

MEMORANDUM

TO: TPB Technical Committee
FROM: Nicole McCall, Transportation Planner
John Swanson, Transportation Planner
SUBJECT: FY 2022/23 Transit Within Reach Technical Assistance Funding Recommendations
DATE: September 10, 2021

This memo provides information on the recommendations of the Selection Panel for the FY 2022/23 round of technical assistance under the Transit Within Reach Program. The goal of this new program is to move small, high-impact projects that improve bike and walk access to transit into preliminary design or preliminary engineering (up to 30%). The panel met in August and recommended 3 projects for funding in FY 2022/23. The TPB is scheduled to vote on the panel's recommendations on September 22.

FUNDING RECOMMENDATIONS FOR FY 2022/23

A total of \$250,000 is available in FY 2022/23 through the Unified Planning Work Program (UPWP) Technical Assistance Regional Transit Account. The Transit Within Reach Selection Panel recommends the 3 projects below for funding.

The recommended slate of projects is consistent with the Transit Within Reach Program Priorities:

- All 3 projects are in Transit Access Focus Areas and improve bike/ped access to high-capacity transit
- All 3 projects support access improvements that will increase transit ridership and/or utilization of available ridership capacity
- All 3 projects will improve access for low-income communities and communities of color; 2 projects are within Equity Emphasis Areas
- All 3 projects demonstrate strategies to advance project to construction

Projects recommended for funding:

Preliminary Design for new shared-use path connection within Broad Run Transit Access Focus Area (TAFA)

City of Manassas, \$74,000

This project will develop the preliminary design for a new shared-use path connection to the Broad Run VRE Station. It will tie in with the VRE Broad Run Expansion project which is in final design and will provide new platform access north of the railroad tracks, multimodal parking facility, and a pedestrian tunnel to access the platform. This project will provide the last missing link for a safe and direct bicycle and pedestrian access from the City to the expansion of the Broad Run Station. The final products will include a survey, preliminary design plans and typical sections for the trail, and a cost estimate for final design and construction.

Preliminary Engineering of the Walter Johnson Road Shared-use Path Connection to the Germantown MARC Station

Montgomery County, \$85,000

This project will complete the preliminary design for a new shared-use path. This facility will give people walking and biking from nearby residential and commercial areas a consistent, comfortable, and direct connection to the Germantown MARC station. The Germantown station is the highest ridership station in the MARC system, excluding Union Station on the Brunswick line, and ridership growth is currently constrained by parking availability since most riders arrive by car. This connection will support growth in ridership by reducing the need for patrons to drive from nearby locations. The final products will include the preliminary design plans and cost estimate for the Walter Johnson Road Shared-Use path.

Suitland-Silver Hill Neighborhood Pedestrian and Bike Access Improvement Project

Prince George's County, \$85,000

This project will develop 30 percent designs for safe pedestrian, bicycle facilities, and traffic calming connecting the neighborhood along Navy Day Drive, Navy Day Place, and Glenn Drive to the Suitland Metro Station. Approximately 23 percent of the households within the project area do not have access to a car and the neighborhood lacks infrastructure to support safe walk access to the station. Planned improvements include new sidewalk, path, and curb, traffic calming elements, signing and pavement markings, pedestrian-scale lighting, potential landscaping, and new bus shelters. The final products will include the preliminary design plans, a topographic survey, and quantity estimates.

APPLICATION PROCESS

On May 3, 2021, the TPB issued a call for projects for the FY 2022/23 round of Transit Within Reach Technical Assistance. The deadline for application submissions was July 1, 2021. Applicants were invited to submit optional abstracts which provided applicants an interim opportunity for TPB staff to review project concepts and to provide feedback on how to develop stronger applications.

Technical assistance was offered in amount of up to \$85,000 for preliminary design or engineering projects. The Call for Projects and the application placed a focus on improving walk and bike access to transit (in particular in Transit Access Focus Areas), access improvements that will increase transit ridership and/or utilization of available ridership capacity, access for low-income and communities of color, collaboration with other agencies or jurisdictions, and strategies to advance projects to construction.

The TPB received 6 applications in response to this solicitation. Total requested funding for the entire application package was \$474,000.

For this application cycle, \$250,000 is available from the Regional Transit UPWP Technical Assistance Account.

SELECTION PROCESS

The selection panel included the following members:

- James Carrington, Chair of Bicycle and Pedestrian Subcommittee
- Deanna Archey, Chair of Regional Public Transportation Subcommittee
- Charlene Howard, TPB staff
- Nicole McCall, TPB staff
- John Swanson, TPB staff

The selection panel met on August 17 and August 20 to review the project applications and develop a list of recommended projects for the FY 2022/23 round of technical assistance. The selection panel used program priorities and their own extensive industry knowledge to assess the proposed projects. The selection panel members individually reviewed and scored each application in advance based on their assessments of the projects as well as regional criteria. The panel members then used their scores to divide the applications in rankings of high/medium/low. The rankings served as a starting point for the panel's collective discussion.

Based upon discussion of the regional and local merits of the applications, the selection panel developed a list of 3 projects to recommend to the TPB for approval. The panel believes this package of projects will be locally and regionally beneficial. In developing the list, the panel aimed to equitably allocate funding across the region and across the modes of transit, while also attempting to create a slate of projects that improve walk and bike access to high-capacity transit.

PROPOSED PROJECT COMPLETION TIMELINE

On September 22, 2021, the TPB will be asked to approve the proposed slate of 3 projects for funding under the FY 2022/23 Transit Within Reach technical assistance program. Upon approval of the projects, TPB staff will begin to coordinate with the jurisdictions that have been awarded technical assistance to commence the consultant selection process from the pre-qualified list of TLC consultants. All projects will begin soon after consultant contracts are signed. The projects will be scheduled for completion near the end of calendar year 2022.
