Executive Summary

Overview

The *Bicycle and Pedestrian Plan for the National Capital Region* identifies the capital improvements, studies, actions, and strategies that the region proposes to carry out by 2030 for major bicycle and pedestrian facilities. The National Capital Region Transportation Planning Board (TPB), composed of governments and agencies from around metropolitan Washington, has developed this plan with the support of its Bicycle and Pedestrian Subcommittee. The plan builds upon the 1998 *TPB Vision* to guide the region’s transportation investments into the 21st Century. This is the first all-new regional plan specifically for bicycle facilities since 1995, and represents the first-ever regional pedestrian facilities plan.

In addition to building upon the *TPB Vision*, the *Bicycle and Pedestrian Plan for the National Capital Region* draws on and has been shaped by a number of regional, state, and local policy statements, plans, and studies. These include the TPB’s *Transportation and Community and System Preservation Greenways and Circulation Systems Reports* (published in 2001); the TPB’s regularly updated Constrained Long Range Plan (CLRP) and Transportation Improvement Program (TIP); federal and state guidance on bicycle and pedestrian facilities; and a wealth of state and local bicycle and pedestrian plans from around the region.

The *Bicycle and Pedestrian Plan for the National Capital Region* is intended to be advisory to the CLRP and TIPs, and to stand as a resource for planners and the public. In contrast to the CLRP, the *Bicycle and Pedestrian Plan* includes both funded and unfunded projects – projects in this plan may not yet have funding identified to support their implementation.

Planning Context

A number of federal, state, and local activities, as noted above, provide the planning context (Chapter 1) for this document. Jurisdictions and agencies around the region maintain active bicycle and pedestrian planning and coordination programs. Within this context, the TPB incorporates bicycle and pedestrian considerations into overall regional transportation planning, bike-to-work components of the Commuter Connections program, and the region’s Access for All Committee concerning minority, low-income, and disabled communities. The TPB supports bicycling and walking and their health, community, pollution reduction, and congestion reduction benefits for the region.

Bicycling and Walking in the National Capital Region

The state of bicycling and walking in the Washington region (Chapter 2) includes success stories, challenges, and opportunities for improvement. Data from the U.S. Census, surveys, and

other sources provide an understanding of where bicycling and walking are found throughout the region, as well as who is walking and bicycling. These data may point to opportunities for increasing these activities, and support the need to consider bicycling and walking in overall roadway and transit planning and engineering.

Safety

Bicycle and pedestrian safety (Chapter 3) is a key challenge for the region. The plan describes the scope of the safety problem, its geographic and demographic distribution across the region, and the legal rights and responsibilities of drivers, pedestrians, and bicyclists. Unfortunately, throughout the region bicycle and pedestrian safety issues are found. The region and member agencies are actively pursuing a number of engineering, enforcement, and educational strategies to reduce deaths and injuries.

Existing Facilities

The Washington region benefits from a number of popular bicycle and pedestrian facilities in place in our communities (Chapter 4). The region's transit agencies have also worked to provide access and accommodation of bicycling and walking to and on their systems. A goal of this plan is to complement and augment the existing system of facilities.

Best Practices

Convenient and safe bicycle and pedestrian access is a key goal of the TPB's *Vision*. To help achieve this, the Bicycle and Pedestrian Subcommittee developed a set of recommended best practices (Chapter 5) for the design and implementation of bicycle and pedestrian facilities, as well as for the incorporation of bicycling and walking considerations into overall roadway and transit design. Best practices are based upon national and state laws and guidelines.

Planned Bicycle and Pedestrian Facilities and Improvements

Improvements included on the plan's list of regional bicycle and pedestrian projects (overview in Chapter 6 and the full listing in Appendix A) were identified, submitted and reviewed by agency staffs of TPB member jurisdictions. The plan includes approximately 350 bicycle and pedestrian facility improvement projects from across the region. If every project in the plan were implemented, in 2030 the region will have added over 200 miles of bicycle lanes, over 400 miles of shared-use paths, hundreds of miles of signed bicycle routes (signage without additional

construction), more than 50 pedestrian intersection improvements, and a number of pedestrian/bicycle bridges or tunnels. Two new bicycle and pedestrian crossings over the Potomac would be created, at the American Legion and Woodrow Wilson Bridges, and bridges over the Anacostia River would be improved for pedestrians and bicyclists. In addition, major streetscaping projects would improve pedestrian and bicycle access and amenities in Ballston, Bethesda, Clifton, Haymarket, Manassas, Tysons Corner and other locations.

Costs

Total estimated cost of projects in the draft plan is about \$530 million (2006 dollars). 35% of the plan projects have specific agency-submitted cost estimates, totaling about \$190 million of the \$530 million. About \$110 million of the \$190 million is for projects included in the CLRP. For the remaining 65% of draft plan listings project-specific cost estimates were not available. Total estimated cost for projects without an agency-submitted estimate was imputed on a mileage and project type basis at about \$340 million of the \$530 million. Cost estimates should be considered as order-of-magnitude and in most cases do not reflect engineering-level estimates.

On-Line Resources

Development of the *Bicycle and Pedestrian Plan for the National Capital Region* has benefited from an on-line plan project database, a resource separate from the printed document. For the first time, Bicycle and Pedestrian Subcommittee members were able to view, enter, and edit their project listings on-line. This on-line database will facilitate keeping the regional list accurate and up-to-date, and will facilitate integration of information from this plan into the region's *Constrained Long-Range Plan* and Transportation Improvement Program as necessary. An on-line version of this plan also will be maintained for public access on the TPB's Web site at <http://www.mwcog.org>, under transportation/planning activities/bicycle and pedestrian planning.

Outlook

Overall, the TPB's *Vision* calls for convenient, safe bicycle and pedestrian access, walkability in regional activity centers and the urban core, reduced reliance on the automobile, increased walking and bicycling overall, inclusion of bicycle and pedestrian facilities in new transportation projects and improvements, and implementation of a regional bicycle and pedestrian plan. The *Bicycle and Pedestrian Plan for the National Capital Region* provides a blueprint for making the region a better place for bicycling and walking.

Introduction

**Bicycling, Walking and the Vision
of the Transportation Planning Board**

The National Capital Region Transportation Planning Board has long recognized the benefits of bicycling and walking in the region’s multi-modal transportation system. The Transportation Planning Board’s *Transportation Vision for the 21st Century*, adopted in 1998, emphasizes bicycles and pedestrians in its goals, objectives and strategies. A key part of the *Vision* is a strong urban core and a set of regional activity centers, which will provide for mixed uses in a walkable environment and reduced reliance on the automobile. The *Vision* also calls for the implementation of a regional bicycle and pedestrian plan. Recommendations in this plan will help realize the *Vision*.

**Bicycling and Walking in the National
Capital Region**

The Washington region is nationally known for the quality, beauty, and extent of its bicycle paths. Its walkable core neighborhoods attract residents and visitors alike. The region has a strong foundation of walking and bicycling facilities to build upon.¹

*The Urban Core has a
Growing Network of Bicycle
Lanes*

*Walking and
Bicycling
account for 8.3%
of all trips in the
region*

Taken together, bicycling and walking is a significant mode of transportation in the Washington region. According to the Metropolitan Washington Council of Governments’ 1999 Household Travel Survey there are roughly 1.1 million pedestrian trips per day in the region, which is 7.8% of all trips. There are roughly 76,000 bicycle trips per day in the region, which is one-half of one percent of the almost 14 million daily trips for all modes of transportation.

Recent years have seen progress for bicyclists and pedestrians. Several major new trails have opened, and most local governments have adopted bicycle, pedestrian, and/or trail plans. The Washington Metropolitan Area Transit Authority has

¹ DC Bicycle Lane Photo: COG/TPB /Michael Farrell

eliminated the requirement for bike-on-rail permits, expanded bicycle boarding hours, and added bike racks to its buses. Bicycle or pedestrian coordinators and trail planners are now found at most levels of government. In accordance with federal guidance and new state policies, pedestrian and bicycle facilities are increasingly being provided as part of larger transportation projects. Employers are investing in bike facilities at work sites, and developers are including paths in new construction.²

*The Capital Crescent Trail
Bridge over Rock Creek,
Chevy Chase, MD opened
in 2003*

riders and carpoolers travel more than five miles to the transit or carpool location⁵

The potential for shifting non-work trips to bicycling or walking is probably even greater than for work trips. The average non-work trip is a little more than five miles, and nearly 3/4 of all trips are non-work trips.⁶ Destinations such as schools, shopping, and recreational facilities are often close enough to walk or bicycle. Bicycling and walking have considerable potential to displace automobile trips if suitable transportation, design, safety, parking, school siting, and land development policies are followed.

Bicycling and walking could reach a greater potential in the Washington region, however. Many trips currently taken by automobile could potentially be taken by bicycle. The average work trip length for all modes in the Washington Metropolitan Statistical Area is 16.2 miles.³ But 17% of commute trips are less than five miles, a distance most people can cover by bicycle.

Many people who live far from their jobs, but closer to transit or a carpool location could walk or bike to transit or the carpool instead of driving. The average trip distance to transit or carpool is only 3.1 miles.⁴ Only 15% of transit

Plan Development and Organization

This plan has been prepared by the National Capital Region Transportation Planning Board, the federally designated Metropolitan Planning Organization (MPO) for the Washington region. The TPB is made up of representatives of 20 local governments, the departments of transportation of Maryland, Virginia, and the District of Columbia, the state legislatures, and the Washington Metropolitan Area Transit Authority (WMATA). Member jurisdictions are shown in Figure i-1 on page i-4. The area of the TPB members plus Calvert County in Maryland and Stafford County in Virginia comprises the Washington, DC-MD-VA Metropolitan Statistical Area (MSA).

This document presents the long-range Bicycle and Pedestrian Plan for the Washington Region through the year 2030. The plan is a list of regional projects identified by the TPB member jurisdictions, accompanied by recommended best practices and a description of existing facilities and regional trends for bicycling and walking. This plan includes both funded and unfunded projects. It does not specify design guidelines, but refers instead to state and national guidelines for bicycle and pedestrian facilities.

This update of the *Bicycle and Pedestrian Plan for the National Capital Region* seeks to reflect the goals, objectives and strategies of the 1998 *TPB Vision* while building on information from previous bicycle plans.

This update also fully incorporates pedestrian issues for the first time. Pedestrian planning is most needed at the county, city and neighborhood level. There is, however, a role for regional pedestrian planning. By recommending policies and keeping track of regional trends, we can help make the Washington area a better place to walk.⁷

Chapter 1
Planning Context

Overview

This *Bicycle and Pedestrian Plan for the National Capital Region* draws on and has been shaped by a number of regional, state, and local policy statements, plans, and studies, including the Vision of the Transportation Planning Board, the TCSP (Transportation and Community and System Preservation) reports, federal and state guidance on provision of bicycle and pedestrian facilities, the Constrained Long Range Plan and Transportation Improvement Program, and state and local bicycle and pedestrian plans.

The Vision of the Transportation Planning Board

The National Capital Region Transportation Planning Board is the Metropolitan Planning Organization for the Washington region. It brings key decision-makers together to coordinate planning and funding for the region’s transportation system.

The TPB’s official vision statement for the region, the *Transportation Vision for the 21st Century*, adopted in 1998, is meant to guide regional transportation investments into the new century. The *Vision* is not a plan with a map or specific lists of projects. It lays out eight broad goals, with associated objectives and strategies that will help the region reach its goals.

*The Vision of the
TPB calls for
more Walking
and Biking*

The *Vision* is supportive of pedestrians and bicyclists. It calls for:

- Convenient, safe bicycle and pedestrian access
- Walkable regional activity centers and urban core
- Reduced reliance on the automobile
- Increased walk and bike mode share
- Including bicycle and pedestrian facilities in new transportation projects and improvements
- Implementation of a regional bicycle and pedestrian plan

Sections of the *Vision* relating to bicycle and pedestrian goals are highlighted in Table 1-1. The full text of the *Vision* is available at www.mwcog.org/transportation.

This plan is intended to help fulfill the goals of the *TPB Vision* for Bicyclists and Pedestrians; recommendations in this plan reflect the goals of the *Vision*.

In addition to the specific references in Table 1-1, many other aspects of the *Vision* address bicyclists and pedestrians, such as: maintaining the existing transportation system, reducing the per capita vehicle miles traveled, linking land use and transportation planning, and achieving enhanced funding for transportation priorities.

**Table 1-1:
Bicycle and Pedestrian Provisions of the Transportation Vision**

Goal 1. The Washington metropolitan region's transportation system will provide reasonable access at reasonable cost to everyone in the region.

Objective 4: Convenient **bicycle and pedestrian** access.

Strategy 3: Make the region's transportation facilities safer, more accessible and less intimidating for **pedestrians, bicyclists**, and persons with special needs.

Goal 2. The Washington metropolitan region will develop, implement, and maintain an interconnected transportation system that enhances quality of life and promotes a strong and growing economy through the entire region, including a healthy regional core and dynamic region activity center with a mix of jobs, housing, and services in a walkable environment.

Objective 2: Economically strong regional activity centers with a mix of jobs, housing, services, and recreation **in a walkable environment.**

Objective 4: Improved internal mobility with reduced **reliance on the automobile** within the regional core and within regional activity centers.

Goal 5. The Washington metropolitan region will plan and develop a transportation system that enhances and protects the region's natural environmental quality, cultural and historic resources, and communities.

Objective 3: Increased transit, ridesharing, **bicycling and walking** mode shares.

Strategy 7: Implement a regional **bicycle/trail/pedestrian plan** and include **bicycle and pedestrian facilities** in new transportation projects and improvements.

Accompanying the *Vision* is a shorter action agenda with elements to be included in the year 2000 long range transportation plan for the region. Item four on the action agenda calls for a regional congestion management system to achieve significant reduction in single occupant vehicles (SOVs) entering the regional core and regional activity centers by:

- designing and developing circulation systems that maximize the use of transit (rail, monorail, bus, jitney, etc.) and **pedestrian and bicycle** facilities

**Encouraging Bicycling and Walking:
Bike to Work Day, the Bike to Work Guide, and Guaranteed Ride Home**

To help realize the *TPB Vision* and reduce congestion, air pollution, and single occupant vehicle traffic, the TPB has developed several programs to encourage bicycling and walking in the Washington region. As part of its Commuter Connections program, every year on the third Friday in May the TPB sponsors a regional Bike to Work Day. This event has grown into one of the largest of its kind in the country, attracting over six thousand riders to more than twenty “pit stops” or rallying points around the region. The event is meant to encourage first-time riders to try bicycling to work.

The Commuter Connections program also supports publication of *Biking to Work in the Washington Area: A Guide for Employers and A Guide for Employees*, which provides tips for employees and employers. For employees, there are tips on safe cycling, laws, equipment and clothing, and transit connections. For employers, the guide explains the benefits of bicycling to the employer, the types of bicycle parking, and the ways an employer can encourage an employee to bike to work. Commuter Connections also makes available on-line a regional map of existing bicycle facilities, park and ride lots with bicycle parking, transit, and HOV lanes.¹ The Bicycle and Pedestrian Subcommittee also publishes a map of regional bicycle facilities in cooperation with the ADC Map Company. Maps can be ordered at www.adcmap.com.

People sometimes drive to work because they need to be able to get home quickly in an emergency. To meet that need and help get more people out of their cars, the Commuter Connections program offers a free taxi ride home in an emergency for commuters who regularly (twice a week) carpool, vanpool, bike, walk or take transit to work. Commuters who sign up for the Guaranteed Ride Home program may use it up to four times per year.

Priorities 2000: Metropolitan Washington Greenways and Circulation Systems

*The Greenways
and Circulation
Systems Reports
identify specific
projects that
support the TPB
Vision*

In 1999 the TPB undertook the preparation of two reports: *Priorities 2000: Metropolitan Washington Greenways*, and *Priorities 2000: Metropolitan Washington Circulation Systems*². The reports were funded by the Federal Highway Administration under the Transportation and Community and System Preservation (TCSP) Pilot Program. The grant was intended to support two key components of the TPB vision: improving circulation within the regional core and regional activity centers, and integrating greenspace into a regional greenways system. The *Greenways Report* supports the greenways and trails component of the TPB vision, while the *Circulation Systems Report* supports the goal of improving circulation, especially non-motorized circulation, within the

¹ The Bike to Work Guide is available at www.mwcog.org/commuter/ccindex.html

² Both reports can be downloaded under “Information and Publications” at www.mwcog.org

urban core and the regional activity centers. The two *Priorities 2000* reports provided key input to this bicycle and pedestrian plan.

The *Greenways Report* identified eight regional priority trail projects, and twelve local projects, as well as nine major existing greenways. Projects were selected as regional priorities based on five criteria:

- Potential inter-jurisdictional connection
- Fill a critical gap
- Provide ecological benefits
- Links to existing or planned greenway
- Provide community access to the regional greenway network

The *Greenways Report* also provides detailed strategies for identifying, planning, implementing, and managing greenways projects.³

Regional priority projects, local priority projects, and selected existing greenways from the *Greenways Report* are shown in Appendix M. Several of these greenways have been completed since this report was published, while others have been advanced significantly.

Priorities 2000: Circulation Systems

The *Circulation Systems Report* focused on local circulation systems within the regional core and within regional activity centers. Places such as Tyson's Corner have grown to urban densities while relying almost entirely on the automobile for internal mobility, leading to worsening congestion. There is tremendous interest in improving internal pedestrian, bicycle, and transit mobility in such centers.

The *Circulation Systems Report* identified candidate and priority projects for improving internal circulation. Out of 51 candidate projects identified, 34 were pedestrian or bicycle projects. Projects were selected as regional priorities using the following criteria:

- location in a regional activity center
- readiness for implementation
- included in a local plan

³ C&O Towpath Photo: COG/TPB, Michael Farrell

- safety
- air quality
- economic development
- households served
- employees served
- cost

The following projects were selected as regional priorities:

1. Downtown DC Circulator
2. New York Avenue Metro Station Access
3. Union Station Bike Station
4. Montgomery County CBD Shuttle Package
5. Rockville Town Center
6. Suitland Metro Area Bus and Pedestrian Improvements
7. Old Town Fairfax Redevelopment
8. Rosslyn Circle Crossing
9. Tyson’s Corner Pedestrian Improvements

Of the nine regional priority circulation projects, seven are wholly or partially pedestrian or bicycle projects.

The *Greenways and Circulation Systems Reports* continue to serve as a resource for planners in the Washington region. They also represent the most recent statement of regional bicycle and pedestrian priorities, and a majority of the projects chosen as priorities have either been implemented or have been advanced significantly since the TCSP reports were issued. The TCSP selection criteria for regional priority have been incorporated into the information in the regional bicycle and pedestrian database.

Federal and State Policies

Virginia now requires “routine accommodation” of pedestrians and bicyclists in transportation projects

U.S. Department of Transportation guidance issued in 2000 calls for bicycling and walking facilities to be incorporated into all transportation projects unless exceptional circumstances exist. In 2004, the Virginia Department of Transportation released its policy for bicycle and pedestrian accommodation, which commits VDOT to routinely accommodating pedestrians and bicyclists as part of all new construction and reconstruction projects, unless exceptional circumstances exist.⁴ The State of Maryland’s Bicycle and Pedestrian Access Act provides that “Access to and use of transportation facilities by pedestrians and bicycle riders shall be considered in all phases of transportation planning,

⁴ www.virginiadot.org

including highway design, construction, reconstruction, and repair.”⁵ The Maryland Department of Transportation is to “work to ensure” that transportation options for pedestrians and bicycle riders will be enhanced and not negatively impacted by a project or improvement.

Routine accommodation policies are sometimes known as “complete streets” policies.⁶ “Complete streets” are defined as streets that are designed and operated to enable safe access for all users, including motorists, pedestrians, bicyclists, and transit users, as well as senior citizens, children, and persons with disabilities. Oregon, Virginia, South Carolina, and a number of other regions and cities have adopted such policies.

Federal and State policies have evolved, from not requiring (or in some cases prohibiting) the use of transportation funds for pedestrian or bicycle facilities, towards requiring the provision of such facilities. These new federal and state guidelines and policies will likely lead to an increase in the number of pedestrian and bicycle facilities provided, with more facilities provided as part of larger transportation projects rather than as stand-alone projects.

Americans with Disabilities Act

The Americans with Disabilities Act (ADA) is a federal civil rights statute that prohibits discrimination against people who have disabilities. Under the ADA, designing and constructing facilities that are not usable by people with disabilities constitutes discrimination. Public rights of way, including pedestrian facilities, are required by federal law to be accessible to people with disabilities.

*The ADA Requires
that all New and
Altered Pedestrian
Facilities be made
Accessible to the
Handicapped*

Both new and altered pedestrian facilities must be made accessible to persons with disabilities, including those who are blind or visually impaired. The courts have held that if a street is to be altered to make it more usable by the general public, it must also be made more usable for those with disabilities.

Government facilities which were in existence prior to the effective dates of the ADA and which have not been altered are not required to be in full compliance with facility standards developed for new construction and alterations. However, they must achieve 'program access.' That is, the program must, when viewed in its entirety, not deny people with disabilities access to government programs and services. For example, curb ramps may not be required at every existing walkway if a basic level of access to the pedestrian network can be achieved by other means, e.g., the use of a slightly longer route. Municipalities should develop plans for the

⁵ Maryland Department of Transportation, *Twenty Year Bicycle and Pedestrian Access Master Plan*, October, 2002. p. 32.

⁶ www.completestreets.org

installation of curb ramps and accessible signals such that pedestrian routes are, when viewed in their entirety, accessible to people who are blind or visually impaired within reasonable travel time limits.⁷

Design standards for the disabled, such as smoother surfaces, adequate width, and limits on cross-slope, are also beneficial for the non-disabled pedestrian. Good design for persons with disabilities is good design for all.

SAFETEA-LU

Under the SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: Legacy for Users) federal transportation bill signed in August 2005, bicycle and pedestrian projects remain broadly eligible for nearly all funding categories, either for projects incorporated into something larger, or for stand-alone bicycle and pedestrian projects. The bill authorizes \$286 billion for highways and transit from 2005 through 2009, a 22% increase over the previous federal transportation bill, TEA-21.

Transportation Enhancements, half of which historically have been spent on bicycle or pedestrian projects, are funded nationally at a level of \$3.25 billion over five years. The Recreational Trails Program sets aside \$110 million for non-motorized trails. SAFETEA-LU also contains a number of high priority projects, sometimes known as legislative earmarks, many of which are bicycle or pedestrian projects.⁸ Pedestrian and bicycle projects are *not*, however, limited to set-aside programs and high priority projects. They are broadly eligible for funding from highway and transit funds.

Safe Routes to School

Aside from the general increase in funding under SAFETEA-LU, the most important new set-aside for bicyclists and pedestrians is the Safe Routes to School (SRTS) Program. The goals of the program are to enable and encourage children to walk and bike to school, improve safety, and reduce traffic and air pollution near schools. Eligible activities include both infrastructure and non-infrastructure projects. Infrastructure projects include bicycle parking, crosswalks, sidewalks, traffic calming, on and off-street bicycle facilities, etc. on any public road or trail in the vicinity of a school. Non-infrastructure projects include public awareness and outreach to encourage walking and bicycling to school, traffic education and enforcement near schools, student sessions, training, SRTS program managers, and a State Coordinator. Not less than 10% or more than 30% of SRTS funds must be set aside for non-infrastructure projects.

⁷ American Council for the Blind, *Pedestrian Safety Handbook: A Handbook for Advocates*. www.acb.org

⁸ See www.bikeleague.org for further information on the Bicycle and Pedestrian provisions of SAFETEA-LU.

Funds will be administered by State Departments of Transportation, with 100% federal share – no local match required. Each state is to receive funds in proportion to K-8 school enrollment, but not less than \$1 million. The budget will grow from \$54 million in 2005 to \$183 million in 2009.

Constrained Long-Range Plan

The financially Constrained Long-Range Transportation Plan (CLRP) is a comprehensive plan of transportation projects and strategies that the TPB realistically anticipates can be implemented over the next 25 years. The region's transportation agencies and jurisdictions submit projects for the CLRP, which is developed and approved by the TPB. The CLRP is the primary vehicle for realizing the *TPB Vision* and the States' long-range plans. Federal law requires that the CLRP be updated every four years; the most recent version was adopted in 2004. To receive federal funding, a transportation project in metropolitan Washington must be included in the CLRP. Because funds must be reasonably anticipated to be available for all the projects in the CLRP, the CLRP is realistic plan based upon available resources.

The CLRP identifies a few important bicycle projects, as well as discussing the actions of the Bicycle and Pedestrian Subcommittee to promote pedestrian and bicycle safety, walkable communities, and better professional development and training. Training in the requirements of the Americans with Disabilities Act with respect to pedestrian facilities has been a major emphasis.

Bicycle and pedestrian projects in the 2005 CLRP are listed in Appendix C. Historically, less than 1% of the capital funding in the CLRP has been specifically for stand-alone bicycle and pedestrian projects. However, since bicycle and pedestrian projects are usually small projects, they are often added to the plan later than the major highway and transit projects. Moreover, much pedestrian and bicycle spending is subsumed within larger highway or transit projects, and thus is not reflected in the amount programmed for bicycle and pedestrian projects. Therefore, the CLRP may under-estimate the amount of bicycle and pedestrian spending that will occur over the next 25 years. State Departments of Transportation may also increase funding levels in the future as they implement policies to routinely accommodate pedestrians and bicyclists in all new transportation projects.

Under SAFETEA-LU bicyclists, pedestrians, and people with disabilities are explicitly required to be given an opportunity to comment on metropolitan transportation plans.

Transportation Improvement Program

The Transportation Improvement Program (TIP) provides detailed information showing which projects in the CLRP will be completed over the next six-year period. The TIP is updated every year. Like

*The Transportation
Improvement
Program includes
\$122 million for
pedestrian and
bicycle projects*

the CLRP, the TIP is subject to federal review. Many projects in the TIP are staged, so a single CLRP project could end being split into multiple TIP projects.

Bicycle and pedestrian projects that use federal funds are listed in the TIP. For example, the Fiscal Year 2006-2011 TIP includes \$122 million for bicycle and pedestrian projects. Of that, \$69 million is programmed for FY 2006, which is 2.4 % of the total capital funds for all transportation projects programmed for FY 2006. As with the CLRP, funds spent on bicycle and pedestrian accommodations as part of a larger highway or transit project are often subsumed in budget of the larger project.

Local Bicycle and Pedestrian Planning

Nearly every jurisdiction in the region has completed a bicycle or pedestrian plan, and most have at least part time bicycle or pedestrian planner. Table 1-2 shows local and state plans and studies and the year published. Jurisdictions and agencies drew projects from these individual plans and submitted them for incorporation into the Regional Bicycle and Pedestrian Plan. Local plans may include unfunded projects.

Priority Unfunded Regional Bicycle and Pedestrian Projects

The Bicycle and Pedestrian Subcommittee periodically selects a short list of priority unfunded bicycle and pedestrian projects. These projects are selected from the TCSP reports, the regional

bicycle plan, and from state and local plans. The subcommittee has compiled and forwarded lists to TPB regularly since 1995, to be included in the solicitation document for the TIP/CLRP. In essence, the TPB urges the jurisdictions to consider funding these projects, which the Bicycle and Pedestrian Subcommittee has judged to be regionally significant, within six years.

The selection criteria for inclusion in this short list were drawn from those used in the TCSP *Greenways and Circulation Systems Reports*. The following criteria were used:

- **Bicycle Network Connectivity:** priority was given to projects that enhanced connectivity of facilities on the regional bicycle facilities network.
- **Pedestrian Safety:** priority was given to projects that promoted pedestrian safety, especially in areas with documented pedestrian safety problems and no pending road project that could address them.
- **Access to Transit:** priority was given to projects that enhanced access to Metrorail stations and other major transit stops or facilities.
- **Time Frame:** all projects should be able to be completed by 2011, the end of the TIP time frame.
- **Local Support:** the project is a priority for the jurisdiction or jurisdictions in which it is located.
- **Still seeking funding:** the project does not yet have full construction funding committed to it.
- **Reasonable Cost:** the total cost of the list should be a reasonable fraction of the total spending in the region on highways and bridges.

While considerable weight is given to the preference of the representative of the jurisdiction, subcommittee members are urged to think in terms of the regional selection criteria when nominating projects.

Projects are dropped from the list when they receive funding, or if the subcommittee and nominating jurisdiction decide that priorities have changed. Most projects on past lists have been funded. Seven projects totaling \$11,508,000 were funded from the 2000 list, and five projects from the 2002 list were fully or partially funded. Projects funded since 1995 include:

- The Metropolitan Branch Trail in Washington, D.C.
- Pedestrian and Bicycle Safety Improvements on Route 1 in Fairfax County
- The Dumfries Road (Route 234) Bike Path in Prince William County
- The Rosslyn Circle Crossing in Arlington County
- The Eisenhower Trail in Alexandria
- The Matthew Henson Trail in Montgomery County
- The Henson Creek Trail in Prince George's County
- The Millennium Trail in the Rockville

Regional Bicycle Plans

The Washington region completed its first major bicycle study, the *Washington Regional Bikeways Study* in 1977. This study, created under the supervision of the Regional Bikeways Technical Subcommittee of the Transportation Planning Board Technical Committee, provided an overview of bicycling characteristics and the potential market for bicycle commuting.

In 1988 the Bicycle Technical Subcommittee began work on a bicycle element for incorporation into the region's transportation plan. The plan identified the extent to which bicycle facilities and planning processes already existed in the region, highlighted areas of concern for the future, and drafted a set of policy principles to be applied by the region's jurisdictions in updating their own transportation plans, as well as a list of recommended bicycle projects. The *Bicycle Element* was adopted by the Transportation Planning Board as part of the region's Constrained Long-Range Plan in November 1991.

In 1995, the Transportation Planning Board adopted an update to the 1991 *Bicycle Element*, the Bicycle Plan for the National Capital Region, as an amendment to the Constrained Long-Range Plan. The revised plan emphasized bicycling for transportation and recommended project lists and policy principles produced by the Bicycle Technical Subcommittee.

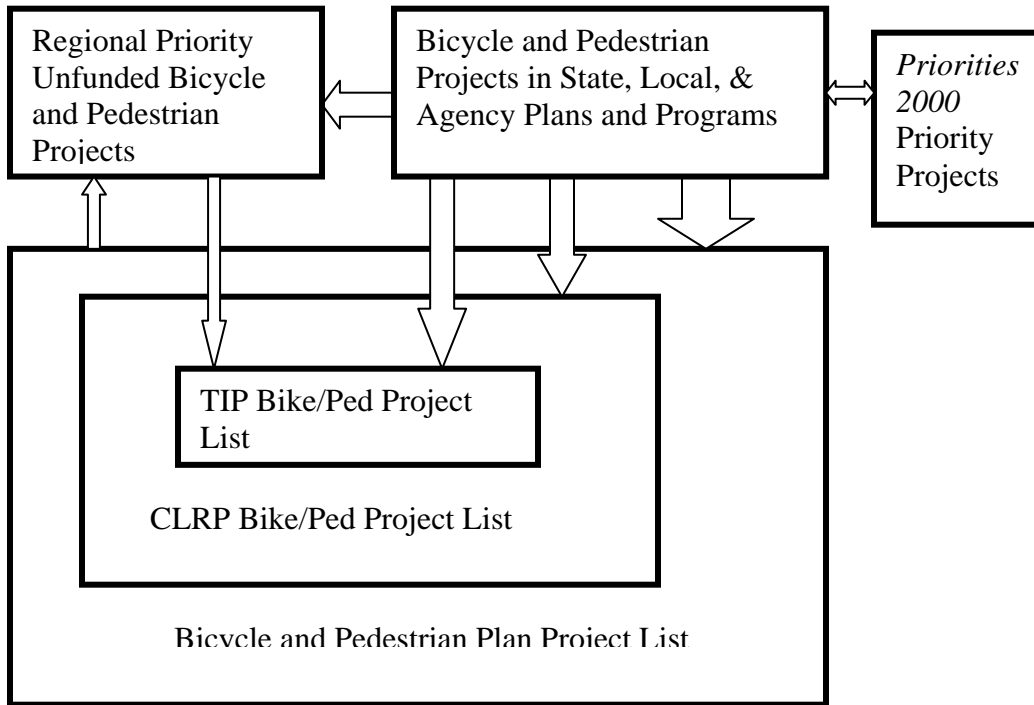

In February 2001, the TPB completed the *Priorities 2000: Greenways and Circulation Systems* reports, which identified greenway and pedestrian circulation systems priorities.

Except for the *Priorities 2000* reports, predecessors to this plan were "bicycle" plans. This update to the previous plans fully incorporates pedestrian elements for the first time.

Sources of the Regional Plan Projects

State, local, and agency bicycle and pedestrian plans are the source of the projects in this plan. All bicycle and pedestrian projects that are programmed in the TIP are also in the CLRP and in this plan. The plan, however, includes many projects that are not in the TIP or the CLRP. The selection criteria from the Transportation Planning Board's *Priorities 2000: Circulations Systems* and *Greenways* reports helped determine the data included for each project in the bicycle and pedestrian plan project list. Figure 1-1 illustrates the relationships between the various project lists.

Figure 1-1

Outlook

The TPB has a continuing commitment to inclusion of both bicycle and pedestrian elements in long-range transportation plans. Bicycle and pedestrian plan elements in the regional plans are drawn from jurisdictional plans and policies. The regional Bicycle and Pedestrian Plan in turn will advise the choices made by TPB member agencies for the inclusion of bicycle and pedestrian projects in future Constrained Long Range Plans and Transportation Improvement Programs.

Chapter 2

Bicycling and Walking in the Washington Region

Overview

Residents of the Washington region walk and bicycle at about the same rate as the nation as a whole. Tables 2-1 and 2-2 show the share of walking and bicycling trips to work for the ten largest metropolitan areas.

Nationally, 10% of all urban area trips are made on foot or by bike

Walking and bicycling are declining as modes of transportation both in the Washington region and nationally. Nationally, 0.38% of American workers bicycled to work in 2000, and 2.93% walked. In 1990 0.4% bicycled to work, and 3.9% walked. The number of people driving alone

rose from 73.2% in 1990 to 75.7% in 2000, while use of public transportation fell by 0.5%. Driving has been growing, and walking and public transportation declining, for many decades. In 1960, 9.9% of workers walked to work, but only 2.93% did so in 2000.²

The walk and bike modes are more common, though, than the census commute mode numbers would lead one to believe. Work trips account for only 20% of all trips; walking and biking are more common for other purposes. Nationally, 9.5% of all urban area trips were made on foot, and 0.9% by bicycle in 2001. In the Mid-Atlantic region, 15.8% of all trips are made on foot, and 0.8% by bicycle.³

Regionally, bicycling and walking are concentrated in the core neighborhoods of the Washington region, especially areas near downtown D.C. and certain Metro stations, as well as college campuses and military bases. Figures on walking remain stable in those neighborhoods, while bicycling numbers are growing.

Table 2-1 Pedestrian Commuting in the Ten Largest Metropolitan Areas ¹		% Walk to Work
1	New York	5.55%
2	Boston	4.12%
3	Philadelphia	3.88%

1 2000 US Census

2 1960 Census of Population, Characteristics of Population, United States Summary

3 Pucher, John, "Socioeconomics of Urban Travel: Evidence from the 2001 NHTS". *Transportation Quarterly*, Vol. 57, No. 3, Summer 2003 (49-77). Page 54.

Ethnicity, geography, age, and car ownership affect the decision to walk or bicycle to work. People living in the District of Columbia are far more likely to walk or bicycle to work than those living in Maryland or Virginia. People under the age of 35 or over the age of 65 are more likely to walk or bicycle to work. People living in households without cars are more likely to walk or bicycle than those that have one, and those living in households with only one car are more likely to walk or bicycle than those owning two. Middle-income groups are slightly less likely to walk or bicycle than either low-income or the high-income groups. Hispanics are most likely to walk or bike to work.

Distance is a major barrier to commuter cycling, along with absence of safe routes, and lack of end-of-trip facilities such as showers and lockers.⁴ However, most commute trips that are short enough to be bikable or walkable are still taken by car. The average trip distance to transit or carpool is very short.

Transit and walking are interdependent, with 80% of bus and 60% of Metrorail access trips on foot. Mode of access varies tremendously by Metro station. Bicycling to transit is less common and varies greatly by Metro station, with the lowest rates of bicycle access found east of the Anacostia river.

Walking and bicycling are most common in activity centers with a mix of jobs, housing, services, and recreation in a walkable environment.

Jurisdictional Trends according to the US Census

The national trend towards less walking and bicycling also holds for the Washington Metropolitan Statistical Area. In 1990, 6,633 people (0.3 %) biked to work on an average day in the Washington area and 85,292 (3.9 %) walked. In 2000, 7,532 people (0.3%) biked to work and 72,700 (3.1%) walked. It should be noted that the census numbers tend to undercount pedestrian trips, since a walk trip to transit is counted as a transit trip, not as a walk trip. Charts 2-1 and 2-2 below show the changes in walking and biking to work by jurisdiction.

⁴ Metropolitan Washington Council of Governments, *2004 Bike to Work Day Survey- Summary of Results*, June, 2005. Page 6.

Chart 2-1: Percentage of Workers Walking to Work

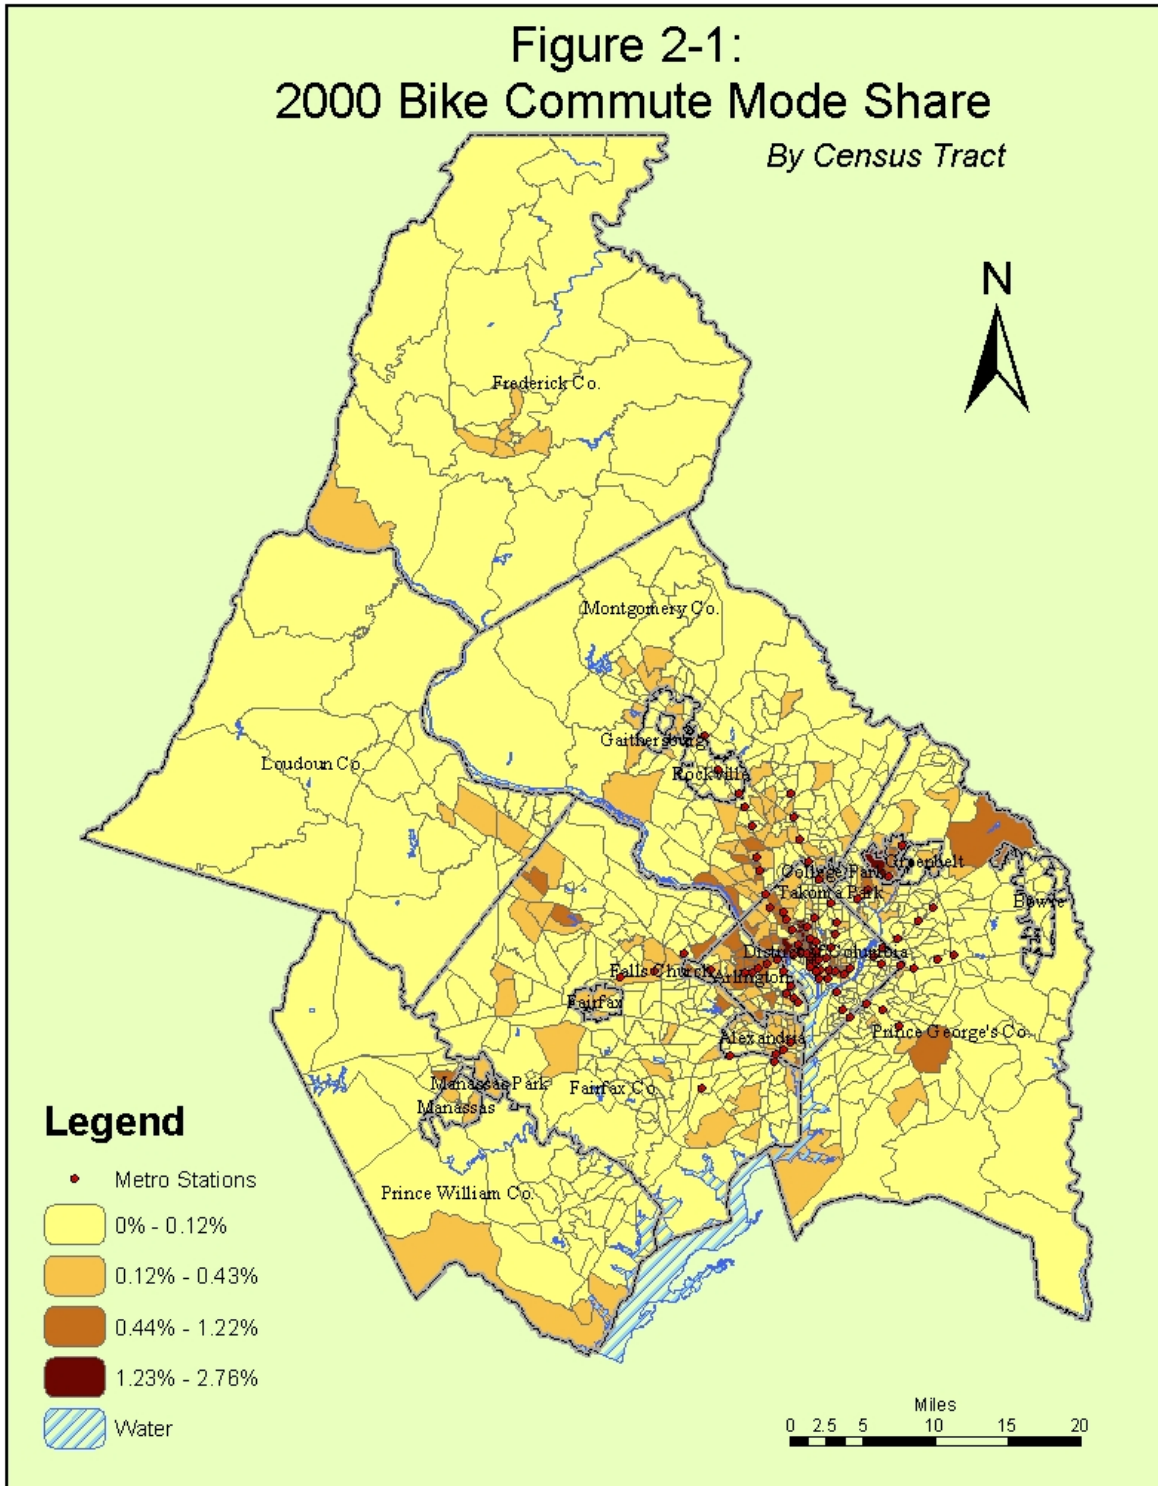

Chart 2-2: Percentage of Workers Biking to Work

Generally, the urban core of the Washington region, consisting of the District of Columbia, Arlington, and Alexandria, has experienced modest losses in pedestrian mode share and considerable gains in bicycling. The District of Columbia has maintained its pedestrian mode share for the journey to work, while increasing its bicycle mode share considerably. The outer suburban jurisdictions had relatively few people bicycling or walking to work in 1990, and that number fell further during the decade that followed.

Mode Share by Census Tract

Figure 2-1 shows the percentage of home-based work trips by bicycle for each census tract within the TPB member jurisdictions. Figure 2-3 shows the percentage of home-based work trips by foot. Figures 2-2 and 2-4 show bicycle and walk work trips respectively for the area served by Metrorail. The maps show that bicycling and walking are concentrated in the neighborhoods surrounding downtown D.C., Capitol Hill, and North Arlington. The neighborhoods closest to downtown show the highest walk mode shares, while those a little further out have the highest bike mode shares. Census tracts abutting major facilities such as the W&OD, the C&O, and the Mt. Vernon Trails tend to show higher levels of bicycling. College campuses and military bases such as University of Maryland, Ft. Meyers, Bolling Air Force Base, the National Institute of Health, Walter Reed, Howard, Georgetown and Gallaudet all have high walk or bike mode share.

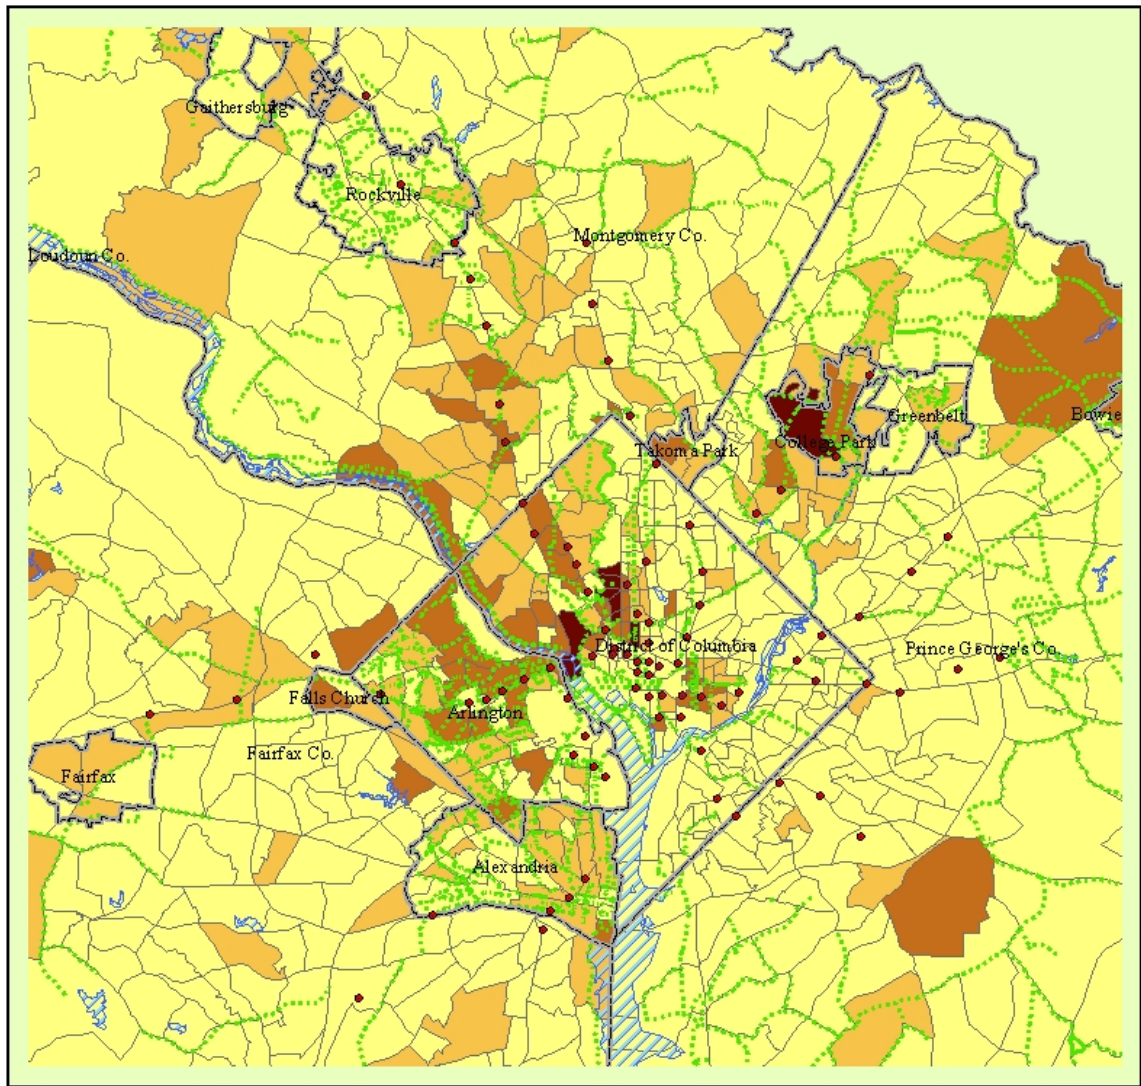

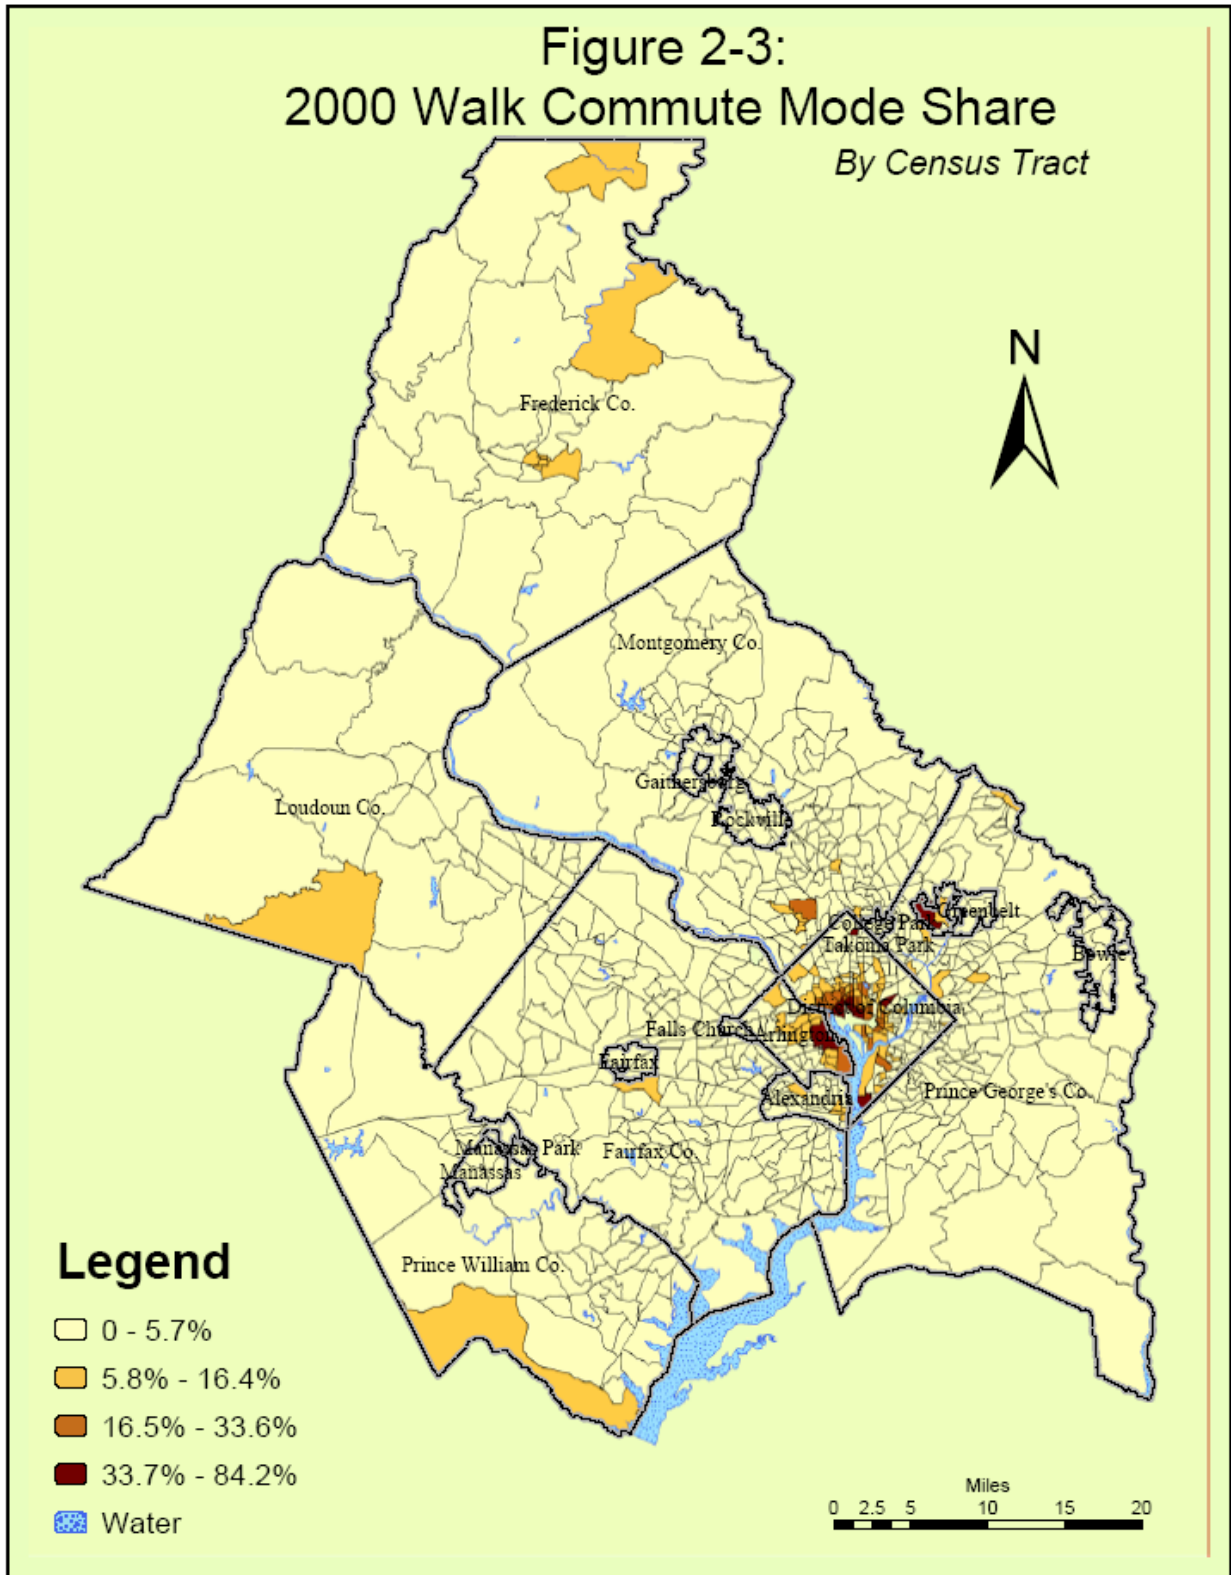

Figure 2-2:
2000 Bike Commute Mode Share
By Census Tract

Figure 2-4:
2000 Walk Commute Mode Share
By Census Tract

Bicycling in the Metro Core

COG/TPB periodically takes a count of vehicular traffic, including bicycle traffic but excluding pedestrian traffic, entering downtown D.C. and Arlington, as well as traffic crossing the beltway.

Cordon counts are not done in other parts of the region. COG/TPB's cordon counts confirm the census data indicating a concentration of bicycling in the neighborhoods close to downtown D.C. and Arlington.

*Bicycling is
Growing
Rapidly in
Downtown D.C.
and North
Arlington*

The counts show that bicycle traffic into the downtown Metro core is growing rapidly, with bicycle traffic into the D.C. section of the Metro core more than doubling from 1986 to 2002. The number of bicyclists entering the Metro core within the District of Columbia has grown steadily from 474 in 1986 to 1,379 in 2002. The number of cyclists crossing the Potomac bridges grew from 317 in 1986 to 525 in 2002. Bicycle traffic into the Arlington section of the Metro core increased from 409 to 645 bicyclists

between 1999 and 2002, while Potomac bridge traffic declined slightly over the same period, indicating that more people are bicycling to destinations, probably employment, within Arlington in the morning. Chart 2-3 shows the number of bicycles entering the D.C. section of the Metro core from 1986 to 2002.

Chart 2-3:
Bicycles Entering D.C. Section of the Metro Core

Bicycle traffic is also counted on the beltway cordon, including traffic on shared-use paths, but the a.m. volumes recorded are a fraction of the numbers entering the Metro core. Table 2-4 in Appendix F shows the bicycle volumes recorded crossing the beltway in 1995, 1998, and 2001.

Demographic Characteristics of Pedestrians and Bicyclists

Ethnicity, geography, income, age, and car ownership affect the decision to walk or bicycle to work. The best recent source of this demographic information on pedestrian and bicycle commuters in the Washington region is the 2004 Commuter Connections *State of the Commute Survey*. However, the *State of the Commute Survey* and the US Census both measure work trips only, and the conclusions in terms of both the prevalence and distribution of walking and bicycling can be quite different for all trips than for work trips. Nationally, the 2001 *National Household Personal Transportation Survey* is the best source of demographic data on pedestrians and bicyclists for all types of trips.

All data in the following tables comes from the 2004 *State of the Commute Survey* unless otherwise noted. Walking and bicycling were not calculated separately in the *State of the Commute Survey* for the subcategories of ethnicity, income, age, and state of residence due to sample size issues. All mode shares are for primary commute mode, 3+ days per week. Walk/bike mode share varies by household income, state of residence, number of vehicles in the household, ethnicity, and age. Both the 2001 and the 2004 *State of the Commute Surveys* show lower mode share for walking and bicycling than does the 2000 Census, a discrepancy probably explained by differing methodologies.

A. Household Income

Chart 2-4 shows walking and bicycling commute mode share by income. Walking and bicycling to work are somewhat more prevalent among the low-income (less than \$30,000 household income per year) than among the very high-income (more than \$140,000 per year). Bicycling and walking are slightly more common at the top and the bottom of the income distribution than in the middle. This is roughly consistent with the national data for all trips.

Chart 2-4: Walk/Bike Commute Mode Share by Annual Household Income

B. Ethnicity

Walk/bike commute mode share differs more by ethnicity than by income. Hispanics have the highest walk/bike mode share at 3.8%, African-Americans the lowest at 1.5%.

Chart 2-5: Walk/Bike Commute Mode Share by Ethnicity

National data for all trips, however, show African-Americans and Hispanics both walking for about 12% of all trips, though African-Americans bicycle less. Whites walk less than any other ethnic group, but take 0.9% of their trips by bike, the same as Hispanics.⁵

C. Age

Chart 2-6 shows walk/bike commute mode share by age. People under 35 and over 65 are more likely to walk or bike to work than the middle-aged. Nationally the elderly have a lower than average mode share for bicycling, so we can presume that most of the elderly are walking rather than bicycling.

⁵ Ibid, p. 68.

Chart 2-6: Walk/Bike Commute Mode Share by Age

D. State of Residence

State of residence strongly predicts the likelihood of walking or bicycling to work, with 8.7% of District of Columbia residents walking or bicycling, versus 1.4% of Maryland residents and 1.5% of Virginia residents. District of Columbia residents are much less likely to own cars than Virginia or Maryland residents, are more likely to be low-income, and tend to live closer to transit or within walking distance of work.

E. Motor Vehicles per Household

Vehicles per household is another strong predictor, as shown in Table 2-5. People in households without any vehicles are much more likely to walk or bike to work than households that own one, while those living in households with one vehicle are more likely to walk or bicycle to work than those owning more than one vehicle. Non-work trips also shift radically away from walking in households that have at least one car.

**Table 2-5
Walk/Bike Mode Share by Number of Vehicles**

Number of Vehicles in the Household	0	1	2	3	4+
Walk/Bike Commute Mode Share	11.40%	3.70%	1.20%	1.40%	0.60%
Walk Mode Share – All Trips (NPTS) ⁶	41.1%	12.5%	7.8%	6.3% (3 or more)	
Bike Mode Share – All Trips (NPTS)	2.4%	0.7%	0.9%	0.8% (3 or more)	

Trip Distances

Distance was the third most frequently cited reason, by 31% of respondents, to COG/TPB’s Bike to Work Day survey to explain why they were *not* riding to work. Reasons One and Two were “Don’t like to ride in rain/cold/hot weather” (42%) and “No safe route” (35%). So trip distance is of great interest when gauging the potential for increasing bicycling (or walking). The 2004 SOC survey asked respondents about the length of their commutes. Commute mileage is shown in Table 2-6 below.

Table 2-6: Commute Distance

Distance	Less than 5 miles	5 to 9 miles	10 to 14 miles	15 to 19 miles	20+ miles
Percentage	17%	19%	18%	13%	34%

The mean commute distance in the Washington region is 16.2 miles. However, 17% of commutes in the Washington region are less than five miles and therefore potentially bikable on a daily basis. The median commute distance for Washington-area bicyclists is five miles. Table 2-7 shows walk and bike average and median commute distances in miles for pedestrians and bicyclists, from the 2004 *State of the Commute Survey* data.

Table 2-7: Walk and Bike Commute Distance (in Miles)

COMMUTE MODE	MEAN	MEDIAN	N
Walk	1.42	1.00	144
Bike	8.17	5.00	32

⁶ Ibid, p. 57.

Another major potential source of walk or bike trips is the trip to transit, park and ride lot, or vanpool and carpool pick-up point. As shown in Table 2-8, access trips to alternative mode meetings points tended to be short. Respondents traveled an average of 3.1 miles. The majority of respondents (59%) traveled one mile or less to the meeting point. Another 26% said they traveled between two and five miles. Only 15% of respondents traveled more than five miles. Based on the distances being traveled, many of the 29% of respondents who are currently driving to their alternative mode meeting point might be able to walk or bicycle instead.

Table 2-8
Distance Traveled from Home to Alternative Mode Meeting Point
(n=1,230)

Distance	Percentage
1 mile or less	59%
2 miles	10%
3 miles	7%
4 to 5 miles	9%
6 to 10 miles	10%
11 miles or more	5%

Table 2-9
Means of Getting from Home to Alternative Mode Meeting/Transfer Point
(n=1,577)

Access Mode to Alternative Mode	Percentage
Walk	39%
Picked up at home	15%
Drive to a central location (e.g., Park & Ride)	18%
Drive alone to driver's/passenger's home	11%
Bus/transit	9%
I am the carpool/vanpool driver	5%
Dropped off/another CP/VP	1%
Other*	1%

Non-Work Trips: The COG/TPB Household Travel Survey

In order to calibrate the regional travel demand model, the Council of Governments conducts periodic surveys of travel behavior, including trips for purposes other than work. The most recent surveys that include bicycle and pedestrian data were conducted in 1988, 1994 and in 1999.

These surveys use a much smaller sample of the region's residents than the Census. In 1994, 4,800 households were surveyed about their travel behavior (out of a metropolitan population of roughly 4 million). In 1999, only 2000 were sampled.

The advantage of the *Household Travel Survey* is that we learn about trips of all purposes, not just work trips. The Census and the *State of the Commute Survey* give us information about commute trips only. The disadvantage is that only the 1994 sample size was large enough to provide reliable information about bicycling and walking. Another household travel survey with a sample size comparable to the 1994 survey will be carried out in 2006-2007.

According to Chart 2-7 bicycle trips nearly doubled from 1988 to 1999. However, this increase coincides with an increase in population and employment in the region. In those 11 years the population increased an estimated 17% and the number of jobs increased 14%. Another important factor in the apparent increase is the difference in survey methodology between 1988 and 1994. A greater effort was made to gather bicycle and pedestrian trips in 1994 and 1999.

From 1994 to 1999 bicycle trips as a portion of total trips for all modes remained about the same: 0.5 % for all trip purposes and 0.7% for work trips.

**Chart 2-7: Estimated Bicycle Trips from the
COG Household Travel Survey
(thousands of trips/day)**

The number of pedestrian trips is higher than the number of bicycle trips. In the 1994 *Household Travel Survey*, we found that 7.8% of all trips were on foot, and that walking accounted for 3.1% of work trips. The 1988 *Household Travel Survey* only asked about work trips, and this data does not include walking to transit.

In 1994, three fourths of all trips in the Washington region were for purposes other than work, and those trips were relatively short trips, averaging between four and six miles in length.⁷ More than 80% of those non-work trips were auto trips, and another 4% were school bus trips.

Walking and Bicycling to Transit

Walking is the dominant mode of access to transit. The census walk to work mode share does not include walk trips to transit, since a walk trip to transit is counted as a transit trip rather than as a walk trip. In areas with high transit ridership the census walk to work numbers significantly undercount the amount of walking to or from work. According to the 2004 *State of the Commute Survey*, 83% of bus commuters walk to the bus.⁸

⁷ 1994 COG/TPB Household Travel Survey: *Summary of Major Findings*. January, 1998. Metropolitan Washington Council of Governments, page 5.

⁸ 2004 *State of the Commute Survey Results*. Metropolitan Washington Council of Governments, p. 63.

In 2002 WMATA surveyed passengers at all 83 of its Metrorail stations. The primary purpose of the survey was to estimate the percentage of total ridership residing in each jurisdiction. Passengers *entering* each Metro station were queried throughout the entire day, so the “mode of access” number for any given Metro station includes both people on their way to work or some other destination, and those on their way home. “Mode of Access” is the mode people use to get to the station, not to leave it.

*61% of
Metrorail
Passengers
Walk to the
Station*

Table 2-10 in Appendix G and Table 2-11 in Appendix H show the number of passengers who arrived at each station on a given day by bicycle, on foot, and by all modes put together. On average, 60.74% of all Metrorail passengers walked to the station, while only 0.31% arrived by bicycle. 15% parked and rode.⁹ 5% were dropped off by someone, and another 11% arrived at the Metro station by bus. “Mode of Access” by foot numbers are higher than the number of commuters who report getting to Metro on foot in the 2004 *State of the Commute Survey*, because “mode of access” to any given station includes people who are returning *from* work. Another likely reason for the difference is that the *State of the Commute Survey* includes only those using Metro for commuting, while the *Passenger Rail Survey* includes those using Metrorail for all purposes.

Mode of Access varies greatly by station, from Federal Center, with 94.2% access by foot, to Branch Avenue, with 0.9% access by foot. The top thirty stations for pedestrian access (as a percentage of total passengers accessing that station) are all located in the District of Columbia, Arlington, or Alexandria. Stations with a very high share of pedestrians tend to be located in major employment centers, with people walking from work to the station, rather than from home to the station. However, largely residential-area stations such as Woodley Park, Cleveland Park, Eastern Market, and Columbia Heights are found in the top thirty. Dense, mixed-use areas such as Bethesda, Foggy Bottom, Crystal City, Pentagon City, Friendship Heights, Van Ness, Dupont Circle, Shaw, and the Rosslyn-Ballston Corridor have high percentages of pedestrian access as well.

The bicycle mode of access to transit, according to the 2002 WMATA *Rail Passenger Survey*, was 0.31%, and ranged from 3% at College Park to zero at 23 stations. Stations with more bicycling tended to be located in the western portion of the region, have access to a major shared-use path, be near a major University, and/or be located in an area with a bicycle-friendly street grid. Stations with no bicycling are either in dense urban employment centers with no bicycle parking, or are located in the eastern portion of the region. Of the

⁹ 2002 WMATA Rail Passenger Survey, WB&A Market Research, from the table “Origin Station by Mode of Access”.

fourteen stations located east of the Anacostia River in 2002, ten had no bicycle use at all. All stations in Fairfax and Montgomery Counties had some bicycle use. The WMATA *Rail Passenger Survey* confirms what the census tells us about the distribution of walking and bicycling in the region, with walking and bicycling heavily concentrated in the Metro core and at certain inner suburban stations.

Outlook

Walking and bicycling taken together are significant travel modes in the Washington region, especially for non-work trips, and for trips to transit. Walking is the larger mode, but it is shrinking, while cycling is less common and is stable at the regional level.

Commutes are getting longer across the region, and the fastest population growth is taking place in outer jurisdictions that have low and declining levels of walking and bicycling. Those areas have developed in ways that make utilitarian walking and bicycling difficult and dangerous, with long distances, lack of direct routes, heavy, fast automobile traffic, and incomplete facilities for walking or bicycling.

The story in the urban core, however, is different. In the District of Columbia, Arlington, Alexandria, and portions of Montgomery County, walking is holding its own, while bicycling is expanding rapidly. Where one finds mixed-use activity centers, one finds a lot of people walking and bicycling. Where land uses are separated and development densities are lower, walking and bicycling are less common.

It is likely that the urban core and inner suburban communities will develop over the next thirty years ways that will be conducive to walking and bicycling. Many inner suburban activity centers have already reached critical levels of traffic congestion. Land values in the inner jurisdictions have been rising rapidly, and regional projections call for rapid employment growth in these same areas. 80% of the region's employment is currently found within a series of "regional activity centers", or concentrations of employment and housing identified by the TPB. Seventy percent of regional employment growth to 2030 is planned to take place within or directly adjacent to those centers, as well as thirty-six percent of household

Centers*

growth.¹⁰ Under current zoning, far more workers are projected to arrive in the region than there will be homes built for them, and transport links will not be adequate for them to commute from outside the region.¹¹ The COG Board of Directors has concluded that some land will need to be replanned and re-zoned to accommodate sufficient housing to meet employment projections. If redevelopment occurs in ways that are consistent with the *TPB Vision*, creating activity centers that mix jobs, housing and services in a walkable environment, conditions will be favorable for growth in walking and bicycling.

¹¹ Metropolitan Washington Council of Governments, *Growth Trends to 2030: Cooperative Forecasting in the Washington Region*, October, 2005. Pp. 2, 14-15.

Data Sources

Major sources of data for bicycling and walking in the Washington region include the US Census, the Commuter Connections *State of the Commute Survey*, the 1994 COG/TPB *Household Travel Survey*, COG/TPB's cordon counts, pedestrian and bicycle crash data from the Departments of Transportation, WMATA's 2002 *Rail Passenger Survey*, and the 2004 *Bike to Work Day Survey*.

A. 2000 US Census

The most fine-grained data on travel behavior comes from the Census. Every 10 years the Census Bureau asks roughly one in seven individuals (those who fill out the 'long form') how they get to work. People are polled at their home, not at their place of work. The most recent data available is from the 2000 Census. The biggest limitation of the Census data is that it only contains commute trips. Only one quarter of all trips in the Washington region are commute trips.¹² However, commute trips occur at the most congested time of day.

B. 2002 COG/TPB Cordon Counts

COG/TPB's cordon counts are conducted by machine or in person, on specific roads or trails. In cordon counts, COG/TPB counts the volume of traffic crossing a series of points along an imaginary circle. For example, one cordon line is the Capital Beltway. At approximately 60 points along the Beltway, COG/TPB counts all vehicles crossing over or under the Beltway. Another cordon line is known as the Metro Core, circling downtown DC and part of Arlington. Counts take place on a single day, so results may vary widely depending on weather, transportation incidents, security emergencies, or other factors. Pedestrians are not counted. Bicyclists crossing the cordon line may or may not be commuters; they are counted but not stopped or asked their trip purpose. In most cases the numbers represent only one day of counting and can not be viewed as a daily average.

C. 2004 Commuter Connections State of the Commuter Survey

The *State of the Commute Survey* is a random sample survey of 7,200 employed persons in the 12 counties and four independent cities of the Washington Metropolitan designated non-attainment region. Commuter Connections commissions this survey in order to evaluate the effectiveness of its programs. The region polled is the Washington Metropolitan Statistical Area, shown in figure

12 National Capital Region Transportation Planning Board, *1994 COG/TPB Household Travel Survey: Summary of Major Findings*. January, 1998. Page 4.

i-1 on page i-4. The sample size of the *State of the Commute Survey* permitted the calculation of walk/bike mode shares by annual income, ethnicity, age, and state of residence.

The SOC survey does not provide any information on non-work trips. Surveys were carried out from February 7th to May 2nd, 2004, by telephone, and asked about behavior “last week”. This methodology differs somewhat from U.S. Census, which asks about behavior during the first week in April. The 2001 and 2004 SOC surveys show lower numbers for walking and bicycling than does the census.

D. 1994 COG/TPB Household Travel Survey

In 1994 consultants for the Council of Governments conducted a survey of more than 11,000 persons in 4,800 households throughout the metropolitan Washington region, about trips made on a randomly assigned weekday for their household. The survey was conducted in two waves, the first in May and June of 1994, the second in October and November of 1994. In each wave of the survey, randomly selected Washington area households were contacted by telephone and asked to participate in a one-day travel survey. Those households agreeing to participate were sent a travel survey packet containing information on the survey and a travel diary for each member of the household age 5 and older. Instructions in the survey packet asked all eligible household members, age 5 or more, to record in the enclosed travel diaries all trips made on a specific weekday that had been randomly selected for their household. Reminder cards were sent and phone calls made. Then beginning on the day after the travel day consultant staff began calling each participant household to obtain a telephone report of all trips made by each household member on the household’s travel survey day. The net response rate was 40%.

The data collected in the COG/TPB Household Travel Survey is used to develop an understanding of the basic factors that determine the amount and nature of daily travel in the Metropolitan region. They are also used to predict changes in daily travel patterns in response to current development trends and changes in regional transportation policies and programs.

E. 2002 WMATA Rail Passenger Survey

WMATA carried out a survey of rail passengers in 2002. Surveys were carried out between April 8 and May 22, 2002. Data were collected for the full day, divided into a.m. and p.m. peak and off-peak periods. Subjects were interviewed in Metro rail stations. The primary purpose of the survey was to allow WMATA to estimate the percentage of total ridership residing in jurisdiction. However, the survey also asked riders what mode of transportation

they used to access or egress the station. 57,700 responses were gathered.

F. 2004 Bike to Work Day Survey

The *Bike to Work Day Survey* is a survey of participants in the regional Bike to Work Day of May 7, 2004. It is not a random sample, but it provides a portrait of a self-selected group of cyclists. In November 2004, COG/TPB mailed surveys to all 4,200 registered participants, and got back 1,240 completed surveys, a response rate of 30%.

Participants in Bike to Work Day often rode considerable distances for the event, with 18% riding 10-15 miles, and another 12% riding more than 15 miles. However, the post-ride survey indicates that people may be willing to ride farther for a one-day event than they will on a daily basis. Several months after the event participants were asked if they still biked to work, and if not why not. Of the 354 respondents who did not continue riding to work after participating in Bike to Work Day, 42% cited weather, while another 35% cited lack of a safe route, 31% cited distance, 18% cited lack of showers or changing facilities, 10% cited lack of bike parking/storage, and 8% cited the need for a car to take care of personal business.

Chapter 3
Pedestrian and Bicycle Safety

Overview

Pedestrian and bicycle fatalities and injuries are a serious problem in the Washington region. Nearly a quarter of all traffic fatalities in the region are pedestrian or cyclist. Every jurisdiction has a significant pedestrian safety problem. Pedestrian and bicyclist fatalities account for at least 10% of total traffic fatalities in every major jurisdiction.

While areas and demographic groups are affected, some groups are more affected than others. Urban areas and inner suburban areas are more heavily affected than the outer suburbs, Hispanics and African-Americans more than Whites and Asians.

This section will describe the scope of the pedestrian and bicycle safety problem, its distribution across the region by jurisdiction and ethnicity, and the legal rights and responsibilities of drivers, pedestrians, and bicyclists. It will also discuss the region's efforts to deal with the problem through the "Street Smart" pedestrian and bicycle safety campaign.

The Scope of the Problem

Pedestrian safety is a major problem nationally and in the metropolitan Washington region. Of 42,643 traffic fatalities in the United States in 2003, 4,749, or about 11%, were pedestrians.¹ Urban areas have higher pedestrian fatality rates than rural areas. The Washington-Baltimore region ranks 22nd out of the 50 largest metropolitan areas in terms of pedestrian deaths per capita.

Pedestrians and bicyclists account for nearly a quarter of those killed on the roads in the Washington region. Over 2,600 pedestrians and bicyclists are injured every year, and 89 are killed. On average, there are 370 traffic fatalities per year in the Washington region.² Chart 3-1 shows average annual pedestrian and bicycle fatalities in the Washington Region, as a proportion of total traffic fatalities.

¹ www.nhtsa.dot.gov

² Regional totals compiled from data provided by the District Department of Transportation, the Maryland Office of Highway Safety, and the Virginia Department of Motor Vehicles.

**Chart 3-1: Average Annual Pedestrian and Bicyclist Fatalities
in the Washington Region, 1994-2004**

Chart 3-2 shows the yearly variations in traffic fatalities from 1994-2004. Overall traffic fatalities were stable, and pedestrian and bicycle fatalities showed a slight downward trend. However, population and vehicle-miles traveled rose significantly during the period, while the mode share of walking fell.

**Chart 3-2: Pedestrian, Bicyclist, and Motorized Traffic Fatalities
in the Washington Region, 1994-2004**

Pedestrian injuries exact a steep toll as well. Of the approximately 3,000 persons hit by motor vehicles every year in the region, 90% suffer some sort of injury. Approximately 500 injured pedestrians every year require more than 24 hours of hospitalization, which at an average cost of about \$25,000 leads to more than \$12 million in hospitalization charges alone.³ This is probably only a fraction of the total financial costs, which would include costs for those hospitalized for less than 24 hours, further medical care, disability, and lost time at work. Many of the people being hit can ill afford such a setback.

Distribution of Pedestrian and Bicycle Fatalities by Jurisdiction

The region is often divided into an urban core, consisting of Arlington, Alexandria and the District of Columbia, the inner suburbs of Fairfax, Montgomery, and Prince George’s Counties, and the outer suburbs, such as Frederick, Loudoun, and Prince William Counties. Manassas, Manassas Park, the City of Falls Church, and the City of Fairfax are shown as “Other Northern Virginia”.⁴ Outer suburban jurisdictions had fewer pedestrian fatalities than inner jurisdictions, as seen in Chart 3-3.

**Chart 3-3:
Average Annual Pedestrian and Bicyclist Fatalities, 1994-2003**

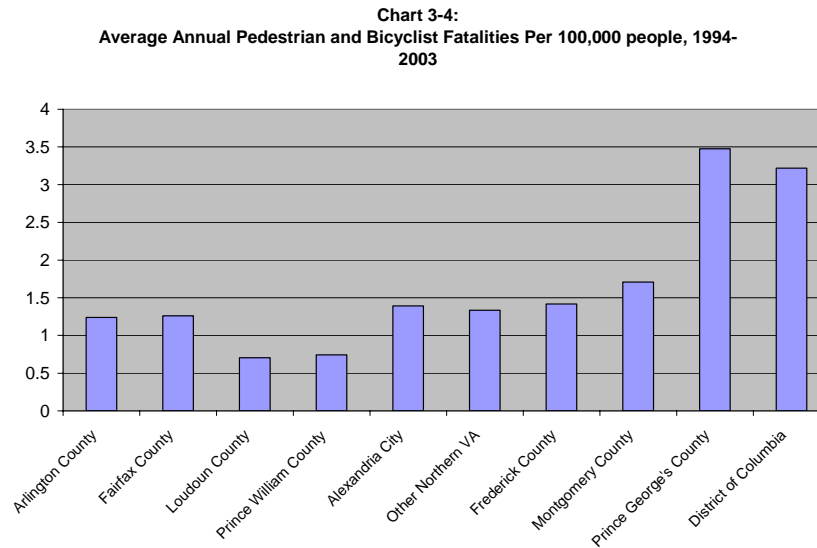

Even when calculated as a rate per 100,000 population, outer suburban jurisdictions had lower fatality rates than inner jurisdictions, a difference that probably reflects the lower pedestrian and bicycle mode share of the outer jurisdictions, as well as a daytime

³ Northern Virginia Injury Prevention Prevention Center, INOVA Regional Trauma Center (2005). *Pedestrian Injury in the Washington, D.C. Metropolitan Region*. Page 37.

⁴ Towns in Northern Virginia are not included in the surrounding Counties; their traffic fatalities are tallied separately.

population in the District of Columbia nearly twice as high as its resident population. Pedestrian and bicycle fatality rates in each jurisdiction are shown in Chart 3-4.

However, even the outer suburban jurisdictions have a serious pedestrian safety problem. In no major jurisdiction did pedestrian and bicyclist fatalities account for less than 10% of total traffic fatalities.

Walking and bicycling appear to be safer in the urban core than in the inner or outer suburbs. The rate of pedestrian fatalities does not directly correspond to the number of people walking. Urban core residents are four to six times as likely to walk to work as outer jurisdiction residents, but are only twice as likely to be killed in a pedestrian or bicycle crash. And as previously noted, the urban core's fatality numbers probably include many non-resident workers and tourists. The urban core has good pedestrian facilities and low traffic speeds, and drivers expect to see pedestrians and bicyclists.

There are large differences in the rates of hospitalization for pedestrian injury by ethnicity. The rate of hospitalization per 100,000 population for pedestrian injuries for Hispanics is nearly three times as high as that for Whites, and twice that for African-Americans.⁵

*Pedestrians
Find Safety
in Numbers*

Geographically, the highest rates of hospitalization are found in the area east of the Anacostia river in the District of Columbia, most of Prince George's County inside the beltway, the Columbia Pike corridor in

Arlington, the area between Fairfax City and Falls Church in Fairfax County, and Dumfries in Prince William County.⁶

The pedestrian crash rate tends to fall as the number of pedestrians at a location increases. Doubling the number of pedestrians at an intersection already crowded with pedestrians will usually result in little, if any, increase in pedestrian crashes.⁷ Similar effects have been noted for cyclists, with cities having the highest rates of bicycling also having the lowest crash rate per bicycle trip.⁸ Areas are safer with more people walking and bicycling, especially if facilities are improved and other measures are taken to improve pedestrian and bicycle safety. High levels of walking and bicycling are associated, in advanced industrialized nations, with very low auto-involved crash rates.⁹ Holland has half the overall traffic fatality rate of the United States, despite a very high walk and bike mode share.

Experience of other nations shows that it is possible to reduce pedestrian and bicycle fatalities while increasing walking and bicycling. On the other hand, it is not possible to eliminate pedestrian fatalities by eliminating pedestrian facilities and discouraging walking; even in our least pedestrian-oriented jurisdictions, pedestrian fatalities account for at least 10% of total traffic fatalities. For the foreseeable future there will be people without cars, and there will always be some trips that will be made on foot. The region's most dangerous areas for walking have high-speed roads and poor pedestrian facilities, together with people who lack automobiles.

Factors contributing to Pedestrian and Bicycle Crashes

Data from the Washington region indicate that drivers are about as likely as pedestrians to be at fault in a crash. Drivers were cited for a violation in about half the crashes.¹⁰ Males aged 25 to 34 are most likely to hit pedestrians, while pedestrians who are hit are most likely to be males aged 25 to 44. Pedestrian crashes are most likely to occur at the evening rush hour, 5-7 p.m., with 6-9 a.m. the second most likely.¹¹ Alcohol is a serious problem for both pedestrians and motorists, affecting approximately one third of crashes.

Legal Status of Bicyclists and Pedestrians

State traffic codes allow bicyclists to travel on most roadways with the general rights and responsibilities of drivers of vehicles. Bicyclists must ride in the same direction as traffic, use lights after dark, and yield to pedestrians. Like operators of other slow-moving vehicles, cyclists--when traveling at less than the normal speed of other traffic--should generally ride as far to the right as safely practicable, except when preparing to turn left, passing, avoiding obstructions, mandatory turn lanes or unsafe pavement conditions, or when the travel lane is not wide enough to safely split with a motor vehicle. Cyclists may use the full travel lane if the lane is too narrow to allow them to ride to the right of motor vehicles safely. Cyclists may usually ride on roadway shoulders, paths and sidewalks, except where prohibited. Cyclists have the rights and duties of pedestrians when traveling on paths, sidewalks, and crosswalks, however, they must yield to pedestrians in those locations. Rules relating to bicycles are summarized on page E-4 of the Metropolitan Washington Council of Governments' *Bike to Work Guide*, and in Table 3-1 below.¹²

Table 3-1: Selected Bicycle Rules in the Washington Area

	MARYLAND	DISTRICT OF COLUMBIA	VIRGINIA
Bicycle Position	When slower than other traffic, bicycle as close to the right as safely practicable, except when turning left, passing, avoiding pedestrians or road hazards, when the right turn lane is right turn only, or on a one way street. Does not apply in lanes too narrow to share with a motor vehicle.	Bicycle in the right most lane available for traffic, or as close as practicable to the right-hand curb or edge of the roadway, except when turning left or passing, avoiding pedestrians or road hazards, or on a one-way street. Does not apply in lanes 11 feet wide or less, or when necessary to comply with lane use restrictions.	When slower than other traffic, bike as close to the right as safely practicable, except when turning left, passing, avoiding hazards or traffic in mandatory turn lane, or traveling on a one-way street. Does not apply in lanes too narrow to share with motor vehicle.
Passing cars	Pass on left; not required to pass on left on one-way street or when passing vehicle turning left.	Pass on the left; may pass on right when automobile is trying left or when street is of sufficient width for two lines of moving vehicles.	Permitted to pass on right or left, pass in same lane or change lanes, or pass off road.
Turning left	From two-way to two-way streets; enter and leave intersection near center line of roadway. One-way to one-way; keep as close as practicable to left curb.	Same as MD.	Three ways permitted: like a motorist, pedestrian, and crosswalk.
Bicycling Two Abreast	Permitted when it does not endanger bicyclists or impede traffic	Same as MD.	Permitted when it does not impede traffic.

¹² See www.commuterconnections.org

	MARYLAND	DISTRICT OF COLUMBIA	VIRGINIA
Turning right	Stay as close as practicable to right-hand curb.	Same as MD.	Same as MD.
Restricted Roads	Prohibited from expressways, toll bridges, toll tunnels, and other marked roads.	No restricted roads. Bicyclists also allowed in bus lanes.	Prohibited from interstate and controlled access highways, as marked.
Cycling on Sidewalks	Banned except where allowed by local jurisdictions (allowed in Montgomery County)	Allowed except in the central business district, which is bounded by 23rd St NW, Massachusetts Ave, 2nd St NE-SE, D St SE to 14th St NW and Constitution Ave to 23rd St NW. Allowed where posted in this area	Allowed except where prohibited by local jurisdictions, such as Prince William County and Alexandria.
Mandatory Use of Bike Paths and Lanes	Use of bike lanes required when available. No required use of separated paths. Must use shoulder when speed limit is over 50 mph and when shoulder is as smooth as road.	Not required	None. Localities can no longer require use of bike paths adjacent to a road as of 7/1/04.
Helmets	Required for cyclists aged 15 and under	Not required	Required for cyclists age 14 and under in Arlington County, Fairfax County and City of Alexandria.
Lights	Front light required when dark.	Front light required when dark.	White front light required when dark. Red rear light (in addition to red rear reflector) required when dark on roads posted for 35 MPH or higher.

Pedestrians are not vehicle operators and are not subject to the same rules. Persons on rollerblades, skateboards, etc. operating on the street are considered pedestrians, but bicyclists are not. Motorists must yield to pedestrians when making turns across adjacent crosswalks. “Jaywalking” is legal in most locations, but pedestrians must yield to motorists if they are crossing at a location other than a crosswalk. Pedestrians may not cross at mid-block if they are between two signal-controlled intersections; they must use the crosswalk. Tables 3-2 and 3-3 summarize the rules in each state regarding pedestrians.

**Table 3-2:
Pedestrian Traffic Law—Motor Vehicles Drivers**

	MARYLAND	DISTRICT OF COLUMBIA	VIRGINIA ¹³
Crosswalk Definition	Any intersection of two roadways is a legal crosswalk, whether marked or not. Pedestrians have the same rights in marked crosswalks as in unmarked crosswalks	Same as Maryland	Same as Maryland
Blocking a Crosswalk	A motorist may not park or stop in a crosswalk	Same as Maryland	Same as Maryland
Sidewalk	Pedestrians have the right of way in the sidewalk	Pedestrians have the right of way in the sidewalk. Parking on the sidewalk prohibited.	Pedestrians have the right of way in the sidewalk.
Right Turn on Red	Vehicles turning right on red must yield to pedestrians in the crosswalk	Same as Maryland	Same as Maryland
Turn on Green	Vehicles turning either right or left on a green light must yield to pedestrians in the adjacent crosswalk	Same as Maryland	Same as Maryland
Red Light	Motorist should stop before the crosswalk, or if no crosswalk is striped, before the intersection	A pedestrian who has begun crossing on the walk signal shall be given the right-of-way by the driver of any vehicle to continue to the opposite sidewalk or safety island, whichever is nearest.	Same as Maryland
Stop-Controlled or Uncontrolled Intersection	Motorist must stop for any pedestrian in the same half of the roadway as the motorist, or who is approaching from the adjacent lane in the other half of the roadway. No motorist may pass another vehicle which has stopped for a pedestrian	The driver of a vehicle shall STOP and give right of way to a pedestrian crossing the roadway within any marked crosswalk or unmarked crosswalk at an intersection.	The drivers of vehicles entering, crossing, or turning at intersections shall change their course, slow down, or <i>stop if necessary</i> to permit pedestrians to cross such intersections safely. Pedestrians have the right of way unless the speed limit is more than 35 mph, in which case the motorist has the right of way.

¹³ <http://virginiadot.org/infoservice/bk-laws.asp>, www.bikewalkvirginia.org

**Table 3-3:
Pedestrian Traffic Law—Pedestrians**

	MARYLAND	DISTRICT OF COLUMBIA	VIRGINIA
Green light	A pedestrian facing a green light (other than a turn arrow) may cross the roadway, within a marked or an unmarked crosswalk	Same as Maryland	Same as Maryland
Red light	Pedestrians shall not enter the roadway on a steady red light	Same as Maryland	Same as Maryland
Pedestrian Control Signal	Pedestrians shall not enter the roadway when there is a flashing “Don’t Walk” or “Wait” indicator	Same as Maryland	Same as Maryland
Stop-controlled or uncontrolled intersection	Pedestrians may cross the roadway within a marked or unmarked crosswalk	Same as Maryland	Same as Maryland, except the pedestrian must yield to motor vehicle traffic if the speed limit is 35 mph or more. Pedestrians may not disregard approaching traffic when entering or crossing an intersection
Crossing at Other Than Crosswalks	<p>(a) If a pedestrian crosses a roadway at any point other than in a marked crosswalk or in an unmarked crosswalk at an intersection, the pedestrian shall yield the right-of-way to any vehicle.</p> <p>(b) If a pedestrian crosses a roadway at a point where a pedestrian tunnel or overhead pedestrian crossing is provided, the pedestrian shall yield right of way to any vehicle.</p> <p>(c) Between adjacent intersections at which a traffic control signal is in operation, a pedestrian may cross a roadway only in a marked crosswalk.</p> <p>(d) A pedestrian may not cross a roadway intersection diagonally.</p>	<p>Essentially the same as Maryland, but with a specific prohibition on walking suddenly into the path of a vehicle:</p> <p>(a) No pedestrian shall suddenly leave a curb, safety platform, safety zone, loading platform or other designated place of safety and walk or turn into the path of a vehicle which is so close that it is impossible for the driver to yield.</p>	Same as Maryland, except that pedestrians may not enter the roadway at any point where drivers view of them is blocked by a parked vehicle or other obstruction.
Pedestrians on Roadways	<p>(a) A pedestrian may not walk on a roadway where sidewalks are provided.</p> <p>(b) Where no sidewalk</p>	Same as Maryland	Same as Maryland

	is provided, a pedestrian may walk only on the left side of the roadway, facing traffic.

Pedestrian and Bicyclist Enforcement and Education: The “Street Smart” Campaign

Pedestrian and bicycle safety efforts generally fall into three broad categories of actions, the three E’s: Engineering, Education, and Enforcement. Engineering deals with the design of safer roads, streets, and pedestrian and bicycle facilities. Education includes both classroom-based training and behavioral modification campaigns. Enforcement consists of enforcement of the traffic laws with respect to pedestrians and bicyclists. The regional pedestrian and bicycle safety campaign, Street Smart, deals primarily with education through mass media.

Street Smart was created in 2002 by the region’s governments in response to an ongoing regional pedestrian and bicycle safety problem. Since the region is a single media market, a unified regional campaign is the most cost-effective approach. The program is supported by federal funds made available through state governments, with local funds matching the federal funds, and is administered by the National Capital Region Transportation Planning Board.

The Street Smart campaign is a one-month blitz of radio, transit, and print advertising. The goal of the campaign is to change driver and pedestrian behavior in order to reduce deaths and injuries. Motorists are urged to “Stop for Pedestrians” and “Watch for Bicyclists at Intersections,” and pedestrians are urged to “Look Before You Cross.” All materials, including radio spots, are translated into Spanish. One-month campaigns were held in October, 2002, and annually since 2004.

Efforts to enforce pedestrian laws have also been stepped up in conjunction with the “Street Smart” pedestrian and bicycle safety campaign. Law enforcement has helped reinforce the campaign message, just as it has been used effectively as part of anti-drunk driving and seatbelt advertising campaigns. Public awareness of these heightened enforcement activities has been a key aspect of this campaign. Research shows that fear of fines and legal consequences is more effective at changing behavior than fear of death or injury. Also the TV and press media often covers enforcement stings, increasing the public’s perception that they are likely to be ticketed for breaking the law.

Evaluation Results

Evaluation results show that the prime target audience, male drivers aged 18 to 34, is hearing the message. For example, surveys taken before and after the campaign of April, 2004 show that awareness of the Street Smart messages rose by 22 percentage points among male drivers aged 18 to 34. There is some evidence that drivers are more likely to yield to pedestrians, and that pedestrians are becoming more careful. Specifically, in May 2005:

- 17% of respondents reported that they “had to swerve to avoid a pedestrian in the last 7 days”, down from 32% in 2002
- 60% reported frequently observing motorists failing to yield to pedestrians, down from 76% in 2002
- Pedestrian and bicyclist fatalities in the Washington region fell from 2001-2004. The average fatality rate for 1994-2004 was 87. Table 3-4 shows the pedestrian and bicyclist fatalities for the region from 2001-2004.

Table 3-4¹⁴

Year	2001	2002	2003	2004
Fatalities	88	82	86	71

Outlook

Pedestrian and bicycle safety has drawn increasing attention in the Washington region and at all levels of government. The Street Smart campaign is yielding positive results. Better vehicle-pedestrian crash-compatibility, safer street design, retro-reflective clothing, and safer pedestrian and driver behavior will help reduce pedestrian and bicycle fatalities and injuries.

On the other hand, as the region’s population and density increase, including growing numbers of immigrants and others for whom walking and bicycling are a primary mode of transportation, preventing pedestrian and bicyclist fatalities and injuries will remain a major challenge.

¹⁴ District of Columbia Department of Transportation, Maryland Office of Highway Safety, Virginia DMV

Chapter 4

Existing Facilities for Bicyclists and Pedestrians

Overview

The Washington region has excellent long-distance separated facilities for bicyclists and pedestrians, and an urban core and certain regional activity centers that have good pedestrian and bicycle facilities. On the other hand, many activity centers, not originally designed with pedestrians in mind, have grown dense enough to generate significant pedestrian traffic, and face challenges in terms of providing safe facilities and crossing locations for pedestrians and bicyclists. Other parts of the region have developed at low densities, with separated land uses and indirect routes, which increase pedestrian and bicycle travel time. Pedestrian and bicycle accommodations are not always provided.¹

*Informal Foot-
Paths Show where
People are Walking*

Bicycle connections with transit are generally good, with bicycle parking, bus bicycle racks, and bikes permitted on Metrorail at most hours. Walking is the primary mode of access to transit. Conditions for pedestrian access are excellent at many rail stations, though at some rail stations, originally designed primarily with auto and transit access in mind, pedestrian access could be improved. Bus stops in places originally designed primarily for automobiles often have access and safety problems.

Pedestrians are found throughout the region, and pedestrian traffic is increasingly found in places that were not built for it. This section highlights some of the region's successes in providing for bicycling and walking. These successes can serve as examples of what the region needs to serve its pedestrians and bicyclists.

Shared-Use Paths²

The Washington region is renowned for the quality and extent of its major shared-use paths. Shared-use paths are typically located in their own right-of-

¹ Photo of Informal Path, Southern Avenue, Prince George's County, MD: COG/TPB, Michael Farrell

² Photo of Mt. Vernon Trail, Arlington, VA: COG/TPB, Michael Farrell

way, such as a canal, railway, or stream valley, or in the right-of-way of a limited-access highway or parkway, such as the George Washington Memorial Parkway. Shared-use paths are eight to twelve feet in width. The region has approximately 190 miles of major shared-use paths, either paved or level packed gravel surface suitable for road bikes. Well-known trails include the W&OD and Mount Vernon Trails in Virginia, and the C&O Canal, Capital Crescent, and Rock Creek Trails connecting the District of Columbia and Maryland. Many of the region's shared-use paths go through heavily populated areas, connect major employment centers, and get significant commuter traffic. More information on trails in the Washington region can be found at www.bikewashington.org.

The region continues to build new trails along stream valleys and in conjunction with major highway projects, but the remaining inventory of disused rail lines, which often provide the best opportunities for shared-use paths, is fairly small.

Side-Paths³

Side-paths differ from shared-use paths in that they do not have their own right of way, but are closely adjacent to a non-limited access roadway and thus subject to more frequent conflict with driveways, side streets, and turning traffic. Side-paths differ from sidewalks in that they must be at least eight feet wide and are designed to meet the needs of bicyclists.

The Washington region has approximately 300 miles of side-paths, and there are plans to expand that mileage considerably.

Side-paths meet the need for a separated pedestrian facility and provide separation from traffic that is valued by child and slow-moving cyclists, especially in places where the road has speeds of 40 mph or more and high traffic volumes. However, the AASHTO (American Association of State Highway and Transportation Officials) Guide for the Development of Bicycle Facilities offers a number of cautions regarding the use of side-paths or wide sidewalks for bicycles. Frequent driveways, especially with poor sightlines, are hazardous to bicyclists on side-paths. Side-paths remove bicyclists from the motorists' line of sight and allow travel against the flow of traffic, so they may increase the potential for conflicts with motor vehicles at intersections. Since the facility is shared with pedestrians, there is also a potential for cyclist-pedestrian crashes. Side-paths are most suitable where driveways

³ Photo of Sidepath on the Fairfax County Parkway: Photographer Unknown

and intersections are few and sight-lines are good. Intersection crossings should be designed carefully, with a protected signal phase providing the best level of protection.

Bicycle Lanes

Bicycle lanes are marked lanes 4-6 feet wide in the public right-of-way that are by law exclusively or preferentially for use by bicyclists. Bike lanes are marked with bicycle symbols and arrows, which indicate the correct direction of travel. Bike lanes are provided on both sides of the street, except for one-way streets, and allow travel only in the same direction as adjacent motor vehicle traffic. On-street bicycle lanes are generally much less expensive than separated paths. Bike lanes decrease wrong-way riding, define the road space that cyclists are expected to use, increase cyclists' comfort level, and call attention to the presence of cyclists on the roadway. Bicycle lanes are not generally considered safe or adequate for pedestrians, though in rural areas without sidewalks the roadway shoulder serves as both a bicycle lane and as a pedestrian facility.⁴

The number of bicycle lanes is growing rapidly. The District of Columbia currently has 19 miles of bicycle lanes, up from three in 1995, Arlington County has 20 miles, up from three in 1995, and Montgomery County has 17 miles.⁵ The regional mileage of bicycle lanes can be expected to expand significantly in the future as the District of Columbia, Arlington County, and Montgomery County all have ambitious plans to build more bicycle lanes. A map of regional bicycle paths,

lanes, and on-road routes can be ordered at www.adcmap.com.

Dual Facilities

In recognition of the fact that fast-moving cyclists may be better off with an on-road facility, Montgomery County is planning many of its bicycle routes as dual facilities, with both an on-road bike lane and a side-path for pedestrians and slow bicyclists. VDOT's *Northern Virginia Bikeway and Regional Trail Study* recommends that both on- and off-road accommodation be provided.⁶ Under the new routine accommodation policy, VDOT is to provide adequate facilities for pedestrians and bicyclists even if not called for in the local plan.

⁴ Bike lane photo: www.pedbikeimages.org / Dan Burden

⁵ *Countywide Bikeways Functional Master Plan*, March 2005. Maryland-National Capital Park and Planning Commission. Page 12.

⁶ *Northern Virginia Regional Bikeway and Trail Network Study*. November, 2003. Virginia Department of Transportation, Northern District Office. Page 19.

Where bicycle and pedestrian volume warrant it, and right of way permits, multi-use paths may be split into parallel pedestrian and bicycle paths. This separation allows cyclists and rollerbladers to maintain speed without risk to pedestrians. The Washington & Old Dominion Trail in Northern Virginia includes several sections with gravel pedestrian paths that parallel the paved shared-use path.

Signed Bicycle Routes

The region has hundreds of miles of signed bicycle routes. Signed routes have the advantage of being inexpensive and informative for cyclists. A signed route has not necessarily had any bicycle-related improvements apart from signing. However, bicycle-friendly features such as paved shoulders, a wide curb lane, or low traffic volumes or speeds *may* be present.

Long-Distance Bicycle Routes

Several notable long-distance routes promoted by national-level organizations pass through the Washington region. These include the East Coast Greenway, Bicycle Route 1, and the American Discovery Trail. The East Coast Greenway Alliance is promoting what will eventually be a mostly off-road path connecting all the major cities of the East Coast. Currently 20% open for public use, it will span 2,600 miles from Calais, Maine to Key West, Florida. With the exception of the National Capital Mall, the proposed route through the Washington region is not yet signed. Bicycle Route 1 is part of a national network of low-traffic road routes promoted by the Adventure Cycling Association. The American Discovery Trail is a coast-to-coast, recreational, non-motorized trail, which follows the C&O Canal Towpath and the Anacostia River Tributary Trails. All organizations promoting long-distance routes rely on local agencies and organizations to realize their vision.

Exclusive Bus/Bicycle Lanes

Exclusive bus lanes are sometimes used on streets with heavy bus traffic. Bicycles are sometimes permitted to use those lanes. Bus/Bike Lanes can be found in the District of Columbia. Conflicts can occur due to differences in speed between buses and bicyclists.

Bridges

Currently the southernmost opportunity for cyclists and pedestrians to cross the Potomac is at the 14th Street Bridge. When the Woodrow Wilson Bridge project is finished,

bicyclists and pedestrians will be able to cross the Potomac on the capital beltway at Alexandria. The Memorial Bridge, the Theodore Roosevelt Bridge, the Key Bridge, and the Chain Bridge all have bicycle and pedestrian facilities. In the north, cyclists and pedestrians may use the ferry at White's Ferry, which connects Montgomery County and Loudoun County. Cyclists may use the US 15 bridge at Point of Rocks and the MD 17 bridge at Brunswick to get across Frederick County and Loudoun County, though they have no separated facilities.

On the Anacostia river separated bicycle and pedestrian facilities of uneven quality are available on the South Capitol Street (Frederick Douglas Memorial) bridge, the 11th Street bridge, the Pennsylvania Avenue Bridge, the East Capitol Street Bridge, and the Benning Road Bridge. The District of Columbia plans to upgrade these crossings as the Anacostia waterfront is developed.

Bicycles and Public Transit

The region has made tremendous progress integrating bicycling and public transit, with secure bike parking available at most rail stations, bicycles permitted on Metrorail at most times, and most of the buses in the region now equipped with bicycle racks. Specific agency policies and facilities are described below.

Rail

Bicycles are allowed on Metrorail at any time except weekdays from 7 to 10 a.m. and 4 to 7 p.m., and the Fourth of July. No permit is required. Only folding bicycles fully enclosed in a carrying case are permitted on MARC and VRE. Folding bicycles are allowed on Metrorail during rush hour if fully enclosed.

Bicycle racks or lockers are available at most Metrorail stations. Appendix I shows the number of lockers and rack spaces at each metro station. As of April, 2006 WMATA had 1,280 locker and 1,854 rack bicycle parking spaces at Metrorail stations.⁷ Racks are first-come, first served.⁸

All VRE stations and most MARC stations have bicycle racks.

Bus

⁷ *Bicycle Locker and Rack Survey: Existing Conditions and Planning for the Future*. May 2006, WMATA. Powerpoint presentation, posted under the Bicycle and Pedestrian Subcommittee at www.mwcog.org.

⁸ Details on bicycle parking locations and locker rental can be found at <http://www.wmata.com/Metrorail/bikeracks.cfm>

Metrobuses all have racks on the front that carry not more than two bicycles. No permit is required. Information on how to use bus bike racks is available at www.waba.org. Folding bicycles are not allowed inside Metrobuses.

Montgomery County Ride-On, Arlington Transit, and Annapolis Transit buses are all equipped with bicycle racks, as are many Maryland Transit Administration buses.

Park and Ride

Of the 175 park and ride lots in the Washington DC-MD-VA Metropolitan Statistical Area, about 50 have bike lockers or racks.

Pedestrian Access to Transit

82% of Metrobus passengers walk to transit, and 60% of all Metrorail trips start with the passenger walking to the rail station. However, the quality of pedestrian access to Metrorail and Metrobus is uneven. Many suburban rail stations were built with an emphasis on automobile and bus access. Bus stops are often placed in areas with no sidewalks or available crosswalks. Inventorying conditions and making recommendations for specific locations is beyond the scope of this plan, but there have been a number of efforts to do so, such as MTA's Access 2000 Study, COG/TPB's Walkable Communities Workshops, the efforts of the Bike Parking Work Group of the Bicycle and Pedestrian Subcommittee, and efforts in Fairfax County and Montgomery County to improve bus stop safety. WMATA is developing a new set of *Guidelines for Station Site and Access Planning*, and WMATA has plans to upgrade pedestrian access at Metrorail stations and carry out station-area development. WMATA is completing an inventory of existing conditions at bus stops in the region and will have an integrated list of conditions in 2007.

Outlook

Facilities for bicycling and walking in the Washington region are likely to improve significantly in the future. Federal, regional, state and local policies and transit agency initiatives all call for better and more complete facilities. Bicycle lanes and dual facilities for pedestrians and bicyclists will become more common.

Chapter 5
Best Practices

The *TPB Vision* calls for a transportation system that allows convenient and safe bicycle and pedestrian access, with dynamic regional activity centers and an urban core that contain a mix of jobs, housing and services in a walkable environment. In order to achieve these goals, the Bicycle and Pedestrian Subcommittee has developed the following series of recommended best practices for consideration by the member jurisdictions. Many of the member jurisdictions have already implemented some or all of these recommendations.

A. Enhance agency efforts to incorporate bicycle and pedestrian elements in all jurisdictional planning and design policies.

1. Include bicycling and walking, including provisions for persons with disabilities, in all stages of the transportation and land use planning process, from initial concept through implementation.¹

The Virginia Department of Transportation (VDOT) is committed to routinely accommodating bicycling and walking "as fundamental travel modes and integral components...in the planning, funding, design, construction, operation, and maintenance of Virginia's transportation network"

2. Consistent with federal policy, establish bicycle and pedestrian ways in all new construction and reconstruction transportation projects in urbanized areas unless one or more of three conditions are met:

- a. Bicyclists and pedestrians are prohibited by law from using the roadway. In this instance, a greater effort may be necessary to accommodate bicyclists and pedestrians elsewhere within the right of way or within the same transportation corridor.

- b. The cost of establishing bikeways or walkways would be excessively disproportionate to the need or probable use. Excessively disproportionate is defined as exceeding twenty percent of the cost of the larger transportation project.

- c. Where sparsity of population or other factors indicate an absence of need.

3. Take into account likely future demand for bicycling and walking facilities in planning transportation projects and do not adopt

Many Agencies involve Walking and Biking Advocates in the Planning Process

¹ Ft. Totten, DC Photo: COG/TPB, Michael Farrell

designs that would preclude future improvements.

4. Encourage public participation by bicyclists and pedestrians and other community groups in the planning process.
5. Ensure adequate funding for bicycle and pedestrian transportation staff and facilities, including land acquisition, design, construction, and proper maintenance.

In 2006, the region budgeted roughly \$69 million for bicycle and pedestrian projects, or about 2.4% of transportation capital expenditures

6. Integrate bicycling and walking into new development.
 - a. Require land developers to finance and construct sidewalks, shared-use paths, and bicycle parking facilities within their developments.
 - b. Require land developers to design developments in a way that facilitates internal and external bicycle and pedestrian access. New development should feature a dense network of interconnected streets to minimize trip distance and offer many low-speed, low-traffic routes. Superblock and cul-de-sac development patterns should be discouraged, and transit-oriented development should be encouraged.
 7. Design, construct, operate, and maintain sidewalks, shared-use paths, street crossings (including over- and undercrossings), pedestrian signals, signs, street furniture, transit stops and facilities, and all connecting pathways so that all pedestrians, including people with disabilities, can travel safely and independently.
 8. Improve inter-jurisdictional coordination to identify, construct and preserve multi-jurisdictional routes, and provide connecting links for existing routes to assure the establishment of a continuous bicycle and pedestrian transportation system throughout the Washington metropolitan area.
 - a. Identify networks of existing bicycle routes (both on-street and off-street) in the urban core, suburbs, developing fringe, as well as connecting long distance inter-city routes. Ensure that these routes are included in land use and transportation plans, and not eliminated as development occurs.
 - b. Identify shared-use path corridors before they are developed, and preserve opportunities for development as shared-use paths.
 - c. Identify existing physical barriers to bicycling (such as rivers and streams, bridges, railroad tracks, highway crossings, and limited access highways with no crossing route) and identify solutions to overcome them.
-

B. Develop and adhere to consistent bicycle and pedestrian facility design and construction standards in each jurisdiction:

1. Develop guidelines and requirements for on-street/off-street facilities.
2. Assure adequate planning, construction and maintenance standards for comfortable and safe bicycling on both on-street routes and off-street paths, as well comfortable and safe walking on paths and sidewalks. Assure that safety is the primary consideration in all design standards.

- a. Adopt, as minimum standards for privately and publicly built facilities, the *AASHTO Guide for the Development of Bicycle Facilities*, *AASHTO's A Policy on Geometric Design of Highways and Streets*, and the *AASHTO Guide for the Planning, Design and Operation of Pedestrian Facilities*, the *ADA Accessibility Guidelines* from the U.S. Architectural and Transportation Barriers Compliance Board (Access Board), and the *Manual on Uniform Traffic Control Devices* from the Federal Highway Administration.

- b. Establish and maintain minimum design and maintenance standards for each type of facility.

3. Coordinate planning and construction of routes crossing jurisdictional boundaries

- a. Implement uniform wayfinding and/or designation for inter-jurisdictional routes that will provide easily understood instructions and information.

4. Improve Access for Persons with Disabilities to Pedestrian Facilities²

The Transportation Planning Board's Access for All Advisory Committee has identified the following recommended best practices for improving access for persons with disabilities to pedestrian facilities. More detailed recommendations can be found in the *ADA Accessibility Guidelines* as noted above. With the exception of hand-rails on steep sidewalks, all of the following practices are legally required under the ADA for all new facilities and all reconstructed facilities:

² "Lessons Learned" fact sheet for Disability Awareness Day. National Capital Region Transportation Planning Board Access for All Committee, October 20, 2004.

- a. Sidewalks should have curb ramps. Ramps should be well-maintained, well-placed, and not too steep in order to permit their use by persons in wheelchairs.³
- b. The height of wheelchair users should be considered when placing shrubs or other objects where they might block them from the view of motorists.
- c. Objects such as security barriers, fences, fire hydrants, telephone poles, parking meters, newspaper boxes, signal control boxes, and other street furniture should be placed in locations where they will not block curb ramps.
- d. The placement of crosswalk buttons must take into consideration the needs of people with disabilities.
- e. Audible pedestrian signals make communities safer for all pedestrians, including seniors and children as well as people with visual impairments.
- f. Sidewalks with steep slopes are difficult for people with disabilities to navigate, especially for people who use manual wheelchairs or people who have trouble walking. Hand rails could help mitigate these difficulties.

Poorly Placed Curb Ramps and Rough Pavement can be Difficult to Navigate in a Wheelchair

New Bike Racks and Lockers at New York Avenue Metro Station

C. Improve bicycle and pedestrian circulation within and between regional activity centers and the urban core.

- 1. Improve sidewalks, bikeways, intersections, signage and links to transit for bicyclists and pedestrians in activity centers
- 2. Improve access to and between regional activity centers.

- a. Provide access to activity centers from surrounding neighborhoods.
- b. Provide facilities to connect nearby activity centers.

³ Wheelchair ramp photo: COG/TPB, Access for All Committee

D. Integrate bicycling and walking into the public transportation system.⁴

1. Provide safe and convenient access for pedestrians and bicyclists to all Metro and commuter rail stations and park-and-ride lots.
2. Improve bicycle parking at Metro and commuter rail stations with well-designed racks, covered racks, and lockers. Replace broken and obsolete bicycle racks with current models. Investigate the possibility of improving commuter access to bicycle lockers and increasing usage rates by establishing automated, hourly rental service.
3. Improve the convenience of bringing bicycles on the Metrorail. Evaluate the possibility of allowing reverse commuting with bicycles on Metrorail during rush hours.

All 1,450 Washington region Metrobuses have been equipped with racks to carry up to two bikes per bus

4. Provide bicycle racks on all buses.⁵

5. Provide for accommodation of bicycles on future rail services in the Washington region.

E. Provide adequate bicycle support facilities.

1. Enact zoning laws to require bicycle parking and related facilities as part of all new construction or major renovation, including office, retail, and housing developments.
 - a. Construct bicycle parking facilities in well-traveled and lighted areas. Facilities should be covered and secure.
 - b. Require placement of bicycle parking facilities in convenient locations; short-term parking should be as close as possible to building entrances; long term parking facilities should be located in secure areas.
 - c. Ensure the provision of showers and changing facilities in all new or renovated commercial developments.

⁴ Photo of NY Avenue Metro Bike Lockers: COG/TPB, Michael Farrell

⁵ Photo of Bike on Bus by WABA/Eric Gilliland

2. Provide bicycle parking on public property. Jurisdictions should install bicycle parking in public spaces where there is demand, such as public libraries, parks, and sidewalks near storefront retail.⁶

A keypad-controlled bike cage with racks is very secure

The District of Columbia requires Bicycle Parking in any building with Automobile Parking, and Installs Bike Racks on Public Sidewalks on Request

The Washington, D.C. Department of Transportation has established the following bicycle parking requirements for property owners:

- Bicycle parking is required for office, retail and service uses that provide car parking
- The required number of bike parking spaces is five percent (5%) of the required number of automobile parking spaces
- Bicycle parking must be convenient, secure, and well-lit
- For older buildings, one percent (1%) of the amount of required parking spaces may be converted to bicycle parking spaces
- DDOT offers free technical advice and racks for existing garages and off-street parking lots

3,425 elementary school students in the District of Columbia, Montgomery, and Prince George's Counties were trained in pedestrian and bicycle safety basics in 2004, under a program funded by the Maryland Office of Highway Safety

⁶ Photo of bike cage on Stanford Campus, COG/TPB, Michael Farrell

⁸ Photo of Girl on Bike: WABA

F. Develop pedestrian and bicycle safety education and enforcement programs in all jurisdictions.⁸

1. Promote pedestrian and bicycle safety education programs for children, beginning at the earliest possible age.
 - a. Establish pedestrian and bicycle safety programs at the elementary school level, including classroom and on-bicycle instruction.
 - b. Develop and distribute pedestrian and bicycle safety information materials designed to teach beginning cyclists and young pedestrians.
 - c. Emphasize the use of bicycle helmets as a means of injury reduction, lights after dark, reflectors, and reflective clothing for pedestrians.
2. Improve cycling skills and pedestrian safety habits of adults and young adults.
 - a. Produce and distribute information on bicycle usage and safety.
 - b. Emphasize the use of helmets for rider protection, lights after dark, reflectors, and reflective clothing for pedestrians.
3. Increase motorist awareness and accommodation of bicyclists and pedestrians, and bicyclist and pedestrian awareness and accommodation of motorists.
 - a. Include bicycle and pedestrian information in automobile drivers' training classes, driver's manuals, and license exams, and through the media.
 - b. Coordinate public media campaigns with law enforcement
4. Encourage jurisdictional uniformity of traffic laws relating to bicycling and walking. Encourage conformity with such regulations as the Uniform Vehicle Code.

The regional “Street Smart” Pedestrian and Bicycle Safety Campaign urges motorists to “Stop for Pedestrians”, and pedestrians to “Look Before You Cross”

5. Encourage consistent bicycle law enforcement to assure safe bicycling and walking.
 - a. Emphasize the enforcement of traffic laws dealing with offenses known to cause crashes between bicycles and motor vehicles, such as wrong way bicycling, and ignoring stop signs and stop lights.
 - b. Emphasize enforcement of traffic laws dealing with offenses known to cause crashes between pedestrians and motor vehicles, such as motorists failing to yield to pedestrians, and pedestrians disobeying “Don’t walk” signals.
6. Improve bicycle and pedestrian accident reporting and analysis procedures at the state and regional levels, to provide jurisdictions with a better understanding of accident causes and countermeasures.
7. Provide increased law enforcement presence along regional off-road trail networks and encourage inter-jurisdictional cooperation and coordination to provide for the safety and security of all pedestrians and bicyclists.⁹

*Volunteer Patrols
can help with
Trail Security*

- G. Each jurisdiction should develop a high visibility bicycle or pedestrian project to demonstrate the effectiveness of bicycling and walking as a short distance transportation mode.**
1. Projects should be easily implemented and supported by the community.
 2. Each project should enjoy the full and enthusiastic support of the government agencies responsible for implementation.
 3. Extensive publicity and promotion should be provided for each facility or service included in the project.
 4. An extensive analysis of the effectiveness of each project should be conducted following the demonstration period.

⁹ Photo of bike patrol on the C&O Towpath: COG/TPB, Michael Farrell

- H. The TPB shall compile and report on best practices regarding wayfinding and signage for bicyclists and pedestrians in the Washington region.** This report shall be completed no later than December, 2006. The Bicycle and Pedestrian Subcommittee of the TPB Technical Committee shall explore the creation of pedestrian and bicycle signage and wayfinding guidelines for the Washington region based on current best practices.

Chapter 6

The 2030 Bicycle and Pedestrian Network

The Regional Bicycle and Pedestrian Network in 2030

The *Bicycle and Pedestrian Plan for the National Capital Region* includes approximately 350 bicycle and pedestrian facility improvement projects from across the region. If every project in the plan is implemented, in 2030 the region will have added 223 miles of bicycle lanes and 461 miles of shared-use path. The overall network length (accounting for dual bike lane/sidepath facilities) will increase by 680 miles. In addition, hundreds of miles of signed bicycle routes (with no other improvements beyond signing) will be created. Fifty-five pedestrian intersection improvements will be carried out, and 21 pedestrian/bicycle bridges or tunnels will be built. Two new bicycle and pedestrian crossings over the Potomac will be created, at the American Legion and Woodrow Wilson Bridges, and the bridges over the Anacostia River will be improved for pedestrians and bicyclists. In addition, nineteen major streetscaping projects will improve pedestrian and bicycle access and amenities in places such as Tysons Corner, Bethesda, Ballston, Huntington Metro, Clifton, and Hillsboro. Table 6-1 below summarizes the new facility mileage that will be added by 2030 if this plan is implemented in full.

Table 6-1: Miles of Bicycle/Pedestrian Facilities in the Washington Region			
Facility Type	Total in 2005	Planned New Facilities/Upgrades	Total in 2030
Bicycle Lane	56	223	279
Shared-Use Path	490	461	951
Total	546	684	1230

Cost Estimates

The total cost of improvements listed in the plan is estimated at about \$530 million (2006 dollars). Project-specific cost estimates have been provided by sponsoring agencies for about 35% of the listings (shown for these projects in Appendix A), totaling about \$190 million. Of the \$190 million in identified costs, \$112 million is included in the CLRP.

The remaining 65% of the projects, based upon a global cost per mile or per facility estimate, are projected to cost about \$340 million. See Table 6-2 for costs imputed to projects that had no sponsor cost estimate. Costs estimates for individual projects are not provided because accurate estimates cannot be made at the project level with the information available.

Facility Type	Average Imputed Cost per Mile or per Project	Miles or Number of Projects with Assigned Cost	Imputed Cost
Multi-Use Path	\$1,000	291 miles	\$291,000
Bicycle Lane	\$20	157 miles	\$3,140
Pedestrian/Bicycle Bridge/Tunnel	\$3,000	6 projects	\$18,000
Pedestrian Intersection Improvement	\$500	50 projects	\$25,000
Streetscape	\$2,000	1 project	\$2,000
Total			\$339,140

Explanation of Project listings

Appendix A lists the plan projects, organized alphabetically by state and jurisdiction. Facility type, responsible agencies, limits, length, and cost are also included. Note that due to the nature of bicycle and pedestrian facility improvements, the list in Appendix A is expected to change annually, as projects are added or removed.

The project list is drawn from a database that includes more extensive information, including project status, agency project ID number, facility lengths, facility alignment, description, project status, project web site, date of (projected) completion, date the record was last updated, and project manager name and contact information. Agency staff may enter via a password-protected web site to enter, edit, and delete project information, making the process of keeping the database accurate simple. Over time the database should prove useful in tracking the progress of projects. A sample database entry and a data dictionary are found in Appendix B.

This project list is intended to be a list of significant planned bicycle and pedestrian projects in the Washington region. Agencies were encouraged to submit projects for inclusion if they were one mile or more in length, or cost more than \$300,000. Small sidewalk projects were not included unless they were part of a larger pedestrian or bicycle project.

Figures 6-1 and 6-2 show the location of major bicycle and pedestrian projects throughout the region. All pedestrian/bicycle bridge or tunnel projects, multi-use paths greater than three miles in length, and projects estimated by their sponsors to cost more than \$400,000 are mapped, except for area projects that cannot be mapped in a meaningful way. About a quarter of the plan projects are mapped. Project details can be found in the project list in Appendix A.

Figures 6-3 and 6-4 show the location of major bicycle and pedestrian projects that are included in the CLRP or are funded.

Table 6-3 lists the mapped projects. Project numbers are sequential but not continuous because not all projects are mapped.

Table 6-3: Mapped Bicycle and Pedestrian Projects

Project Number	Project Name	Project Type	CLRP
1	Anacostia Riverwalk Trail	Shared-Use Path	Y

Appendices

Appendix A

Bicycle and Pedestrian Projects

Of the Long-Range Bicycle and Pedestrian Plan
For the National Capital Region

This appendix contains a complete list of the projects in the Bicycle and Pedestrian Plan for the National Capital Region. Below is a guide to the printed project list. Appendix B contains a data dictionary for the electronic database, which contains more information than this printed list, as well as a sample data entry form.

PROJECT LIST DATA DICTIONARY																	
Field	Explanation																
Line Number	Short ID number used to label projects on the maps																
Agency Project ID	The sponsoring agency's project identifying number																
Project Name	Descriptive name provided by the sponsoring agency																
From	Project Limits																
To	Project Limits																
Length (Miles)	Length of the project from start to finish in miles. Example: if a project consists of four miles of road with a continuous bike lane and sidewalk, the project length is four miles. For projects that have no length, such as bicycle racks, the listed length is zero.																
Responsible Agencies	Agencies responsible for implementing the project or otherwise involved																
Bike Lane	Bike lanes are striped lanes at least 4' wide in the public right-of-way, marked for the exclusive use of bicyclists																
Multi-Use Path	A paved or hard-surface path separated from traffic, officially designated for bicycles and other non-motorized users. Should be at least 8' wide.																
Sidewalk	Sidewalks are usually less than 8' wide, and are not designed for bicyclists.																
Type of Spot/Area Improvement	For non-linear projects. The pull-down menu gives the following options: <table border="0" style="margin-left: 40px;"> <thead> <tr> <th style="text-align: left;">Type of Improvement</th> <th style="text-align: left;">Code Letter</th> </tr> </thead> <tbody> <tr> <td>1. Pedestrian Intersection Improvement</td> <td>I</td> </tr> <tr> <td>2. Pedestrian/Bicycle Bridge or Tunnel</td> <td>B</td> </tr> <tr> <td>3. Traffic Calming</td> <td>TC</td> </tr> <tr> <td>4. Streetscape/Pedestrian Improvements</td> <td>S</td> </tr> <tr> <td>5. Bicycle Parking</td> <td>PK</td> </tr> <tr> <td>6. Bicycle Route Marking</td> <td>BR</td> </tr> <tr> <td>7. Other</td> <td>O</td> </tr> </tbody> </table>	Type of Improvement	Code Letter	1. Pedestrian Intersection Improvement	I	2. Pedestrian/Bicycle Bridge or Tunnel	B	3. Traffic Calming	TC	4. Streetscape/Pedestrian Improvements	S	5. Bicycle Parking	PK	6. Bicycle Route Marking	BR	7. Other	O
Type of Improvement	Code Letter																
1. Pedestrian Intersection Improvement	I																
2. Pedestrian/Bicycle Bridge or Tunnel	B																
3. Traffic Calming	TC																
4. Streetscape/Pedestrian Improvements	S																
5. Bicycle Parking	PK																
6. Bicycle Route Marking	BR																
7. Other	O																
In CLRP	Project is in the 2005 Financially Constrained Long-Range Transportation Plan for the National Capital Region, and therefore is officially considered to have funding available to support project completion.																
In TIP	Project is in the most recent National Capital Region Transportation Improvement Program with specific funding amounts identified for program completion.																

Field	Explanation												
Status	<p>The pull-down menu offers the following options:</p> <table border="0" style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: right;"><u>Code Letter</u></th> </tr> </thead> <tbody> <tr> <td>1. Fully Funded¹</td> <td style="text-align: right;">F</td> </tr> <tr> <td>2. Partially Funded</td> <td style="text-align: right;">P</td> </tr> <tr> <td>3. Unfunded</td> <td style="text-align: right;">U</td> </tr> <tr> <td>4. Under Construction</td> <td style="text-align: right;">UC</td> </tr> <tr> <td>5. Complete*</td> <td style="text-align: right;">C</td> </tr> </tbody> </table>		<u>Code Letter</u>	1. Fully Funded ¹	F	2. Partially Funded	P	3. Unfunded	U	4. Under Construction	UC	5. Complete*	C
	<u>Code Letter</u>												
1. Fully Funded ¹	F												
2. Partially Funded	P												
3. Unfunded	U												
4. Under Construction	UC												
5. Complete*	C												
Cost	<p>In thousands of dollars. As many projects in the plan may not be built for many years, and have not been fully scoped, this can be a very rough estimate. If a project is part of a larger project the total project cost is <i>not</i> listed, only that portion of the cost which is attributable to the bicycle or pedestrian facility. Use of a rule of thumb for such estimates was acceptable, i.e. 3% of total project cost. Many projects do not have a cost estimate available.</p>												

* This database is mean to list planned facilities rather than existing facilities, but as time passes many projects in it will be completed.

¹ “Funded” indicates that the sponsoring agency has considered funding for completion of this project to be reasonably available within projected funding sources. “Unfunded” indicates, that while the project has been identified, there is no projected funding to support its completion at this time.

2006 Bike/Ped Plan Project List

Project ID	Project/Facility Name	From	To	Length (Miles)	Responsible Agencies	Bike Lane	Path	Side walk	Spot/Area	In CLRP	In TIP	Status	Cost (\$1,000s)

Appendix B

Data Dictionary and Sample Database Entry Form

For the Regional Database of Bicycle and Pedestrian Projects in the Long-Range
Bicycle and Pedestrian Plan for the National Capital Region

FIELD	EXPLANATION
COG Project ID	COG's internal identifying number for the project in this database
Agency Project ID	The responsible agency's project identifying number
Project Name	Descriptive name provided by the sponsoring agency
From	Project Limits
To	Project Limits
Length of Project	Length of the project from start to finish. Example: if a project consists of four miles of road with a continuous bike lane and sidewalk, the project length is four miles.
Jurisdiction(s)	Jurisdiction(s) in which the project is located
State	State or States in which the project is located.
Agency	Lead agency that is responsible for implementing the project
Secondary Agency	Other agency involved in the project
Cost	In thousands of dollars. As many projects in the plan may not be built for many years, and have not been fully scoped, this can be a very rough estimate. If a project is part of a larger project the total project cost is <i>not</i> listed, only that portion of the cost which is attributable to the bicycle or pedestrian facility. Use of a rule of thumb for such estimates was acceptable, i.e. 3% of total project cost. Many projects do not have a cost estimate available.
URL for more project information	If the project has a web site, or if the agency has more detail on its web site, the URL may be listed.
Project Manager Name	If the project has a project manager, his or her name may be listed.
Project Manager's Phone	
Project Manager's E-mail	
Project is in the CLRP	Project is in the 2005 Financially Constrained Long-Range Transportation Plan for the National Capital Region, and therefore is officially considered to have funding available to support project completion.
Project is in the TIP	Project is in the most recent National Capital Region Transportation Improvement Program with specific funding amounts identified for program completion.

Project is Part of a Larger Project	Is the project part of a larger project, i.e. a highway, bridge, or transit project?																
Length of Bike Lane	Bike lanes are striped lanes at least 4' wide in the public right-of-way, marked for the exclusive use of bicyclists. If a bike lane is found on both sides of the street for four miles, it should be reported as four miles of bike lane, not eight.																
Length of Multi-Use Path	A paved or hard-surface path separated from traffic, officially designated for bicycles and other non-motorized users. Should be at least 8' wide.																
Length of Sidewalk	Sidewalks are usually concrete, less than 8' wide, and have other design characteristics (street furniture, limited sight-lines) that render them unsuitable for all but the slowest bicyclists.																
Type of Spot/Area Improvement	For non-linear projects. The pull-down menu gives the following options: <table border="0" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th style="text-align: left;"><u>Type of Improvement</u></th> <th style="text-align: left;"><u>Code Letter</u></th> </tr> </thead> <tbody> <tr> <td>1. Pedestrian Intersection Improvement</td> <td>I</td> </tr> <tr> <td>2. Pedestrian/Bicycle Bridge or Tunnel</td> <td>B</td> </tr> <tr> <td>3. Traffic Calming</td> <td>TC</td> </tr> <tr> <td>4. Streetscape/Pedestrian Improvements</td> <td>S</td> </tr> <tr> <td>5. Bicycle Parking</td> <td>P</td> </tr> <tr> <td>6. Bicycle Route Marking</td> <td>BR</td> </tr> <tr> <td>7. Other</td> <td>O</td> </tr> </tbody> </table>	<u>Type of Improvement</u>	<u>Code Letter</u>	1. Pedestrian Intersection Improvement	I	2. Pedestrian/Bicycle Bridge or Tunnel	B	3. Traffic Calming	TC	4. Streetscape/Pedestrian Improvements	S	5. Bicycle Parking	P	6. Bicycle Route Marking	BR	7. Other	O
<u>Type of Improvement</u>	<u>Code Letter</u>																
1. Pedestrian Intersection Improvement	I																
2. Pedestrian/Bicycle Bridge or Tunnel	B																
3. Traffic Calming	TC																
4. Streetscape/Pedestrian Improvements	S																
5. Bicycle Parking	P																
6. Bicycle Route Marking	BR																
7. Other	O																
Path Alignment	Is the multi-use path along a road, or is it on its own right-of-way? This field is meant to distinguish between side-paths, which are built adjacent to a road and cross numerous driveways and intersections, and a multi-use path on its own right of way, such as an old railroad, canal tow-path, or stream valley. Paths built along limited-access highways and parkways such as the Mount Vernon Trail should be listed as being built on an independent route, since they have few intersection or driveway conflicts, and are set back some distance from the roadway for most of their length.																
Status	The pull-down menu offers the following options: <table border="0" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th style="text-align: left;"><u>Code Letter</u></th> </tr> </thead> <tbody> <tr> <td>1. Fully Funded¹</td> <td>F</td> </tr> <tr> <td>2. Partially Funded</td> <td>P</td> </tr> <tr> <td>3. Unfunded</td> <td>U</td> </tr> <tr> <td>4. Under Construction</td> <td>UC</td> </tr> <tr> <td>5. 	<u>Code Letter</u>																
1. Fully Funded ¹	F																
2. Partially Funded	P																
3. Unfunded	U																
4. Under Construction	UC																
5. Complete	C																

¹ "Funded" indicates that the sponsoring agency has considered funding for completion of this project to be reasonably available within projected funding sources. "Unfunded" indicates, that while the project has been identified, there is no projected funding to support its completion at this time.

	This database is mean to list planned facilities rather than existing facilities, but as time passes many projects in it will be completed.
Year of Completion or Implementation	If the project has been completed or implemented, in what year did that happen?
Project Within a Regional Activity Center	Is the project located with in a regional activity center or cluster? See the link for on-line information on activity centers and clusters. A paper map of centers and clusters, which is easier to read than the one on the web, will be sent to anyone who requests one.
Project is Between Regional Activity Centers	Project connects one regional activity center or cluster with another
Maintenance	Project is primarily maintenance or reconstruction of an existing facility
Project Connects to a Transit Facility	Project connects to a metrorail station, commuter rail station, or transit center
BikeNetConnect	Bicycle Network Connectivity. Does the project improve the connectivity of the regional bicycle network? Does it connect to any existing bicycle facilities?
Pedestrian Safety Project	Is the primary purpose of this project to improve pedestrian safety?
Project Identified as a 2005 Regional Priority*	Is the project one of the regional priority unfunded bicycle and pedestrian projects recommended by the Transportation Planning Board for consideration in the TIP? (The most recent list, with descriptions, is shown below)

Appendix C
Bicycle and Pedestrian Projects
In the 2005 CLRP

2005 CLRP Bicycle and Pedestrian Project List

Facility	From	To	Complete In	Cost (\$1,000s)
District of Columbia				
District-wide Bicycle Management Program	Bicycle racks, lanes and bicycle signs		2010	\$800
Watts Branch				\$400
Upper Rock Creek Trail Study			2007	\$1,000
Union Station Bike Station			2006	\$500
Oxon Run Trail Restoration			2007	\$500
Farragut Station Pedestrian Tunnel			2007	\$100
National Recreational Trails			2012	\$180
Kingman Island Trail Construction	Two island in the Anacostia River south (downstream)	Benning Road in Ward 7	2005	\$600
Rock Creek Park Trail			2007	\$2,000
Anacostia Riverwalk Trail	Benning Road to Naval Yard (West Side of River)	Bladensburg Trail to Naval Annex (East Side of River)	2012	\$14,400
Rose Park				\$300
Metropolitan Branch Trail			2009	\$12,500
East Entrance Foggy Bottom			2007	\$100
Cultural/Heritage Trail System	Citywide		2007	\$400
Maryland				
North Bethesda Trail Bridges	crossings of I-495 and I-270		2004	\$5,313
Old Columbia Pike	E. Randolph Road	MD 198	2005	\$2,847
Annual Bikeway Program	countywide			\$2,944
Forest Glen Pedestrian Bridges	west side of Georgia Avenue at Locust Grove Road	west side of Georgia Avenue at Forest Glen Road	2006	\$7,709
North Bethesda Trail	Twinbrook Metro Station	Norfolk/Rugby Ave. intersection (Bethesda)	2005	\$1,470
Mathew Henson Trail	Rock Creek Trail (west of Viers Mill Road)	Alderton Lane	2007	\$4,570
Metropolitan Branch Trail	Silver Spring Metro/Transit Center	Montgomery College Campus in Takoma Park	2007	\$5,300
Silver Spring Green Trail	Silver Spring Metro Station	Sligo Creek Hiker-Biker Trail	2007	\$6,060
Pedestrian Safety Program				\$1,200
Annual Sidewalk Program	countywide			\$7,800
Greentree Road Sidewalk	Old Georgetown Road	Fernwood Road	2009	\$1,788
Shady Grove Access Bike Path	Shady Grove Road	Redland Road	2008	\$2,714
US 29 Sidewalks	University Boulevard	New Hampshire Avenue	2006	\$3,820
Bethesda Bikeway and Pedestrian Facilities	Bethesda CBD		2008	\$3,340
Virginia				
Arlington Boulevard Ped and Bike Trail	Fairfax County Line	N. Meade Street	2025	\$735
Sidewalk Construction	City of Alexandria	City-wide	2007	\$938
Route 50 Pedestrian Improvements	Jaguar Trail	Patrick Henry Drive	2025	\$2,800
Sidewalks and Trails	Town of Hamilton			
VA 123 Bike Path	VA 120	Fairfax County Line	2015	\$3,600
W&OD Trail Extension	W&OD Trail End (Purcellville)	Bluemont	2025	\$1,800
Pedestrian/Bicycle Plaza & Pathways - Phase II	Town of Clifton			\$158
Manassas Drive	Western City Limit	Fairway Court		
Ped and Bike Improvements	in the Town of Occoquan			

Facility	From	To	Complete In	Cost (\$1,000s)
VA 237 (Washington Blvd.)	Sycamore Street	Arlington Boulevard	2015	\$2,000
Pedestrian Bridge over CSX Railroad	@ Veterans Memorial Park	DOT #860626C	2003	\$2,225
10th St. Pedestrian Facilities	Wilson Blvd.	Washington Blvd.	2007	\$500
Duke Street Ped Bridge	Near Cameron Station		2006	\$525
Bike and Ped Trails and Sidewalks	City of Alexandria			\$834
Metro Station (King Street)	City of Alexandria		2007	\$15,000
Trails/Sidewalks	County-wide		2006	\$2,037
Purcellville Multi-Purpose Trail	Main Street	Hirst Drive	2006	\$460
Sugarland Run Trail	W&OD Trail	VA 7	2025	\$700
Courthouse Metro Station			2007	\$2,060
Hunter Mill Road Bikeway	VA 123	VA 7	2025	\$400
Ped & Bike Path Network	Town of Lovettsville			\$422
Sidewalks and Trails	in the Town of Quantico			
Herndon Trail to Dulles Rail	Herndon @ Van Buren / Worldgate Intersection	Herndon - Monroe Dulles Rail Station	2010	\$425
W&OD Trail Crossing Improvements	Town of Herndon	Crestview Drive, Ferndale Avenue, Grace Street, etc.	2008	\$300
Town of Haymarket Streetscaping			2007	\$999
Town of Herndon	Town Hall Square	Streetscaping & bike / ped improvements	2008	\$774
VA 237 (Fairfax Dr.)	Courthouse Rd.	Ft. Myer Dr.	2004	\$500
Lorcom Lane	@ N. Randolph St.		2003	\$350
W&OD Trail Connector	W&OD Trail @ Leesburg	Whites Ferry/Potomac River	2025	\$800
George Washington Parkway Crossing	Mt. Vernon Bike/Ped Trail	Potomac Yard	2008	\$1,000
Accotink Gateway Connector Trail	Daniel's Run	Pickett Road		\$1,093
Bike and Ped Trails and Sidewalks	Various Locations - 2 Transit Stations &	4 Regional Malls		
VA 234 Business	City of Manassas WCL (Godwin Drive)	I-66		
Route 28 Trail Extension	Fauquier Co. Line	US 29 (Centreville)	2010	\$900
Sidewalks and Trails	City of Fairfax		2006	
Sidewalks, Trails, and Paths	County-wide	Prince William County		
Springfield to Tysons Corner Trail	Springfield	Tysons Corner	2025	\$1,500
Alex.'s Union Station / King Street Metrorail Station			2004	\$375
Rosslyn Circle Bike/Ped Grade Separation			2004	\$1,250
Old Town Manassas City Square, Walkways, & Cross			2004	\$313
US 50 Interstate Bicycle Route	Fauquier Co. Line	DC Line	2025	\$3,200
Pedestrian, Bicycle, and Transit Improvements	Arlington County,		2004	\$650
Sidewalks, Trails, and Paths	County-wide			
US 29 Trail	Fauquier Co. Line	WCL of City of Fairfax	2010	\$800
26th St. N.	Vermont	Yorktown	2010	\$450
Wolf Trap National Park Pedestrian Crossing	Wolf Trap National Park	VA 675 (Beulah Road)	2007	\$750
Old Dominion Drive (VA 309) (Pedestrian & Bicycle Im	Fairfax County Line	US 29 (Lee Highway)	2005	\$1,560
Multi-Use Trails in Arlington County	County-wide			\$1,200

Appendix E

Completed Bicycle and Pedestrian Projects
From the Previous Bicycle Plan
For the National Capital Region

Old #	State	Project	Limits/ Description	Jurisdiction	Funding Agency	Est. Cost (thous)	Status/ Comments
1d	VA	W&OD Trail Bypass	Construct bypass from W&OD Trail near Bluemont Park	ARL	ARL, NVRPA	125	Complete
3k	VA	Chain Bridge Trail	Widen sidewalks	ARL	ARL		Complete
3o	VA	Columbia Pike/Pentagon Area Trails	1)Construct bikeway linking Columbia Pike and southern Arlington to Mt. Vernon 2) widen sidewalk along Washington Blvd between Sycamore Street and Glebe Road	ARL	DOD, ARL	550	
5l	VA	Arlington Commercial Area Bicycle Parking	An estimated 250 racks to be installed	ARL	ARL	40	Complete
4c	VA	Alexandria/Fairfax Beltway Crossing	Bicinity of Eisenhower Avenue and Clermont Drive	ALX, FFX	ARL, FFX, VA	150	Complete
1a	DC	Mall Trail Improvements	Washington Mall	DC	DC, NPS, ARCH	500	Complete
3a	DC	Capital Crescent Trail	Georgetown to DC Line	DC	DC, NPS	11800	Complete
6i	DC/MD/VA	Metro Bike-On-Rail	System wide policy	DC, MD, VA	DC, WMATA		Complete
3am/2000	VA	Gateway-Accotink Connector	Trail from Daniel's Run in Fairfax City to Pickett Rd.in Fairfax City to Lake Accotink	FFX	FFX		Mostly Complete
3v	VA	Fairfax Parkway Bikeway	Last 6 miles of multi-use trail adjacent to Fairfax County Parkway	FFX	FFX	1000	Partly Complete

6e	MD	Georgetown Branch Trail		MC	MD, MC		Complete
6m	MD	Bethesda Trolley Trail	Construct missing portions of bicycle network to NIH and White Flint Metro Stations	MC	MC, MD, FHWA	1720	Partly Complete. Two bridges built
New 2000	MD	Gude Drive to Rock Creek Park Trail	Connect Gude Dr (part of the bicycle beltway) with the Rock Creek Trail near the former Montgomery County Landfill	MC	RVL/MNCP PC	150	
3f	VA	Sligo Creek Trail Extension	Link trail with NW Branch, Long Branch, and Anacostia Trails	MC, PGC	MC, NPS, PGC	183	Complete
3g	VA	Northwest Branch Trail	Complete missing trail sections	PGC	NPS, PGC	200	Complete
3h	VA	Northeast Branch		PGC	PGC		Complete
6j	MD	Annapolis Rd. - Rte 450 Trail	Anne Arundel Co. Line to New Carrollton Metro Station	PGC	PGC, MD	1500	under construction
6o	MD	Cherrywood Lane Metro Extension	Construct bike lanes to connect Cherrywood Lane to Metro	PGC	PGC, MD		Complete
7h	MD	Wash. Balto. Annap	Trail on WB&A line ROW from Glenarden to Anne Arundel Co.	PGC	PGC		Complete. Does not extend into Anne Arundel County
7j	MD	College Park Trolley Trail	Construct a trail along the abandoned Hyattsville-College Park-Laurel trolley right of way				Phase I complete, from Greenbelt to Paint Branch Parkway
2p	VA	Old Bridge Corridor Enhancement Project	Paved shoulders and/or separate path along Old Bridge Rd., Davis Ford Rd. and Prince William Pkwy.	PW	PW	375	complete

7v	VA	Old Bridge Road Trail	Construct trail to connect Rte 1 to Lake Ridge, Tacketts Mill to PW Parkway	PW	PWC, VA	366	
New 2000	VA	Prince William Parkway			PWC, VA	Funded/complete since 1995

NOTES:

Blank spaces indicate a value of zero.

All lockers listed are owned by the Washington Metropolitan Area Transit Authority (WMATA).

Locker usage data is current as of May 23, 2006, and are subject to change.

Totals include racks not owned by WMATA; such racks are located within 200 feet of a station entrance.

Locker and rack totals are current as of May 22, 2006, and are subject to change.

Advocacy group for cycling in the Washington region. Runs a pedestrian and bicycle safety education program.

Appendix K

Glossary of Terms

- BIKE-ON-RAIL PERMIT** Permit issued by the Washington Metropolitan Area Transit Authority permitting transportation of bicycles on Metrorail trains during night and weekend service periods. (no longer required)
- BICYCLE LANE (BIKE LANE)** A portion of a roadway which has been designated by striping, signing and pavement markings for the preferential or exclusive use of bicyclists. Consists of a 4'-6' lane in each direction, with bicycle traffic moving in the same direction as motorized traffic.
- BICYCLE PATH (BIKE PATH)** A bikeway physically separated from motorized vehicular traffic by an open space or barrier and either within the highway right of way or within an independent right of way.
- BICYCLE PARKING** An area dedicated and designed specifically for storing and locking a bicycle. Includes bicycle racks and bicycle lockers.
- BICYCLE ROUTE (BIKE ROUTE)** A segment of a system of bikeways designated by the jurisdiction with appropriate directional and informational markers, with or without specific bicycle route numbers.
- BIKEWAY** Any road, path, or way which in some manner is specifically designated as being open to bicycle travel, regardless of whether such facilities are designated for the exclusive use of bicycles or are to be shared with other transportation modes.
- CLASS I, II or III BIKEWAY** Terms sometimes used to describe different types of bicycle facilities. Class I is a shared-use path, Class II a bicycle lane, and Class III a shared roadway. However, Since there is some disagreement on the exact meaning of these terms, the AASHTO terms (listed above) should be used.

GREENWAY	A linear park or recreation facility of limited width, located along the length of an existing or former public utility or railroad right-of-way, or along a stream bed.
HIKER-BIKER TRAIL	A paved path designed for use by both pedestrians and bicyclists, which is completely separated from vehicular traffic.
METROPOLITAN STATISTICAL AREA	A core area containing a substantial population nucleus, together with adjacent communities having a high degree of social and economic integration with that core. Metropolitan statistical areas comprise one or more entire counties. They are used by the United States Census for the purpose of tabulating, enumerating and publishing data.
RAILS-TO-TRAILS CONSERVANCY	A national membership organization that works to facilitate the acquisition of abandoned railroad lines for use in creating bicycle and pedestrian trails and linear parks.
RAIL-TRAIL	A Shared-Use Path, either paved or unpaved, built within the right-of-way of an existing or former railroad.
REGIONAL ACTIVITY CENTER	A set of locations within the National Capital Region Transportation Planning Board planning area identified by the Council of Government's Planning Director's Technical Advisory Committee as employment centers of regional significance. Five types of Regional Activity Center have been designated, with different employment and residential density criteria for each.
REGIONAL ACTIVITY CLUSTER	An employment center adjacent to a Regional Activity Center, with a lower density than a Regional Activity Center
SHARED ROADWAY	A roadway which is open to both bicycle and motor vehicle travel. This may be an existing roadway, street with wide curb lanes, or road with paved shoulders.
SHARED-USE PATH	A bikeway, at least 8' in width, physically separated from motorized vehicular traffic by an open space or barrier and either within the highway right-of-way or within an independent right-of-way. Shared-Use Paths may also be used by pedestrians, skaters, wheelchair users, joggers, and other non-motorized users.

SIDE-PATH	A shared-used path built within the right-of-way of a non limited-access highway.
SIDEWALK	The portion of a street or highway right-of-way, at least 4' in width, designed for preferential or exclusive use by pedestrians.
SIGNED SHARED ROADWAY	A shared roadway that has been designated as a preferred route for bicycle use using warning, directional, and informational signage.
TRAVELED WAY	The portion of a roadway for the movement of vehicles, exclusive of shoulders.
UNIFORM VEHICLE CODE	The standards for traffic regulations recommended for adoption by state and local jurisdictions, as prepared by the National Committee on Uniform Traffic Laws and Ordinances.
WASHINGTON AREA BICYCLIST ASSOCIATION	A regional membership organization devoted to improving bicycling opportunities and promoting bicycle usage in the metropolitan Washington area.
