# Drivers of Growth

Trend analysis performed on historical Bureau of Economic Analysis (BEA) employment estimates:

- Three average annual growth trends calculated: slow, normal, and rapid
  - **Slow:** based on 0.60% from Moody's one-year forecast change in jobs, 2012-2013, for the DC metro area
  - **Normal:** based on 1.19% average annual growth from 1990 to 2010 – a period on boom and recessions
  - **Rapid:** based on 1.28% average annual growth from 2002 to 2008 – a period of post recessionary growth and the beginning of another recession
- **Slow and Normal** growth determined employment from 2010 to 2040:

From 2010 to 2015 growth starts at 0.60% and ramps up, year-over-year, to just under 1.19% by 2015. From 2015 to 2040 growth is a consistent 1.19% year-over-year.

# Forecast Allocation

Once forecast control totals are determined, they are distributed among 376 Transportation Analysis Zone (TAZ) boundaries for each forecast year:

	<b>Round 8.2</b>
<b>Year</b>	<b>Employment</b>
2010	510,300
2015	532,000
2020	564,400
2025	598,800
2030	635,300
2035	674,000
2040	715,100
