## **B. Transportation Information Services**

COG/TPB staff provided commuter travel information on alternatives to the general public by telephone, website, electronically and through printed information. Means of communication included staffing the Commuter Connections Information Line (800-745-7433), the public email address (ridematching@mwccog.org) and the queued commuters in the TDM System. Statistics on this project are available by viewing the various tables at the end of this report.

## **C. Transportation Information Software, Hardware, and Database Maintenance**

COG/TPB staff continued running, auditing, and printing reports for the monthly purge process, the biweekly end user reports, and the vanpool incentives programs reports. At the end of September 2015, COG and its members were serving 17,905 commuters registered in ridematching. This is an increase of 913 over the prior quarter's 16,992. This figure shows a year over year increase of 1048 from 16,857 at the end of September 2014.

COG/TPB staff continued daily maintenance processes for the Commuter Connections TDM Software System. This included monitoring the web and database servers, moving data among jurisdictions and agencies, making corrections to commute logs for 'Pool Rewards, setting up access to reports for new ridematching coordinators, and making database backups.

During the quarter, COG/TPB staff conducted nine meetings with Media Beef. Staff met with the software development contractor on July 13th and 27th, August 3rd, 17th, and the 31st, and September 8th, 14th, 21st, and 28th. Meeting participants discussed the status of the upgrades of the regional TDM Software system and SchoolPool. Discussion centered primarily on the move to the latest version of Oracle and Wildfly. We also touched on creating a better user experience when searching for employers and improving the accuracy of the search results, enhancements and fixes related to customizing the application's web pages for employers, logging commutes using mobile devices, providing the number of possible pool matches by zip code to other web applications, the Quick Match web service, and improving ridematching algorithms.

Over the last three years, the web server software and database software on which the TDM System depends have undergone significant changes. Red Hat has released JBoss 8 (now called Wildfly) and Oracle has released Oracle Database 12c. In order to keep the

regional TDM software products current and secure, COG/TPB staff worked with Media Beef to build and deploy a whole new TDM system. The new TDM system was made available for public use on September 4. The hardware and operating system were upgraded. The database was changed to the latest version, from Oracle 11g to Oracle 12c. The latest version of the web server software, Wildfly 8 also was put into operation. Media Beef supplied documentation on how the new Wildfly web server was set up. The new server will be leveraged to handle the TDM system, SchoolPool, and Reach A Ride. After all this was deployed and running, there was some debugging to do. The server's logging rules were reconfigured and some speed improvements were made. There is a bit more to do in the debugging realm, and so COG/TPB staff continued to work on a problem that surfaced after the new system was operational. If an administrator user lets his session time out, the next time (s)he tries to put a new commuter record into the database, the code does not execute quite as it should, and the generated commuter ID is incorrect. Media Beef is working on a fix to the way the program handles a session that has timed out.

COG/TPB staff worked with Media Beef and the Dulles Area Transportation Association to design, code, test, deploy and operate software for the 2015 Live More Commuter Challenge. The goal of the challenge is to encourage people to "live more by commuting less." Commuters sign up for the Live More Challenge using the TDM web site and then log their commuting trips in the system using customized web pages. The Challenge functions much like the Alexandria Commuter Challenge produced last winter. The software was deployed in late September. Commuters began using it immediately to set up their accounts and take a short survey regarding their commuting habits.

COG/TPB staff continued work on optimizing the list of the region's employers that is used by the software when a commuter account is created. Part of the registration process is for commuters to enter data about their employers. To prevent duplicate employer records, the software presents the commuter with a list of choices based on his input. If the commuter's employer is not on this dynamically computed list, (s)he can enter data for a new employer record. It is important to compute a meaningful and helpful list for the commuter because reducing duplicate employer records makes reporting less difficult. Since new records are entered into the system every day, they will need to be reviewed on an ongoing basis.

Changes to the way the TDM system sends email to commuters had to be made as well, especially for Delaware and Charlottesville. Testing and debugging the new process was completed during the quarter. The new method works reliably, but it is slower. More changes are expected next quarter, primarily in the area of speed improvements.

#### **D. Commuter Information System**

COG/TPB staff maintained the map service and web mapping application for the commute options (Park & Ride) map. Staff received new NAVTEQ Streets data and made updates to the Commute Options interactive map. The current version is a mashup of

data supplied by ESRI servers and data supplied by the Commuter Connections ArcGIS server. To view this map, visit <http://maps.mwcog.org>.

During the same time period, the GRH program provided 503 GRH trips. Eighteen (18) of these trips were “one-time” exceptions accounting for 4% of the total number of GRH trips provided. “Personal Illness” accounted for the largest portion of the GRH trip reasons followed by “Family Emergency.” As of September 30th, a total of 9,488 commuters are currently registered in the GRH database.

COG/TPB staff made no changes to the GRH Participation Guidelines during this quarter.

COG/TPB staff monitored and maintained the TDM System which houses and processes all GRH registration and trip data.

COG/TPB staff held a meeting with the consultants on September 3rd to discuss the survey methodology for the 2016 Baltimore Guaranteed Ride Home Applicant survey.

### **B. Process Trip Requests and Provide Trips**

Between the months of July and September 2015, there were 30 GRH Baltimore applications received. 29 commuters were registered during this period while 88 commuters were re-registered. During the same time period, the GRH program provided forty-seven (47) GRH trips. Two (2) of these trips were "one-time" exceptions accounting for 4% of the total number of GRH trips provided. "Personal Illness" accounted for the largest portion of the GRH trip reasons followed by "Overtime" and "Family Emergency." As of September 30, 2015, a total of 674 commuters are currently registered in the GRH Baltimore program.

COG/TPB staff met with Diamond Transportation Services staff on September 30th to discuss the status of the Washington DC metropolitan region's Guaranteed Ride Home program. COG/TPB staff also continued to work on identifying a GRH Ride provider in Southern Maryland.

**NOTE:** Daily vehicle trips reduced is calculated by multiplying the number of placements by a vehicle trip reduction (VTR) factor. The VTR factor takes into account three types of placements. 1) Drive alone commuters that shift to a commute alternative, 2) current alternative commute users that shift to a higher occupancy commute mode, and 3) current commute alternative users that increase the number of days they use a commute alternative. Daily vehicle trips reduced include both trips to work and trips from work to home. Note the data for Kiosk users/applicants was eliminated in FY09, when the program was discontinued.
