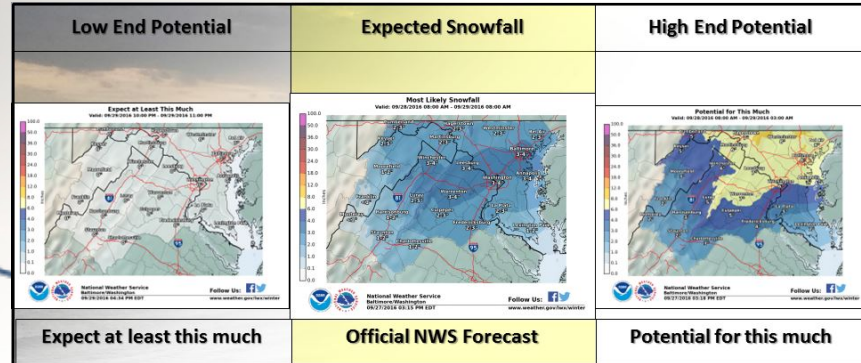

Canadian

United Kingdom

# As Event Nears, “Range of Possibilities” Shrinks & Level of Forecast Detail Increases

Threat Level

Possible Amounts

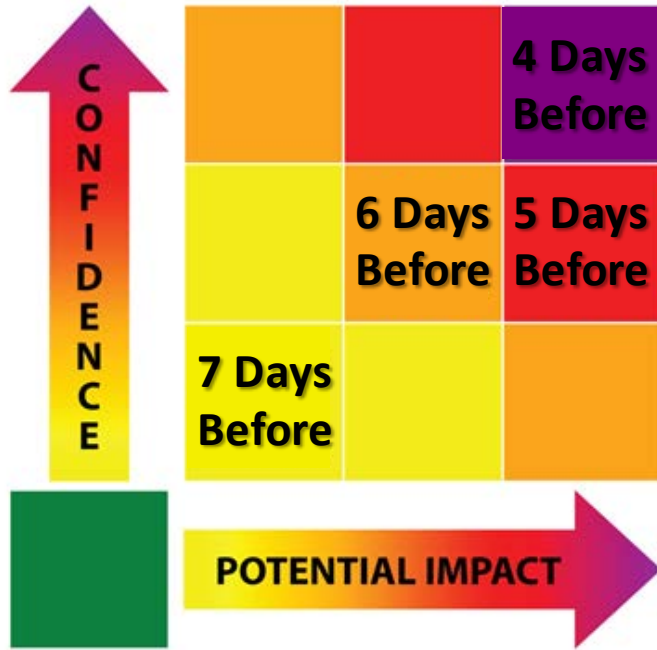

Small Weather,  
BIG Impact

Range of Possibilities

# 3-7 Days in Advance Winter Storm Threat

- **A real-world example:  
Mid-Atlantic Blizzard of Jan 2016**
  - 7 days of threat
  - Threat increased
  - “**High**” threat 4 days before first flakes

<b>High</b>	<b>High threat of high impact winter storm.</b> Potential impacts include significant travel delays, closures, and threats to life and property. Plan ahead to minimize impact on you and your family.
<b>Moderate</b>	<b>Moderate winter storm threat.</b> Potential impacts include significant travel delays and closures. Plan ahead to minimize impact on you and your family.
<b>Enhanced</b>	<b>Enhanced winter storm threat.</b> Primary threat is disruption to travel.
<b>Slight</b>	<b>Slight winter storm threat.</b> If threat materializes, may cause travel disruptions.
<b>None</b>	<b>No significant winter storm threat is currently expected.</b> However, light wintry precipitation may still be possible.

# 0-3 Days in Advance

## Range of Possibilities

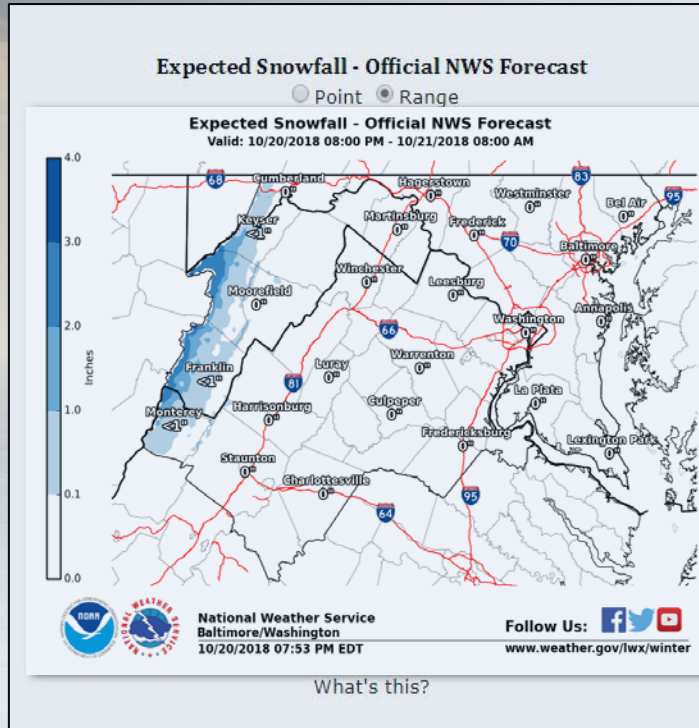

## Snow Accumulation

### Current Snowfall Expectation

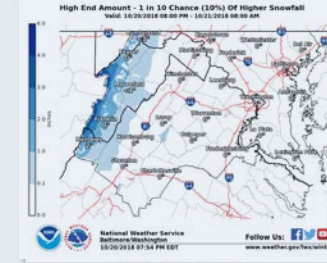

What our forecasters expect now.

Based on the latest, constantly-evolving models

### High End Amount

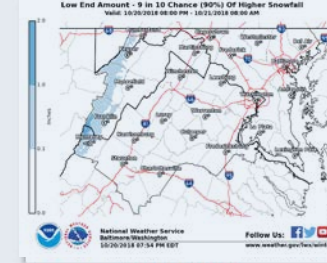

#### 1 in 10 Chance (10%) of Higher Snowfall

What's this?

### Low End Amount

#### 9 in 10 Chance (90%) of Higher Snowfall

What's this?

### High-End Potential

How much/little could it be, given what some models still show

### Low-End Potential

# 0-1 Days in Advance

## Potential Winter Commuting Hazard

### Recipe for Traffic Disaster

- 1" or less of snow
- During urban rush hour
- Sub-freezing road temperatures

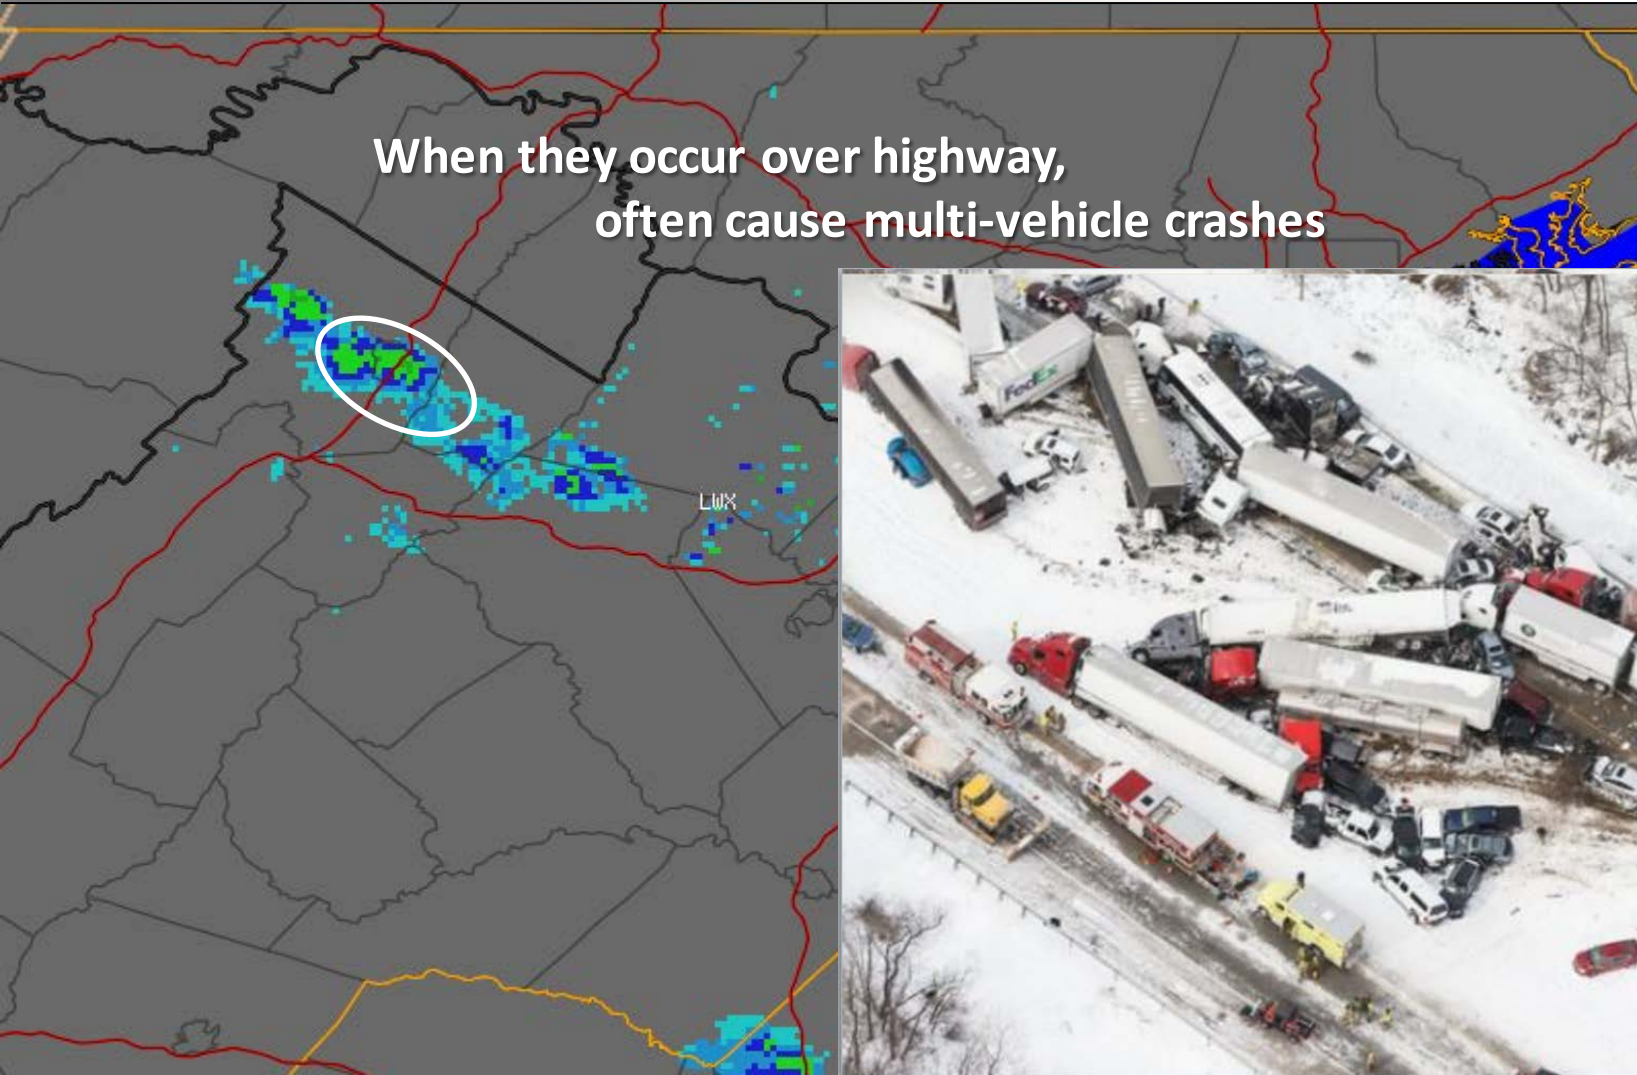

**Together, these often create gridlock.**

*Potential Winter Commuting Hazard Statement (~24hrs in advance)*  
if we see a chance of these coming together

# 0-1 Days in Advance Snow Squall Warning

When they occur over highway,  
often cause multi-vehicle crashes

# Social Media

The screenshot shows the Facebook interface for the "US National Weather Service Baltimore/Washington" page. The page header includes the Facebook logo, a search bar, and the user's name "Chris Strong" with a "Home" button. The page name "US National Weather Service Baltimore/Washington" is prominently displayed, along with a "Like" button and a "Create a Page" button. Below the header, there are several sections: a "Wall" section with a post from "US National Weather Serv..." dated "Yesterday at 11:41am"; a "Recommendations from Friends" section listing users like Carrie Larsen and Bryan Jackson; and a "People You May Know" section listing users like Patty Ekster, Joe Veres, Dan DiTullio, Steven Pfaff, and Roger Pierce. The page also features a "Share" button with options for Post, Photo, Link, and Video, and a "Write something..." text box. The left sidebar contains the "NATIONAL WEATHER SERVICE" logo, the text "BALTIMORE / WASHINGTON WEATHER FORECAST OFFICE", and navigation links for Wall, Info, Friend Activity, Photos, and About.

# Summary

- **The NWS – DOT/SHA partnership has helped develop new ways to communicate snow forecasts:**
  - Days 3-7 Winter Storm Threat level
  - Days 0-3 “Range of Possible” Snow Accumulations
  - Days 0-1 Potential Winter Commuting Hazard Statement & Snow Squall Warning
- **Previously existing communication**
  - Watch / Warning / Advisory
- **NWS winter outlook 2020-21**
  - Fewer arctic outbreaks, but we will get them.
  - Higher likelihood of freezing rain & mixed precipitation
